The Illinois Municipal Brownfields Redevelopment Grant Program (MBRGP) offers grants worth a maximum of \$240,000 each to municipalities to assist in site investigation activities, development of cleanup objectives, and performance of cleanup activities. Brownfields are abandoned or underused industrial and/or commercial properties that are contaminated (or thought to be contaminated) and have an active potential for redevelopment.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Homes & Centers Listing

Source: Department of Children & Family Services

Telephone: 312-814-4150

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/31/2010	Source: EPA

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/30/2010	Source: EPA
Date Data Arrived at EDR: 12/30/2010	Telephone: 703-412-9810
Date Made Active in Reports: 02/25/2011	Last EDR Contact: 03/01/2011
Number of Days to Update: 57	Next Scheduled EDR Contact: 06/13/2011

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695

State- and tribal - equivalent NPL

CAT: Category List

Sites on this list are: Notice of Response Action, NPL, Pre/proposed NPL, Completed Remedial Action, Site Remediation Program, Federal Facilities, and Cleanup Started and/or Completed Sites.

Date of Government Version: 06/01/1997	Source: Illinois EPA
Date Data Arrived at EDR: 07/07/1997	Telephone: N/A
Date Made Active in Reports: 08/14/1997	Last EDR Contact: 02/26/2001
Number of Days to Update: 38	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

State- and tribal - equivalent CERCLIS

SHWS: State Oversight List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 11/29/2010	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 12/09/2010	Telephone: 217-524-4826
Date Made Active in Reports: 12/17/2010	Last EDR Contact: 01/31/2011
Number of Days to Update: 8	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Semi-Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

State and tribal landfill and/or solid waste disposal site lists

LF WMRC: Waste Management & Research Center Landfill Database

The Waste Management & Research Center Landfill Database includes records from the Department of Public Health, Department of Mines & Minerals, Illinois Environmental Protection Agency, State Geological Survey, Northeastern Illinois Planning Commission and Pollution Control Board.

Date of Government Version: 12/31/2001	Source: Department of Natural Resources
Date Data Arrived at EDR: 10/06/2006	Telephone: 217-333-8940
Date Made Active in Reports: 11/06/2006	Last EDR Contact: 09/18/2009
Number of Days to Update: 31	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: No Update Planned

SWF/LF: Available Disposal for Solid Waste in Illinois - Solid Waste Landfills Subject to State Surcharge

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/31/2008	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2010	Telephone: 217-785-8604

Number of Days to Update: 36	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Annually

LF SPECIAL WASTE: Special Waste Site List

These landfills, as of January 1, 1990, accept non-hazardous special waste pursuant to the Illinois EPA Non-Hazardous Special Waste Definition. List A includes landfills that may receive any non-hazardous waste, Non-Regional Pollution Control Facilities are so noted. List B includes landfills designed to receive specific non-hazardous wastes. List B landfills are designated as a Regional Pollution Control Facility by RPCF, or Non-Regional Pollution Control Facility by Non-RPCF.

Date of Government Version: 01/01/1990	Source: Illinois EPA

LUST TRUST: Underground Storage Tank Fund Payment Priority List

In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

Date of Government Version: 01/14/2011	Source: Illinois EPA

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UIC: Underground Injection Wells

Injection wells are used for disposal of fluids by "injection" into the subsurface. The construction of injection wells range from very technical designs with twenty-four hour monitoring to simply a hole dug in the ground to control runoff. As a result of this diversity, the UIC Program divides injection wells into five different classes.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 01/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/31/2010	Source: EPA

Date Made Active in Reports: 01/28/2011	Last EDR Contact: 01/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/30/2010	Source: EPA
Date Data Arrived at EDR: 12/30/2010	Telephone: 703-412-9810
Date Made Active in Reports: 02/25/2011	Last EDR Contact: 03/01/2011
Number of Days to Update: 57	Next Scheduled EDR Contact: 06/13/2011
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA's Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011	Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 01/11/2011

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/28/2010	Source: EPA
Date Data Arrived at EDR: 12/01/2010	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/17/2010

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010
Date Made Active in Reports: 05/17/2010

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010
Date Made Active in Reports: 05/17/2010

Telephone: 312-886-6186
Last EDR Contact: 01/06/2011
Next Scheduled EDR Contact: 04/18/2011
Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2010	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/07/2011	Telephone: 202-267-2180
Date Made Active in Reports: 03/21/2011	Last EDR Contact: 01/07/2011
Number of Days to Update: 73	Next Scheduled EDR Contact: 04/18/2011

State- and tribal - equivalent NPL

CAT: Category List

Sites on this list are: Notice of Response Action, NPL, Pre/proposed NPL, Completed Remedial Action, Site Remediation Program, Federal Facilities, and Cleanup Started and/or Completed Sites.

Date of Government Version: 06/01/1997	Source: Illinois EPA
Date Data Arrived at EDR: 07/07/1997	Telephone: N/A
Date Made Active in Reports: 08/14/1997	Last EDR Contact: 02/26/2001
Number of Days to Update: 38	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

State- and tribal - equivalent CERCLIS

SHWS: State Oversight List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 11/29/2010	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 12/09/2010	Telephone: 217-524-4826
Date Made Active in Reports: 12/17/2010	Last EDR Contact: 01/31/2011
Number of Days to Update: 8	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Semi-Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

State and tribal landfill and/or solid waste disposal site lists

LF WMRC: Waste Management & Research Center Landfill Database

The Waste Management & Research Center Landfill Database includes records from the Department of Public Health, Department of Mines & Minerals, Illinois Environmental Protection Agency, State Geological Survey, Northeastern Illinois Planning Commission and Pollution Control Board.

Date of Government Version: 12/31/2001	Source: Department of Natural Resources
Date Data Arrived at EDR: 10/06/2006	Telephone: 217-333-8940
Date Made Active in Reports: 11/06/2006	Last EDR Contact: 09/18/2009
Number of Days to Update: 31	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: No Update Planned

SWF/LF: Available Disposal for Solid Waste in Illinois - Solid Waste Landfills Subject to State Surcharge

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/31/2008	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2010	Telephone: 217-785-8604

	Data Release Frequency: Annually

LF SPECIAL WASTE: Special Waste Site List

These landfills, as of January 1, 1990, accept non-hazardous special waste pursuant to the Illinois EPA Non-Hazardous Special Waste Definition. List A includes landfills that may receive any non-hazardous waste, Non-Regional Pollution Control Facilities are so noted. List B includes landfills designed to receive specific non-hazardous wastes. List B landfills are designated as a Regional Pollution Control Facility by RPCF, or Non-Regional Pollution Control Facility by Non-RPCF.

LUST TRUST: Underground Storage Tank Fund Payment Priority List

In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 01/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/30/2010	Source: EPA
Date Data Arrived at EDR: 12/30/2010	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010
Date Made Active in Reports: 05/17/2010
Number of Days to Update: 87

Next Scheduled EDR Contact: 04/18/2011
Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010
Date Made Active in Reports: 05/17/2010

Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2010	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/07/2011	Telephone: 202-267-2180
Date Made Active in Reports: 03/21/2011	Last EDR Contact: 01/07/2011
Number of Days to Update: 73	Next Scheduled EDR Contact: 04/18/2011
	Data Release Frequency: Annually

State- and tribal - equivalent NPL

CAT: Category List

Sites on this list are: Notice of Response Action, NPL, Pre/proposed NPL, Completed Remedial Action, Site Remediation Program, Federal Facilities, and Cleanup Started and/or Completed Sites.

Date of Government Version: 06/01/1997	Source: Illinois EPA
Date Data Arrived at EDR: 07/07/1997	Telephone: N/A
Date Made Active in Reports: 08/14/1997	Last EDR Contact: 02/26/2001
Number of Days to Update: 38	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

State- and tribal - equivalent CERCLIS

SHWS: State Oversight List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 11/29/2010	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 12/09/2010	Telephone: 217-524-4826
Date Made Active in Reports: 12/17/2010	Last EDR Contact: 01/31/2011
Number of Days to Update: 8	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Semi-Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

State and tribal landfill and/or solid waste disposal site lists

LF WMRC: Waste Management & Research Center Landfill Database

The Waste Management & Research Center Landfill Database includes records from the Department of Public Health, Department of Mines & Minerals, Illinois Environmental Protection Agency, State Geological Survey, Northeastern Illinois Planning Commission and Pollution Control Board.

Date of Government Version: 12/31/2001	Source: Department of Natural Resources
Date Data Arrived at EDR: 10/06/2006	Telephone: 217-333-8940
Date Made Active in Reports: 11/06/2006	Last EDR Contact: 09/18/2009
Number of Days to Update: 31	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: No Update Planned

SWF/LF: Available Disposal for Solid Waste in Illinois - Solid Waste Landfills Subject to State Surcharge

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/31/2008	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2010	Telephone: 217-785-8604
Date Made Active in Reports: 04/07/2010	Last EDR Contact: 02/04/2011
Number of Days to Update: 36	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Annually

LF SPECIAL WASTE: Special Waste Site List

These landfills, as of January 1, 1990, accept non-hazardous special waste pursuant to the Illinois EPA Non-Hazardous Special Waste Definition. List A includes landfills that may receive any non-hazardous waste, Non-Regional Pollution Control Facilities are so noted. List B includes landfills designed to receive specific non-hazardous wastes. List B landfills are designated as a Regional Pollution Control Facility by RPCF, or Non-Regional Pollution Control Facility by Non-RPCF.

Date of Government Version: 01/01/1990	Source: Illinois EPA
Date Data Arrived at EDR: 06/17/2009	Telephone: 217-782-9288
Date Made Active in Reports: 07/15/2009	Last EDR Contact: 06/10/2009
Number of Days to Update: 28	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

IL NIPC: Solid Waste Landfill Inventory

Solid Waste Landfill Inventory. NIPC is an inventory of active and inactive solid waste disposal sites, based on state, local government and historical archive data. Included are numerous sites which previously had never been identified largely because there was no obligation to register such sites prior to 1971.

Date of Government Version: 08/01/1988	Source: Northeastern Illinois Planning Commission
Date Data Arrived at EDR: 08/01/1994	Telephone: 312-454-0400
Date Made Active in Reports: 08/12/1994	Last EDR Contact: 05/23/2006
Number of Days to Update: 11	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

CCDD: Clean Construction or Demolition Debris

Construction and demolition (C and D) debris is nonhazardous, uncontaminated material resulting from construction, remodeling, repair, or demolition of utilities, structures, and roads.

Date of Government Version: 01/10/2011	Source: Illinois EPA
Date Data Arrived at EDR: 02/03/2011	Telephone: 217-524-3300
Date Made Active in Reports: 02/17/2011	Last EDR Contact: 01/31/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Varies

State and tribal leaking storage tank lists

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LUST: Leaking Underground Storage Tank Sites

Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 01/21/2011	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 02/01/2011	Telephone: 217-782-6762
Date Made Active in Reports: 02/17/2011	Last EDR Contact: 03/10/2011
Number of Days to Update: 16	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Semi-Annually

LUST TRUST: Underground Storage Tank Fund Payment Priority List

In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/03/2010

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Homes & Centers Listing

Source: Department of Children & Family Services

Telephone: 312-814-4150

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites

EXECUTIVE SUMMARY

may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Illinois Environmental Protection Agency's Category List.

A review of the SHWS list, as provided by EDR, and dated 11/29/2010 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/31/2010	Source: EPA

Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/31/2010	Source: EPA

Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/30/2010	Source: EPA
Date Data Arrived at EDR: 12/30/2010	Telephone: 703-412-9810

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA's Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011	Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 01/11/2011
Number of Days to Update: 36	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/17/2010

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2010	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/07/2011	Telephone: 202-267-2180

State- and tribal - equivalent NPL

CAT: Category List

Sites on this list are: Notice of Response Action, NPL, Pre/proposed NPL, Completed Remedial Action, Site Remediation Program, Federal Facilities, and Cleanup Started and/or Completed Sites.

Date of Government Version: 06/01/1997	Source: Illinois EPA
Date Data Arrived at EDR: 07/07/1997	Telephone: N/A
Date Made Active in Reports: 08/14/1997	Last EDR Contact: 02/26/2001
Number of Days to Update: 38	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

State- and tribal - equivalent CERCLIS

SHWS: State Oversight List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 11/29/2010	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 12/09/2010	Telephone: 217-524-4826
Date Made Active in Reports: 12/17/2010	Last EDR Contact: 01/31/2011
Number of Days to Update: 8	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Semi-Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

State and tribal landfill and/or solid waste disposal site lists

LF WMRC: Waste Management & Research Center Landfill Database

The Waste Management & Research Center Landfill Database includes records from the Department of Public Health, Department of Mines & Minerals, Illinois Environmental Protection Agency, State Geological Survey, Northeastern Illinois Planning Commission and Pollution Control Board.

Date of Government Version: 12/31/2001	Source: Department of Natural Resources
Date Data Arrived at EDR: 10/06/2006	Telephone: 217-333-8940
Date Made Active in Reports: 11/06/2006	Last EDR Contact: 09/18/2009
Number of Days to Update: 31	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: No Update Planned

SWF/LF: Available Disposal for Solid Waste in Illinois - Solid Waste Landfills Subject to State Surcharge

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/31/2008	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2010	Telephone: 217-785-8604
Date Made Active in Reports: 04/07/2010	Last EDR Contact: 02/04/2011
Number of Days to Update: 36	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Annually

LF SPECIAL WASTE: Special Waste Site List

These landfills, as of January 1, 1990, accept non-hazardous special waste pursuant to the Illinois EPA Non-Hazardous Special Waste Definition. List A includes landfills that may receive any non-hazardous waste, Non-Regional Pollution Control Facilities are so noted. List B includes landfills designed to receive specific non-hazardous wastes. List B landfills are designated as a Regional Pollution Control Facility by RPCF, or Non-Regional Pollution Control Facility by Non-RPCF.

Date of Government Version: 01/01/1990	Source: Illinois EPA
Date Data Arrived at EDR: 06/17/2009	Telephone: 217-782-9288
Date Made Active in Reports: 07/15/2009	Last EDR Contact: 06/10/2009
Number of Days to Update: 28	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

IL NIPC: Solid Waste Landfill Inventory

Solid Waste Landfill Inventory. NIPC is an inventory of active and inactive solid waste disposal sites, based on state, local government and historical archive data. Included are numerous sites which previously had never been identified largely because there was no obligation to register such sites prior to 1971.

Date of Government Version: 08/01/1988	Source: Northeastern Illinois Planning Commission
Date Data Arrived at EDR: 08/01/1994	Telephone: 312-454-0400
Date Made Active in Reports: 08/12/1994	Last EDR Contact: 05/23/2006
Number of Days to Update: 11	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

CCDD: Clean Construction or Demolition Debris

Construction and demolition (C and D) debris is nonhazardous, uncontaminated material resulting from construction, remodeling, repair, or demolition of utilities, structures, and roads.

Date of Government Version: 01/10/2011	Source: Illinois EPA
Date Data Arrived at EDR: 02/03/2011	Telephone: 217-524-3300
Date Made Active in Reports: 02/17/2011	Last EDR Contact: 01/31/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 05/16/2011

State and tribal leaking storage tank lists

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LUST: Leaking Underground Storage Tank Sites

Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 01/21/2011	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 02/01/2011	Telephone: 217-782-6762
Date Made Active in Reports: 02/17/2011	Last EDR Contact: 03/10/2011
Number of Days to Update: 16	Next Scheduled EDR Contact: 05/16/2011
	Data Release Frequency: Semi-Annually

LUST TRUST: Underground Storage Tank Fund Payment Priority List

In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Next Scheduled EDR Contact: 06/27/2011
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Date Data Arrived at EDR: 07/03/1995

UIC: Underground Injection Wells

Injection wells are used for disposal of fluids by "injection" into the subsurface. The construction of injection wells range from very technical designs with twenty-four hour monitoring to simply a hole dug in the ground to control runoff. As a result of this diversity, the UIC Program divides injection wells into five different classes.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/28/2010 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 05/25/2010 has revealed that there are 2

EXECUTIVE SUMMARY

CORRACTS sites within approximately 1 mile of the target property.

OLIN CORPORATION ZONE 17 PLANT	ILLINOIS ROUTE 3	ESE 1/4 - 1/2 (0.452 mi.)	6	47

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/17/2010 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

State- and tribal - equivalent NPL

CAT: Illinois Category List.

A review of the CAT list, as provided by EDR, and dated 06/01/1997 has revealed that there is 1 CAT site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ARST SALVAGE	100 HAYNES AVENUE	SSE 1/2 - 1 (0.526 mi.)	7	56
Facility Type: NOTICE RESPONSE ACTION SITE				

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Illinois Environmental Protection Agency's Category List.

A review of the SHWS list, as provided by EDR, and dated 11/29/2010 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Illinois Environmental Protection Agency's LUST Incident Report.

A review of the LUST list, as provided by EDR, and dated 01/21/2011 has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

IMPDMNT: Statewide inventory of industrial, municipal, mining, oil & gas, and large agricultural impoundment. This study was conducted by the Illinois EPA to assess potential for contamination of shallow aquifers. This was a one-time study. Although many of the impoundments may no longer be present, the sites may be contaminated.

A review of the IMPDMNT list, as provided by EDR, and dated 12/31/1980 has revealed that there is 1 IMPDMNT site within approximately 0.5 miles of the target property.

1000304624

Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	33280
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	1309
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

Amount (Lbs): 4208

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 26040

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
Amount (Lbs): 249120

Waste code: K046
Waste name: WASTEWATER TREATMENT SLUDGES FROM THE MANUFACTURING, FORMULATION AND LOADING OF LEAD-BASED INITIATING COMPOUNDS.
Amount (Lbs): 279480

Waste code: LABP
Waste name: LAB PACK
Amount (Lbs): 1776

Waste code: P012
Waste name: ARSENIC OXIDE AS2O3
Amount (Lbs): 3

Corrective Action Summary:

Event date:	04/02/1990
Event:	RFA Determination Of Need For An RFI, RFI is Necessary;
Event date:	04/02/1990
Event:	RFI Imposition, Focused data collection required for stabilization evaluation.
Event date:	04/02/1990
Event:	RFA Completed
Event date:	05/07/1990
Event:	CA036
Event date:	05/07/1990
Event:	CA056
Event date:	08/29/1991
Event:	CA037
Event date:	09/27/1991
Event:	CA Prioritization, Facility or area was assigned a medium corrective action priority.
Event date:	01/09/1992
Event:	CA076
Event date:	04/15/1992
Event:	CA066
Event date:	08/13/1992
Event:	RFI Workplan Received
Event date:	09/22/1992
Event:	RFI Workplan Notice Of Deficiency Issued
Event date:	09/28/1994
Event:	RFI Workplan Approved
Event date:	09/28/1994
Event:	RFI Workplan Approved
Event date:	09/29/1995
Event:	RFI Report Received
Event date:	04/17/1996
Event:	RFI Supplemental Information Requested By Agency
Event date:	06/21/1996
Event:	RFI Supplemental Information Received
Event date:	12/22/2000
Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be

re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 07/20/2001
Event: CA005EP

Event date: 08/25/2004
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information

1000304624

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 947

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 18120

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 56

Waste code: D006
Waste name: CADMIUM
Amount (Lbs): 18110

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 1886

Waste code: D008

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A

Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/31/2010	Source: EPA

Date Made Active in Reports: 01/28/2011	Last EDR Contact: 01/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/30/2010	Source: EPA
Date Data Arrived at EDR: 12/30/2010	Telephone: 703-412-9810
Date Made Active in Reports: 02/25/2011	Last EDR Contact: 03/01/2011
Number of Days to Update: 57	Next Scheduled EDR Contact: 06/13/2011
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA's Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011	Telephone: 703-603-8704

Number of Days to Update: 36	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/17/2010

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 02/17/2010

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency

State- and tribal - equivalent NPL

CAT: Category List

Sites on this list are: Notice of Response Action, NPL, Pre/proposed NPL, Completed Remedial Action, Site Remediation Program, Federal Facilities, and Cleanup Started and/or Completed Sites.

Date of Government Version: 06/01/1997	Source: Illinois EPA
Date Data Arrived at EDR: 07/07/1997	Telephone: N/A
Date Made Active in Reports: 08/14/1997	Last EDR Contact: 02/26/2001
Number of Days to Update: 38	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

State- and tribal - equivalent CERCLIS

SHWS: State Oversight List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Land Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009
Date Made Active in Reports: 09/11/2009

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Homes & Centers Listing

Source: Department of Children & Family Services

Telephone: 312-814-4150

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/28/2010 has revealed that there is

EXECUTIVE SUMMARY

1 CERC-NFRAP site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
WATCO MECHANICAL SERVICES	435 OLD ST LOUIS RD	E 1/4 - 1/2 (0.255 mi.)	B5	9

State- and tribal - equivalent NPL

CAT: Illinois Category List.

A review of the CAT list, as provided by EDR, and dated 06/01/1997 has revealed that there is 1 CAT site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ARST SALVAGE Facility Type: NOTICE RESPONSE ACTION SITE	100 HAYNES AVENUE	NNW 1/2 - 1 (0.789 mi.)	8	25

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Illinois Environmental Protection Agency's Category List.

A review of the SHWS list, as provided by EDR, and dated 11/29/2010 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ARST SALVAGE	100 HAYNES AVENUE	NNW 1/2 - 1 (0.789 mi.)	8	25

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Illinois Environmental Protection Agency's LUST Incident Report.

A review of the LUST list, as provided by EDR, and dated 01/21/2011 has revealed that there are 4 LUST sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Illinois State Fire Marshal's STC Facility List.

A review of the UST list, as provided by EDR, and dated 02/03/2011 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
OLIN CORP	LEWIS & CLARK BLVD ZONE	W 1/8 - 1/4 (0.227 mi.)	1	7

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

IMPDMNT: Statewide inventory of industrial, municipal, mining, oil & gas , and large agricultural impoundment. This study was conducted by the Illinois EPA to assess potential for contamination of shallow aquifers. This was a one-time study. Although many of the impoundments may no longer be present, the sites may be contaminated.

A review of the IMPDMNT list, as provided by EDR, and dated 12/31/1980 has revealed that there is 1 IMPDMNT site within approximately 0.5 miles of the target property.

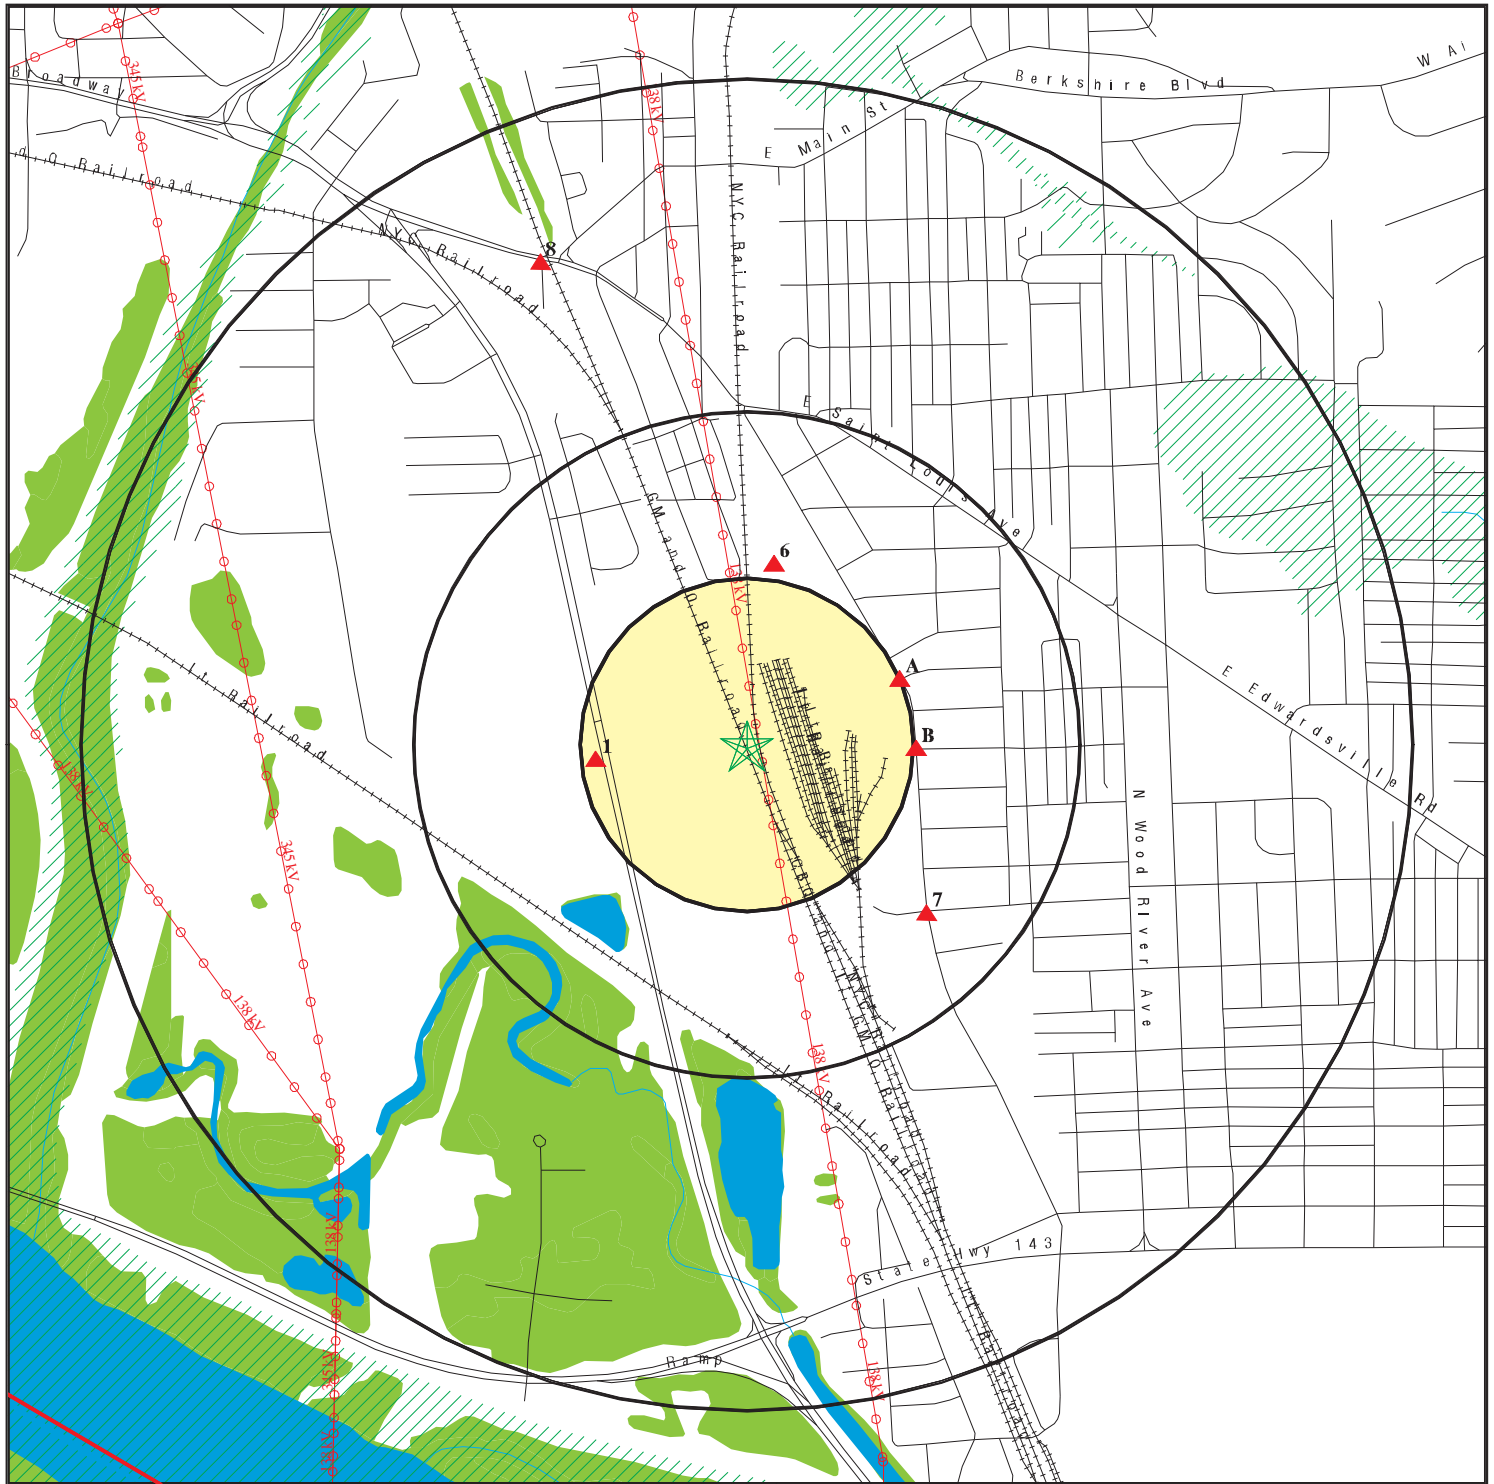

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: F006

Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste code: F008

Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: F010

Waste name: QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: F011

Waste name: SPENT CYANIDE SOLUTIONS FROM SALT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.

Waste code: K044

Waste name: WASTEWATER TREATMENT SLUDGES FROM THE MANUFACTURING AND PROCESSING OF EXPLOSIVES

Waste code: K046

Waste name: WASTEWATER TREATMENT SLUDGES FROM THE MANUFACTURING, FORMULATION AND LOADING OF LEAD-BASED INITIATING COMPOUNDS.

Waste code: K048

Waste name: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY

Waste code: K051

Waste name:	API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY
Waste code:	K061
Waste name:	EMISSION CONTROL DUST/SLUDGE FROM THE PRIMARY PRODUCTION OF STEEL IN ELECTRIC FURNACES.
Waste code:	U019
Waste name:	BENZENE (I,T)
Waste code:	D000
Waste name:	Not Defined
Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Texas Commission on Environmental Quality - Agency Central Registry (TX-TCEQ ACR) is a computer application that allows the Texas Commission on Environmental Quality (TCEQ) to use a single, centralized area to record common information, such as the company names, addresses, and telephone numbers of those the TCEQ regulates. It also contains additional IDs (permits, registrations, authorizations, etc) and their status.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 01/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 01/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/30/2010	Source: EPA
Date Data Arrived at EDR: 12/30/2010	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Homes & Centers Listing

Source: Department of Children & Family Services

Telephone: 312-814-4150

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent NPL

CAT: Illinois Category List.

A review of the CAT list, as provided by EDR, and dated 06/01/1997 has revealed that there is 1 CAT site within approximately 1 mile of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 01/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 02/14/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 05/30/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 01/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/30/2010	Source: EPA
Date Data Arrived at EDR: 12/30/2010	Telephone: 703-412-9810
Date Made Active in Reports: 02/25/2011	Last EDR Contact: 03/01/2011
Number of Days to Update: 57	Next Scheduled EDR Contact: 06/13/2011
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA's Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011	Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 01/11/2011
Number of Days to Update: 36	Next Scheduled EDR Contact: 04/25/2011
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/28/2010	Source: EPA
Date Data Arrived at EDR: 12/01/2010	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/17/2010
Date Data Arrived at EDR: 02/19/2010

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011

State- and tribal - equivalent NPL

CAT: Category List

Sites on this list are: Notice of Response Action, NPL, Pre/proposed NPL, Completed Remedial Action, Site Remediation Program, Federal Facilities, and Cleanup Started and/or Completed Sites.

Date of Government Version: 06/01/1997	Source: Illinois EPA
Date Data Arrived at EDR: 07/07/1997	Telephone: N/A
Date Made Active in Reports: 08/14/1997	Last EDR Contact: 02/26/2001
Number of Days to Update: 38	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

State- and tribal - equivalent CERCLIS

SHWS: State Oversight List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

LF SPECIAL WASTE: Special Waste Site List

These landfills, as of January 1, 1990, accept non-hazardous special waste pursuant to the Illinois EPA Non-Hazardous Special Waste Definition. List A includes landfills that may receive any non-hazardous waste, Non-Regional Pollution Control Facilities are so noted. List B includes landfills designed to receive specific non-hazardous wastes. List B landfills are designated as a Regional Pollution Control Facility by RPCF, or Non-Regional Pollution Control Facility by Non-RPCF.

Date of Government Version: 01/01/1990	Source: Illinois EPA

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/03/2010
Date Data Arrived at EDR: 12/30/2010
Date Made Active in Reports: 02/16/2011

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Homes & Centers Listing

Source: Department of Children & Family Services

Telephone: 312-814-4150

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/31/2010 has revealed that there is 1 NPL site within approximately 1.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

Proposed NPL: Proposed NPL sites . The source of this database is the U.S. EPA.

A review of the Proposed NPL list, as provided by EDR, and dated 12/31/2010 has revealed that there is 1 Proposed NPL site within approximately 1.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CHEMETCO INC	RTE 3 AND CHEMETCO LN	WNW 1/2 - 1 (0.867 mi.)	3	8

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 11/30/2010 has revealed that there is 1 CERCLIS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CHEMETCO INC	RTE 3 AND CHEMETCO LN	WNW 1/2 - 1 (0.867 mi.)	3	8

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 05/25/2010 has revealed that there is 1 CORRACTS site within approximately 1.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CHEMETCO INC	RTE 3 AND CHEMETCO LN	WNW 1/2 - 1 (0.867 mi.)	3	8

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Illinois Environmental Protection Agency's LUST Incident Report.

A review of the LUST list, as provided by EDR, and dated 01/21/2011 has revealed that there is 1 LUST site within approximately 1 mile of the target property.

Site Description: Chemetco operations were conducted on approximately 40 acres. Chemetco owns an additional 120 acres of land surrounding the facility. The facility is located in the former floodplain of the Mississippi River in an area referred to as the American Bottoms. The facility was constructed in 1969 and initiated operations as a copper smelter in 1970. The facility generated four primary solid waste streams, which are waste slag, zinc oxide, baghouse dust, and spent refractory brick. In November 2001, the facility was shut down and filed for bankruptcy.

Registry ID: 110000438768

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Count: 20 records.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/31/2010	Source: EPA

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal Brownfields sites

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

BROWNFIELDS: Municipal Brownfields Redevelopment Grant Program Project Descriptions

The Illinois Municipal Brownfields Redevelopment Grant Program (MBRGP) offers grants worth a maximum of \$240,000 each to municipalities to assist in site investigation activities, development of cleanup objectives, and performance of cleanup activities. Brownfields are abandoned or underused industrial and/or commercial properties that are contaminated (or thought to be contaminated) and have an active potential for redevelopment.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Stakeholder Correspondence

**Illinois Farm Bureau Stakeholder Letter,
August 7, 2000 from DEIS**

"Improve the economic well-being of agriculture and enrich the quality of farm family life."

August 7, 2000

Mr. Merrill Travis
Illinois Department of Transportation
Bureau of Railroads – Room 302
2300 S. Dirksen Parkway
Springfield, IL 62764

Re: Comments on High Speed Rail

Illinois Farm Bureau appreciates the efforts of the Illinois Department of Transportation to ascertain and address the highway/railway crossing needs of rural Illinois residents. We ask that the Department consider these access needs of the rural population and accommodate them.

This High-Speed Rail project should provide:

- safe and convenient public access across the railroad;
- owners of private crossings with continued access; and
- that landowners are fairly compensated for any takings associated with the project.

Recognize, too, the special access needs of Illinois agriculture and provide adequate clearances for modern farm equipment. The selection of at-grade highway/railway crossing treatments should be designed accordingly.

Please consider the accompanying comments and thank you for this opportunity for input.

Sincerely,

Kevin B. Rund
Director of Local Government

Comments of the
ILLINOIS FARM BUREAU®
on the
ST. LOUIS TO CHICAGO
HIGH SPEED RAIL PROJECT
August 7, 2000

The Illinois Farm Bureau is a volunteer organization whose membership includes more than 90,000 farmers and landowners in the state of Illinois. That strong rural membership means that Illinois Farm Bureau's policies reflect the collective interests of most farmers of this state. In addition, Illinois Farm Bureau's associate membership includes a wide array of Illinois residents. Together, these two groups total more than 380,000. That reflects the broad base of Illinois Farm Bureau policy on issues of all types, including high-speed rail.

COMMENTS INCLUDED

We'll discuss the unique aspects of this project, the policy of Illinois Farm Bureau on the issue, and other considerations we feel should be made.

It is understood that the Illinois Department of Transportation (IDOT) feels it is very important to hear about the impacts of the proposed treatments of each specific crossing. However, as a statewide organization, Illinois Farm Bureau feels such comments are best left to those in the locale who are familiar with each situation. Illinois Farm Bureau has encouraged rural residents and each of the county Farm Bureaus involved to submit just such comments. This document will be limited to concerns of a more general nature that could have statewide impact.

EFFORTS AT GATHERING LOCAL INPUT

Illinois Farm Bureau appreciates the extensive work of the Illinois Department of Transportation through recent years to ascertain and consider the needs and desires of those most directly impacted by the treatment of each at-grade highway/railway crossing within the proposed high-speed rail corridors. That effort has apparently helped to resolve at least the most serious of the concerns about access facing the ag and rural communities.

We thank the Department and its staff for that effort and hope that the importance of that input will be remembered for future transportation projects and shared with other state agencies that may face a similar situation.

P:\SHARED\GOVCOMM\BSM\Comments 2000-08.DOC

THE TRAIN DOESN'T STOP HERE

The issue of disrupting local access by closing rural roads (and rural community streets) is not new to Illinois farmers. Over the decades through the development of the Interstate highway system in this state, farmers have time-and-again been forced to accept local road closures to make way for the new system of roads. While nothing can totally compensate for the disruptions caused by such projects, farmers and other rural residents were consoled with the fact that the new Interstates were a transportation network they could, and would, reasonably utilize through its limited points of access. The Interstates added economic value for agriculture as a transportation network for grain and supplies. And, they substituted a different form of convenience in long-range automobile travel to partially compensate for the disruption to local road systems.

However, the blockage of local road access due to this passenger rail service project creates an entirely different scenario.

The closure of highway/railway crossings to accommodate passenger rail service offers virtually no direct economic value to agriculture. Other compensation is very minimal. There would be very little in the way of additional convenience for rural residents because of their extremely limited access to high-speed rail passenger service.

The high-speed rail project is being designed to serve a clientele other than rural Illinois residents. Yet, it is this same group of rural residents that would be forced to suffer the economic set-backs and added drudgery of adverse travel caused by the closure of highway/railway crossings in order to accommodate rail passenger service along the St. Louis to Chicago corridor. Additionally, these same residents would be asked to share in any tax burden designed to buoy the project's economic costs born by government--whether state or federal dollars.

Though rural residents would have to live with it daily, they would see very minimal, if any, benefits from this high-speed rail program. Impacts to rural residents should be minimized so that they not be asked to shoulder the burden of a project designed to benefit others.

IFB POLICY

The Illinois Farm Bureau Board of Directors generally supports the Illinois Department of Transportation's efforts to improve rail transportation in Illinois but opposes any public or private highway/railroad crossing closure which would significantly and adversely impact individual or public safety, property values without just compensation, or operating expenses for farmers and other businesses.

Illinois Farm Bureau policy goes on to say that the project should provide:

- safe and convenient public access across the railroad;
- owners of private crossings with continued access; and
- that landowners are fairly compensated for any takings associated with the project.

Crossings should not be closed without clearly-demonstrated and justifiable safety needs and ready, convenient, alternate access by farmers, rural residents, and emergency service providers.

ADVERSE TRAVEL

Among the highest impacts to rural residents resulting from a highway/railway crossing closure would be adverse travel. It would likely impose an obstacle with which residents would be confronted daily.

State agencies sometimes view access to farms only in terms of impacts on residential activities. But, these farms are businesses, as well. Just as the Illinois Department of Transportation would be cautious about cutting off direct access to dozens of local small business operations, it must consider some of those same impacts when considering a crossing in an agricultural area.

Over the course of a year, that additional travel would take its toll in two forms--added economic cost and the sacrifice of time lost.

Not only would residents in rural areas be impacted by highway/railway crossing closures in their daily lifestyles, but so would the private and government entities that routinely serve them. School buses, mail delivery, feed delivery, daily milk pick-up, motor fuel delivery, fertilizer delivery, parcel package services, heating fuel delivery, equipment maintenance services, veterinarian service, sales personnel, tire repair service, equipment dealer pick-up and delivery, garbage pick-up, appliance repair services, seed delivery, limestone delivery, business consulting services, soil testing services, building maintenance services, livestock buyers, crop scouting services, and others.

Because of the permanence of highway/railway crossing closings, these costs would be born into perpetuity. Those costs must be considered in any economic analysis of the cost of crossing closure or maintenance.

FARMLAND ACCESS

It is obvious that IDOT does not intend to prohibit a farmer's access to farmland he/she operates. We ask that IDOT work closely with both landowners and tenants to ensure a mutually agreeable solution to farmland access.

Frontage roads may be an acceptable means of providing access to private property when other avenues are not reasonably available. No responsibility for obtaining that legal or physical access should be born by the landowner(s) or tenant(s) in question. Those who will use the access and those over whose property that access will be provided should each be consulted on the most appropriate means of providing it.

The access routes should provide clearance of at least 25 feet in width and should be usable at any time and in any weather conditions when adjacent fieldwork might reasonably be undertaken.

EMERGENCY SERVICES

No highway/railway crossing should be closed if that closure would add more than a few minutes to any emergency run by police, fire or ambulance personnel or equipment. Closure of any highway/railway crossing used to access rural residents or farmsteads--even farm fields--could have serious emergency service impacts. Police protection and fire, rescue, and ambulance services are vital. In life-and-death situations, minutes count. Delays in access by emergency vehicles of only a few minutes could result in substantial economic and/or immeasurable human losses.

Farming is the most dangerous occupation in this nation¹. The farm community relies on the availability of emergency services to mitigate that fact. In light of that, most farm communities dedicate thousands of volunteer hours to make these emergency services a viability reality. It would be inexcusable to thwart that effort in order to provide a mere convenience to rail passengers who are just "passing through."

Rural communities should have more than one available crossing in the community. These communities are often divided by the railroad. Without adequate and redundant crossing potential in the community, parts of it-- and the rural area it serves--could temporarily be cut-off from local emergency services. The likelihood of that potential could exponentially increase in disaster situations. The collapse of a building, the downing of power lines, the failure of a bridge, the flooding of a road, the toppling of trees, the derailment of a train, the collision of highway vehicles at the crossing--these and other possibilities dictate that more than one access route across railroad tracks be routinely maintained in communities.

RE-ROUTING OF FARM CHEMICALS AND FUELS

Despite local road jurisdictional acquiescence, no highway/railway crossing should be closed that would force the shipment of potentially hazardous materials into more highly populated or congested areas. While frequency of use of some crossings are at or near the perimeters of small communities might suggest those as candidates for closure, they often serve an important role as a less-threatening route for fuels, fertilizers and chemicals used in farming, agribusiness and in other businesses in the area. To close those may force that otherwise rural traffic into communities, even into the community's downtown area and its busiest streets.

¹ "Accident Facts", by National Safety Council, 1993 edition.

RE-ROUTING LARGE TRUCKS AND FARM EQUIPMENT

Where large trucks and/or farm equipment must be re-routed due to the closure of a public or private highway/railway crossing, the Department should ensure that the alternate route(s) will provide adequate weight and dimensional tolerances and will not inject that equipment into traffic flows that impose additional safety concerns.

CROSSING PROTECTION OPTIONS

At-grade highway/railway crossing protection systems installed on rural roads, private farm crossings and/or in rural communities must be designed to accommodate modern agricultural equipment. At minimum, clearances of at least 25 feet in width and 14 feet in height should be provided. In addition, the length of farm equipment—especially when towed in combination—should be accounted for and accommodated safely where traffic must be “stored” while awaiting the passage of a train.

The use of median barriers in combination with dual crossing gates would pose a problem for ag equipment—and consequently for other traffic on the road. Median barriers, if used, would have to be designed to be easily and safely mounted by farm equipment and to withstand repeated passage by such equipment without suffering significant damage. If that is not both possible and practical, then other forms of crossing protection should be used. In addition, owners and operators who move wide equipment should not be held in violation of any state or local traffic law nor held liable for damage to such devices for routine movement of equipment over them while straddling the median in an effort to avoid collision with obstacles alongside the roadway.

SUMMARY

Illinois Farm Bureau appreciates the efforts of the Illinois Department of Transportation to ascertain and address the highway/railway crossing needs of rural Illinois residents. We ask that the Department consider these access needs of the rural population and accommodate them.

This project should provide:

- safe and convenient public access across the railroad;
- owners of private crossings with continued access; and
- that landowners are fairly compensated for any takings associated with the project.

Recognize, too, the special access needs of Illinois agriculture and provide adequate clearances for modern farm equipment. The selection of at-grade highway/railway crossing treatments should be designed accordingly.

Thank you for considering these comments.

2010 Track Renewal Train Initiation Letters to Stakeholders

Illinois Department of Transportation

Bureau of Railroads, Room 339
2300 South Dirksen Parkway / Springfield, Illinois / 62764

November 22, 2010

SUBJECT: Illinois Department of Transportation
High Speed Rail - Surveys
Chicago to St. Louis

Dear Landowner:

The Illinois Department of Transportation, Bureau of Railroads' consultant is now performing surveys along the High Speed Rail (Union Pacific) Corridor from Chicago to St. Louis. Survey crews are working in your area and may find it necessary to enter the property owned or leased by you in order to investigate the potential environmental impacts and engineering constraints related to this Project.

Our personnel have been instructed to consult with you before entering upon your land. I am sure you will find the crew courteous and considerate of your rights and will cause you a minimum of inconvenience.

This survey crew will conduct their work in a manner intended to avoid property or crop damage. In the unlikely event you sustain any damages due to our crew's activities or if you have any questions at all please contact Kevin Bischel at (312) 803-6481.

Thank-you in advance for your cooperation.

Respectfully,

A handwritten signature in cursive script that reads "Michael R. Garcia".

Michael R. Garcia, P. E.
Acting Bureau Chief - High Speed Rail

Mike.Garcia@illinois.gov

**ILLINOIS
HIGH-SPEED RAIL**
CHICAGO TO ST. LOUIS

www.idothsr.org

Illinois Department of Transportation

Division of Public and Intermodal Transportation

100 West Randolph Street / Suite 6-600 / Chicago, Illinois / 60601

August 11, 2010

Mr. Fred Finchum
Mayor
City of Atlanta
Box 385
Atlanta, IL 61723

Dear Mr. Fred Finchum:

We are writing to inform you that together the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) have recently initiated a Track Renewal Train (TRT) construction project. This project will include track improvements along the UP rail line between Godfrey and Springfield. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity passenger Rail Program (HSIPR) to allow for improved operations and increased train speeds and is part of the proposed high-speed passenger rail corridor project from Chicago to St. Louis.

The UP plans to initiate work in September 2010 utilizing a quarter mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operation nears each highway-rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications that may be required as part of the installation of new automatic warning devices or to address roadway profile concerns will be completed after the TRT work is completed, and after a Diagnostic Field Review of each crossing is conducted. Reviews will identify appropriate safety measures to be provided at the highway-rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, and the municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups including the local community as well as the counties. A website is also being developed that will provide current project information and a listing of upcoming public involvement events, as well as a place for stakeholders to comment throughout construction.

For your reference a construction map and a list of the crossings is enclosed. We will contact you within the next two weeks to schedule a meeting to discuss the construction project, schedule, and coordination efforts. If you have any questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

Sincerely,

August 11, 2010

Mr. Daniel Osborn
Highway Commissioner
Atlanta Township
2243 2350th St
Atlanta, IL 61723

Dear Mr. Daniel Osborn :

We are writing to inform you that together the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) have recently initiated a Track Renewal Train (TRT) construction project. This project will include track improvements along the UP rail line between Godfrey and Springfield. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity passenger Rail Program (HSIPR) to allow for improved operations and increased train speeds and is part of the proposed high-speed passenger rail corridor project from Chicago to St. Louis.

The UP plans to initiate work in September 2010 utilizing a quarter mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operation nears each highway-rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications that may be required as part of the installation of new automatic warning devices or to address roadway profile concerns will be completed after the TRT work is completed, and after a Diagnostic Field Review of each crossing is conducted. Reviews will identify appropriate safety measures to be provided at the highway-rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, and the municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups including the local community as well as the counties. A website is also being developed that will provide current project information and a listing of upcoming public involvement events, as well as a place for stakeholders to comment throughout construction.

The outreach program will include meetings with special interest groups including the local community as well as the counties. A website is also being developed that will provide current project information and a listing of upcoming public involvement events, as well as a place for stakeholders to comment throughout construction.

For your reference a construction map and a list of the crossings is enclosed. We will contact you within the next two weeks to schedule a meeting to discuss the construction project, schedule, and coordination efforts. If you have any questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

Sincerely,

August 11, 2010

Mr. Shane Workman
Highway Commissioner
Chatham Township
6749 Lick Rd
Chatham, IL 62629

Dear Mr. Shane Workman :

We are writing to inform you that together the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) have recently initiated a Track Renewal Train (TRT) construction project. This project will include track improvements along the UP rail line between Godfrey and Springfield. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity passenger Rail Program (HSIPR) to allow for improved operations and increased train speeds and is part of the proposed high-speed passenger rail corridor project from Chicago to St. Louis.

The UP plans to initiate work in September 2010 utilizing a quarter mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operation nears each highway-rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications that may be required as part of the installation of new automatic warning devices or to address roadway profile concerns will be completed after the TRT work is completed, and after a Diagnostic Field Review of each crossing is conducted. Reviews will identify appropriate safety measures to be provided at the highway-rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, and the municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups including the local community as well as the counties. A website is also being developed that will provide current project information and a listing of upcoming public involvement events, as well as a place for stakeholders to comment throughout construction.

For your reference a construction map and a list of the crossings is enclosed. We will contact you within the next two weeks to schedule a meeting to discuss the construction project, schedule, and coordination efforts. If you have any questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

August 11, 2010

Mr. Brian Snow
Highway Commissioner
McLean County
309 S Blatchford
McLean, IL 61754

Dear Mr. Brian Snow :

We are writing to inform you that together the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) have recently initiated a Track Renewal Train (TRT) construction project. This project will include track improvements along the UP rail line between Godfrey and Springfield. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity passenger Rail Program (HSIPR) to allow for improved operations and increased train speeds and is part of the proposed high-speed passenger rail corridor project from Chicago to St. Louis.

The UP plans to initiate work in September 2010 utilizing a quarter mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operation nears each highway-rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications that may be required as part of the installation of new automatic warning devices or to address roadway profile concerns will be completed after the TRT work is completed, and after a Diagnostic Field Review of each crossing is conducted. Reviews will identify appropriate safety measures to be provided at the highway-rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, and the municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups including the local community as well as the counties. A website is also being developed that will provide current project information and a listing of upcoming public involvement events, as well as a place for stakeholders to comment throughout construction.

For your reference a construction map and a list of the crossings is enclosed. We will contact you within the next two weeks to schedule a meeting to discuss the construction project, schedule, and coordination efforts. If you have any questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

August 11, 2010

Mr. Wayne Joplin
Mayor
City of Virden
101 W Jackson
Virden, IL 62690

Dear Mr. Wayne Joplin:

We are writing to inform you that together the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) have recently initiated a Track Renewal Train (TRT) construction project. This project will include track improvements along the UP rail line between Godfrey and Springfield. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity passenger Rail Program (HSIPR) to allow for improved operations and increased train speeds and is part of the proposed high-speed passenger rail corridor project from Chicago to St. Louis.

The UP plans to initiate work in September 2010 utilizing a quarter mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operation nears each highway-rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications that may be required as part of the installation of new automatic warning devices or to address roadway profile concerns will be completed after the TRT work is completed, and after a Diagnostic Field Review of each crossing is conducted. Reviews will identify appropriate safety measures to be provided at the highway-rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, and the municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups including the local community as well as the counties. A website is also being developed that will provide current project information and a listing of upcoming public involvement events, as well as a place for stakeholders to comment throughout construction.

For your reference a construction map and a list of the crossings is enclosed. We will contact you within the next two weeks to schedule a meeting to discuss the construction project, schedule, and coordination efforts. If you have any questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

2010 Track Renewal Train Initiation Letters Attachments

Chicago - St. Louis High Speed Rail

Project Location Map

- In January, the Obama administration announced that Illinois was awarded a total of \$1.2 billion in American Recovery and Reinvestment Act (ARRA) funds for high-speed passenger rail - one of only three states to receive an award of more than \$1 billion.
- Illinois' high-speed rail signature route, Chicago to St. Louis, was allocated \$1.1 billion of the total award for corridor improvements. The improvements will allow passenger rail service from Chicago to St. Louis to operate at speeds up to 110 mph.
- On July 20, 2010, Governor Pat Quinn announced that construction will begin in early September on a 90-mile segment from just north of Alton to south of Springfield and north of Springfield to just south of Lincoln*. The \$98 million project is the first chapter of the Chicago to St. Louis high-speed rail route improvements and will be funded from the \$1.1 billion ARRA award.

*A study is currently underway to determine the best route through Springfield.

Mayor Bill Baily
Village of McLean
PO Box 84
McLean, IL 61754

Dear Mayor Baily:

We are writing to inform you that the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) will reinitiate the Track Renewal Train (TRT) construction project that began in September 2010. This project will include track improvements along the UP rail line between Elkhart and Dwight. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity Passenger Rail (HSIPR) program. This funding is allocated for corridor improvements along the Chicago to St. Louis route including upgrading existing track for future train operations at up to 110 miles per hour.

The UP plans to initiate work in early April 2011 (weather permitting) utilizing a half mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operations near highway/rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications required as part of the installation of new automatic warning devices, or to address roadway profile concerns, will be completed after the TRT work and after a Diagnostic Field Review of each crossing. Reviews will identify appropriate safety measures to be provided at the highway/rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups as well as the local community. Please visit the project website, www.idothsr.org, for up to date project information such as temporary crossing closures, a listing of upcoming public involvement events, and to comment on the project and/or construction. Also visit the Project Hotline, 1-855-IDOT-HSR (436-8477), to comment on the project and/or construction.

The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity Passenger Rail (HSIPR) program. This funding is allocated for corridor improvements along the Chicago to St. Louis route including upgrading existing track for future train operations at up to 110 miles per hour.

The UP plans to initiate work in early April 2011 (weather permitting) utilizing a half mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operations near highway/rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications required as part of the installation of new automatic warning devices, or to address roadway profile concerns, will be completed after the TRT work and after a Diagnostic Field Review of each crossing. Reviews will identify appropriate safety measures to be provided at the highway/rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups as well as the local community. Please visit the project website, www.idothsr.org, for up to date project information such as temporary crossing closures, a listing of upcoming public involvement events, and to comment on the project and/or construction. Also visit the Project Hotline, 1-855-IDOT-HSR (436-8477), to comment on the project and/or construction.

Local Officials Briefing

<u>Date/Time</u>	<u>Location</u>	<u>Address</u>
Wednesday, March 2, 2011 9:00 am – 11:00 am	Double Tree Hotel Ballroom	10 Brickyard Drive Bloomington, IL 61701
Friday, March 4, 2011 9:00 am – 11:00 am	Lincoln Park District- Railer Room	1400 Primm Road Lincoln, IL 62656
Friday, March 4, 2011 2:30 pm – 4:30 pm	Village of Dwight	Public Service Complex Council Room 209 S. Prairie Avenue Dwight, IL 60420

The Local Officials Briefings may be attended on any of the dates listed above.

Why Attend?

- Receive updates on the Illinois High-Speed Rail Program.
- Learn about construction schedule and location information.
- Receive information about temporary crossing closures during construction.
- Meet with IDOT and project team representatives to answer your questions.

For your reference a construction map, list of the crossings within the 2011 TRT construction limits, and before and after photographs from the 2010 TRT construction are enclosed. A Union Pacific representative will be contacting you soon to discuss the construction project, schedule, and coordination efforts. If you have any project related questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

Lexington, IL 61753

Dear Mayor Mohr:

We are writing to inform you that the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) will reinitiate the Track Renewal Train (TRT) construction project that began in September 2010. This project will include track improvements along the UP rail line between Elkhart and Dwight. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity Passenger Rail (HSIPR) program. This funding is allocated for corridor improvements along the Chicago to St. Louis route including upgrading existing track for future train operations at up to 110 miles per hour.

The UP plans to initiate work in early April 2011 (weather permitting) utilizing a half mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operations near highway/rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications required as part of the installation of new automatic warning devices, or to address roadway profile concerns, will be completed after the TRT work and after a Diagnostic Field Review of each crossing. Reviews will identify appropriate safety measures to be provided at the highway/rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups as well as the local community. Please visit the project website, www.idothsr.org, for up to date project information such as temporary crossing closures, a listing of upcoming public involvement events, and to comment on the project and/or construction. Also visit the Project Hotline, 1-855-IDOT-HSR (436-8477), to comment on the project and/or construction.

Local Officials Briefing

<u>Date/Time</u>	<u>Location</u>	<u>Address</u>
Wednesday, March 2, 2011 9:00 am – 11:00 am	Double Tree Hotel Ballroom	10 Brickyard Drive Bloomington, IL 61701
Friday, March 4, 2011 9:00 am – 11:00 am	Lincoln Park District- Railer Room	1400 Primm Road Lincoln, IL 62656
Friday, March 4, 2011 2:30 pm – 4:30 pm	Village of Dwight	Public Service Complex Council Room 209 S. Prairie Avenue Dwight, IL 60420

The Local Officials Briefings may be attended on any of the dates listed above.

Why Attend?

- Receive updates on the Illinois High-Speed Rail Program.
- Learn about construction schedule and location information.
- Receive information about temporary crossing closures during construction.
- Meet with IDOT and project team representatives to answer your questions.

For your reference a construction map, list of the crossings within the 2011 TRT construction limits, and before and after photographs from the 2010 TRT construction are enclosed. A Union Pacific representative will be contacting you soon to discuss the construction project, schedule, and coordination efforts. If you have any project related questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

Sincerely,

George Weber

Eric S. Schmitt
County Engineer
McLean County
102 S Towanda Barnes Road
Bloomington, IL 61705

Dear Mr. Schmitt:

We are writing to inform you that the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) will reinstate the Track Renewal Train (TRT) construction project that began in September 2010. This project will include track improvements along the UP rail line between Elkhart and Dwight. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity Passenger Rail (HSIPR) program. This funding is allocated for corridor improvements along the Chicago to St. Louis route including upgrading existing track for future train operations at up to 110 miles per hour.

The UP plans to initiate work in early April 2011 (weather permitting) utilizing a half mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operations near highway/rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications required as part of the installation of new automatic warning devices, or to address roadway profile concerns, will be completed after the TRT work and after a Diagnostic Field Review of each crossing. Reviews will identify appropriate safety measures to be provided at the highway/rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups as well as the local community. Please visit the project website, www.idothsr.org, for up to date project information such as temporary crossing closures, a listing of upcoming public involvement events, and to comment on the project and/or

construction. Also visit the Project Hotline, 1-855-IDOT-HSR (436-8477), to comment on the project and/or construction.

Local Officials Briefing

<u>Date/Time</u>	<u>Location</u>	<u>Address</u>
Wednesday, March 2, 2011 9:00 am – 11:00 am	Double Tree Hotel Ballroom	10 Brickyard Drive Bloomington, IL 61701
Friday, March 4, 2011 9:00 am – 11:00 am	Lincoln Park District- Railer Room	1400 Primm Road Lincoln, IL 62656
Friday, March 4, 2011 2:30 pm – 4:30 pm	Village of Dwight	Public Service Complex Council Room 209 S. Prairie Avenue Dwight, IL 60420

The Local Officials Briefings may be attended on any of the dates listed above.

Why Attend?

- Receive updates on the Illinois High-Speed Rail Program.
- Learn about construction schedule and location information.
- Receive information about temporary crossing closures during construction.
- Meet with IDOT and project team representatives to answer your questions.

For your reference a construction map, list of the crossings within the 2011 TRT construction limits, and before and after photographs from the 2010 TRT construction are enclosed. A Union Pacific representative will be contacting you soon to discuss the construction project, schedule, and coordination efforts. If you have any project related questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

Sincerely,

George Weber

**ILLINOIS
HIGH-SPEED
RAIL**

CHICAGO TO ST. LOUIS

February 17, 2011

David R. Winters
County Engineer
Livingston County
1705 S Manlove Sreet
Pontiac, IL 61764

Dear Mr. Winters:

We are writing to inform you that the Illinois Department of Transportation (IDOT) and Union Pacific Railroad (UP) will reinstate the Track Renewal Train (TRT) construction project that began in September 2010. This project will include track improvements along the UP rail line between Elkhart and Dwight. The TRT project is funded through the Federal Railroad Administration's (FRA) High-Speed Intercity Passenger Rail (HSIPR) program. This funding is allocated for corridor improvements along the Chicago to St. Louis route including upgrading existing track for future train operations at up to 110 miles per hour.

The UP plans to initiate work in early April 2011 (weather permitting) utilizing a half mile long high-production assembly TRT machine that replaces ties and other track components. Detours and other traffic control measures will be established as the construction operations near highway/rail grade crossing and specific measures will be coordinated with local roadway agencies prior to the start of the TRT work. At both public and private crossings, the surfaces will be reconstructed with new concrete panels, including a small section of asphalt approach pavement. Further roadway approach modifications required as part of the installation of new automatic warning devices, or to address roadway profile concerns, will be completed after the TRT work and after a Diagnostic Field Review of each crossing. Reviews will identify appropriate safety measures to be provided at the highway/rail crossings based upon the anticipated train operations.

A key planning tool for this project is a public outreach program to facilitate communications between IDOT, UP, municipalities, townships, counties, and other stakeholders along this corridor. The outreach program will include meetings with special interest groups as well as the local community. Please visit the project website, www.idothsr.org, for up to date project information such as temporary crossing closures, a listing of upcoming public involvement events, and to comment on the project and/or

construction. Also visit the Project Hotline, 1-855-IDOT-HSR (436-8477), to comment on the project and/or construction.

You're Invited!

Local Officials Briefing

<u>Date/Time</u>	<u>Location</u>	<u>Address</u>
Wednesday, March 2, 2011 9:00 am – 11:00 am	Double Tree Hotel Ballroom	10 Brickyard Drive Bloomington, IL 61701
Friday, March 4, 2011 9:00 am – 11:00 am	Lincoln Park District- Railer Room	1400 Primm Road Lincoln, IL 62656
Friday, March 4, 2011 2:30 pm – 4:30 pm	Village of Dwight	Public Service Complex Council Room 209 S. Prairie Avenue Dwight, IL 60420

The Local Officials Briefings may be attended on any of the dates listed above.

Why Attend?

- Receive updates on the Illinois High-Speed Rail Program.
- Learn about construction schedule and location information.
- Receive information about temporary crossing closures during construction.
- Meet with IDOT and project team representatives to answer your questions.

For your reference a construction map, list of the crossings within the 2011 TRT construction limits, and before and after photographs from the 2010 TRT construction are enclosed. A Union Pacific representative will be contacting you soon to discuss the construction project, schedule, and coordination efforts. If you have any project related questions or need additional information before this time, please contact me at 312-793-4222 or Mike Garcia at 217-782-4133.

Sincerely,

George Weber
Acting Deputy Director, Bureau of Railroads

2011 Track Renewal Train Initiation Letters Attachments

Chicago - St. Louis High Speed Rail

Project Location Map

- In January, the Obama administration announced that Illinois was awarded a total of \$1.2 billion in American Recovery and Reinvestment Act (ARRA) funds for high-speed passenger rail - one of only three states to receive an award of more than \$1 billion.
- In September 2010, one of the first construction projects in the national High-Speed Intercity Passenger Rail (HSIPR) program began along the Chicago to St. Louis route to prepare it for future train operation at up to 110 mph.
- Illinois was the first state in the HSIPR program to sign a Cooperative Agreement with the Federal Railroad Administration.

Date of Approval

For Illinois DOT

ABSTRACT: The Illinois Department of Transportation (DOT) in conjunction with the Federal Railroad Administration (FRA) are evaluating improvements within the proposed Union Pacific Railroad Track project to be constructed on the UPRR Joliet Subdivision between Joliet (Milepost (MP) 36.7) and Dwight, Illinois (MP 72.8). This Environmental Assessment (EA) addresses mainline track capacity and operational issues for existing and expected near-term freight and Amtrak services along the current Amtrak service routing between Joliet and Dwight.

These improvements were not included in the Chicago – St. Louis High Speed Rail Project Environmental Impact Statement (EIS), completed in January 2003 and the Record of Decision (ROD) signed in January 2004. The proposed improvements have independent utility in addressing issues for existing and expected near-term freight and Amtrak services, and does not preclude other options to address the Chicago-Dwight portion of High Speed Rail if further corridor studies are initiated or advanced under the National Environmental Protection Act (NEPA).

The preferred alternative follows the current Amtrak service routing from Chicago - St. Louis and includes 1) track upgrades from Joliet (MP 36.7) to Dwight (MP 72.8) to allow 110 mph trains where safe and practical, 2) a new 2nd mainline track along the Union Pacific Railroad from Joliet (MP 36.8) to Elwood (MP 44.69) and 3) a freight siding from MP 55.0 to 57.13. Also includes other improvements to increase in on-time performance and reduce the potential for delay to one or more of the trains operating over this line including installation of Centralized Traffic Control (CTC) with a Positive Train Control (PTC) overlay. No significant impacts to natural, social or human environments would occur. Potential impacts of 1.28 acres of wetland, 0.65 acres of open water, and 4 vibration impacts.

Chapter 1

Purpose and Need

1.0 PURPOSE AND NEED

1.1 Background

The Federal Railroad Administration (FRA) has released guidance on implementing the President's "Vision for High Speed Rail" for applying for funding for high speed rail projects under the American Recovery and Reinvestment Act of 2009 (ARRA). In response, the Illinois Department of Transportation (IDOT) submitted an application for funding under FRA's "Track 2" High Speed Intercity Passenger Rail (HSIPR) Program for the Chicago – St. Louis corridor. On January 28, 2010, IDOT received \$1.1 billion for corridor improvements between Dwight and St. Louis based on the 2004 Record of Decision (ROD).

The 2003 Final Environmental Impact Statement (FEIS) and 2004 ROD for the Chicago - St. Louis High-Speed Rail Project selected a "build" alternative, including track, siding, signal and grade crossing improvements along the existing single track corridor south of Dwight to St. Louis and documented environmental impacts for the "build" alternative including 110 miles per hour (mph) diesel locomotive operations in this corridor. The 2004 ROD "build" alternative would reduce travel time between Chicago and St. Louis.

The 2004 ROD deferred selection of a corridor from Dwight to Chicago to future study. Under the "no build" scenario for this section, the existing Amtrak alignment using Union Pacific Railroad (UPRR) and Canadian National Railway (CN) facilities was maintained, maximum operating speed remained at 79 mph, and no physical improvements or changes in Amtrak operating characteristics (i.e., number and speed of trains) were recommended. The FEIS recognized that further actions could be taken in the Dwight-Chicago portion to make additional service improvements when needed, subject to subsequent environmental review.¹

Since the 2004 ROD, the IDOT has made significant progress on the Chicago and St. Louis Corridor in cooperation with the UPRR, which owns the right-of-way (ROW) south of Joliet and operates rail freight services in the corridor. Upgrades along the UPRR portion of the corridor pursuant to the 2004 ROD have included track, signaling and grade crossing improvements.

1.2 Introduction

The proposed project is part of an incremental approach to improving existing railroad infrastructure to reduce travel time for the passenger rail mode and is the most cost-effective approach to improving current intercity rail service and facilitating development of high-speed rail within the Chicago – St. Louis corridor.

¹ 3.2.2. "Selected Alignment", Chicago-St. Louis High Speed Rail Project Final EIS, Illinois Department of Transportation, January 2003,

1.3 Project History

For over a decade, the IDOT has pursued improvements to passenger rail service between Chicago and St. Louis. The Chicago – St. Louis corridor is part of the Midwest Regional Rail System plan to develop and implement a 21st Century regional passenger rail system.

2003 Final Environmental Impact Statement/2004 Record of Decision: In January 2003, the IDOT completed a FEIS for the Chicago – St. Louis corridor. The Preferred Alternative from the FEIS included the provision of high-speed rail service, operating at 110 mph, along the existing Chicago – St. Louis Amtrak route south of Dwight, Illinois. No action was proposed between Chicago and Dwight. The proposed service consisted of three round trips per day. A ROD was signed in January 2004. Since the ROD, the IDOT has made significant progress on the Chicago and St. Louis Corridor in cooperation with the UPRR, which owns the ROW south of Joliet and operates rail freight services in the corridor. Extensive rehabilitation and upgrading of the Chicago-St. Louis corridor track and signal systems has been undertaken, and four-quadrant gates installed at many grade crossings in the corridor. Under earlier programs, work had been completed using \$40 million in loan and grants provided by the IDOT and loans from the FRA. On January 28, 2010, IDOT received an additional \$1.1 billion for corridor improvements between Dwight and St. Louis based on the 2004 ROD.

In addition, IDOT has coordinated the planning efforts with the CN, the owner and operator of the rail line between Joliet and downtown Chicago. These efforts have involved subsidizing Amtrak operations and investing capital to upgrade Union Pacific (UP) and Amtrak facilities.

New Environmental Impact Statement (2011): On February 14, 2011, FRA and IDOT issued a Notice of Intent (NOI) to prepare a Tier 1 Environmental Impact Statement for the Chicago, IL to St. Louis, MO High Speed Rail Corridor Program. According to the NOI, the Tier 1 EIS will assess changing the existing rail corridor from one track to two tracks; increasing the number of high-speed passenger trains; potential corridor route alternatives between Chicago and Joliet, IL, through the City of Springfield, and for the approach to St. Louis, MO; and the associated transportation and environmental impacts. Also in the NOI, FRA and IDOT stated their intention to not examine the Norfolk Southern-Canadian National alignment between Dwight and Chicago, which was previously studied in the 2003 FEIS. The dropping of this alignment from further study will result in a single “build” alternative utilizing the UPRR alignment between Dwight and Joliet for the High Speed Rail Corridor Program, which coincides with the limits of this Environmental Assessment.

1.4 Project Area

The overall Environmental Assessment (EA) project area lies along a section between Joliet and Dwight which extends in a southeast direction across Will County, Grundy County and

northeastern Livingston County. The action proposed in this document consists of three components located within UPRR's Joliet Subdivision.

The first component will encompass the extension of the 110 mph speed limit approximately 36 miles from the city of Joliet to the village of Dwight. The second component consists of a new 2nd mainline track located between UPRR Milepost (MP) 36.7 in the city of Joliet, and MP 44.69 in the village of Elwood. The third component consists of a new siding track located between UPRR MP 55.0 near the city of Wilmington and MP 57.13 near the village of Braidwood. Figure 1-1 shows the Joliet to Dwight EA Project area, with the location of the 110 mph operational improvements and 2nd mainline track improvements reviewed in this document. The locations of the existing culvert at MP 38.3 and bridges at MP 42.6 and 44.4 reviewed in this document are shown on Figure 1-1.

1.5 Project Purpose and Need

1.5.1 Purpose of the Proposed Action

The project purpose is to enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This purpose is fully complementary with the projects awarded under the FRA HSIPR grant to IDOT that will be implemented in the section south of Joliet. As noted above in 1.3, the purpose is also complementary with the single Dwight-Joliet corridor that is proposed to be considered by the Tier 1 EIS for the Chicago-St. Louis High Speed Intercity Passenger Rail program.

The project's purpose is also to benefit existing medium and long-distance Amtrak service, including the Lincoln Service between Chicago and St. Louis; the Kansas City Mule and Ann Rutledge trains between St. Louis and Kansas City, MO; and the Texas Eagle, providing service between Chicago and St. Louis, and then southwest to Little Rock, AR, Dallas/Ft. Worth, TX, and other points west to Los Angeles, CA. These trains serve one suburban Chicago stop and eight intermediate stops between Chicago and St. Louis, including Joliet, Bloomington-Normal and Springfield, Illinois.

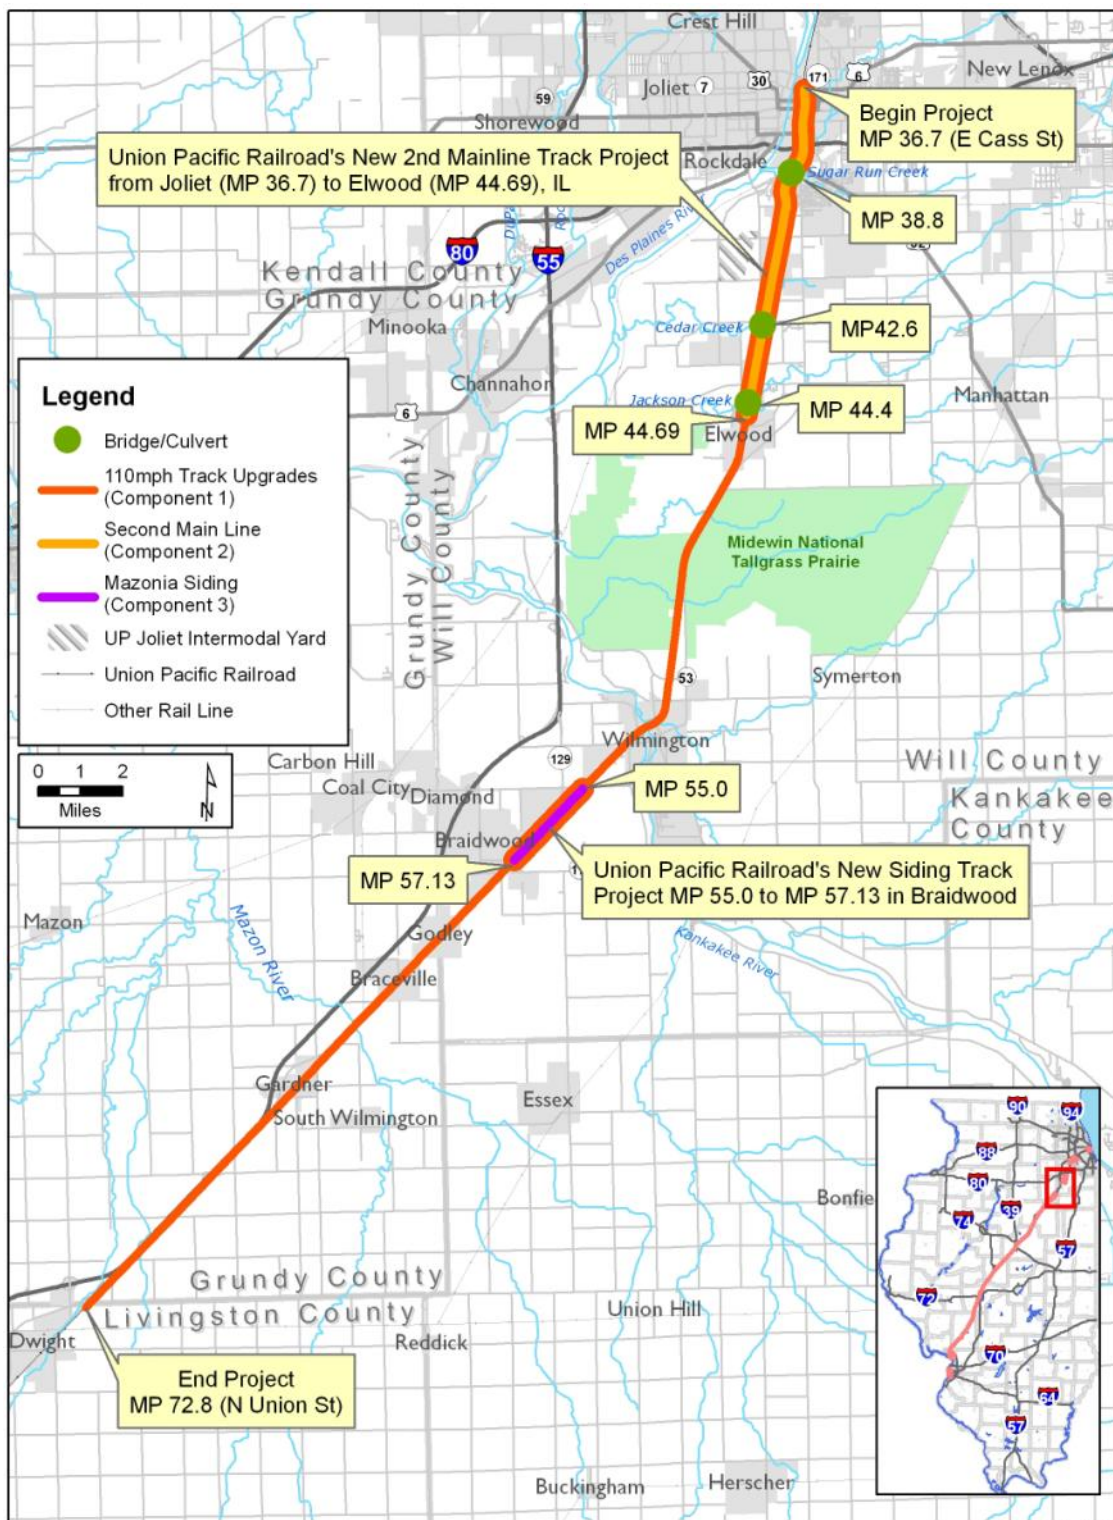

The proposed alternatives have independent utility in addressing mainline track capacity and operational issues for existing and expected near-term freight and Amtrak services, and do not preclude other options to address the Dwight-Chicago portion of High Speed Rail if further corridor studies are initiated or advanced under the National Environmental Protection Act (NEPA).

1.5.2 Need for the Proposed Action

There is a need for improvements to on-time-performance on the existing Chicago-St. Louis route and to provide for an increase in average speeds and shorter trip times. Under the current schedules, there are about 15 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains and eight

1.0 Purpose and Need

Figure 1-1. Project Area

intermediate distance "Lincoln Service" trains) and five UPRR freights (a combination of local and through trains).

Under the present infrastructure configuration, delays to passenger and freight trains can and do occur on the 37-mile line section between Joliet and Dwight on the Chicago to St. Louis corridor. For example, "Lincoln Service" trains 300 and 301 (first departures of the day northbound and southbound, respectively) are scheduled to meet north of Dwight, but the limited siding and track capacity, along with frequent road crossings in this section, constrains the meet locations, frequently subjecting these trains to delays. In a similar context, trains 302 and 303 are scheduled to meet in this same section of line.

Reducing travel time and improving service reliability are paramount to increasing the viability of intercity passenger rail transportation between Chicago and St. Louis. In order to be attractive, passenger rail must meet or better the travel time of auto travel on the parallel interstate freeways with 65 mph speed limits. An overall reduction in travel time between Chicago and St. Louis is required to achieve that need. On-time performance, another key aspect of reliability, must also be improved.

Chapter 2

Alternatives

2.0 ALTERNATIVES

2.1 Introduction

The alternatives evaluated in this EA includes the continuation of existing Amtrak service in the corridor (No Build Alternative) and a Detailed Build Alternative that provides for improvements to enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. The Detailed Build Alternative is also fully complementary to the projects awarded under the FRA HSIPR Grant to IDOT that will be implemented in the section south of Dwight.

2.2 No Build Alternative

The No Build Alternative includes existing and expected near-term freight and Amtrak services between Chicago and Dwight. These services would operate on the existing track configuration of double track between MP 36.7 to 38.5 and single track between MP 38.5 to 72.81 and would not include any signaling improvements or additional crossovers to enhance operational flexibility.

South of the project limits, it is anticipated that other improvements to implement High Speed Rail will be pursued, as contained in the Chicago – St. Louis High Speed Rail Project EIS, completed in January 2003, with the ROD signed in January 2004. The EIS and ROD included the upgrade of the existing single track and 22 miles of siding, 12 miles of second track, one grade-separated highway-railroad grade crossing, and the installation of enhanced warning devices at 174 grade crossings, along the UP/Amtrak route between Dwight and St. Louis to allow 110- mph operation for three round trips per day. Since the ROD, the IDOT has made significant progress on the Chicago and St. Louis Corridor in cooperation with the UPRR, which owns the ROW south of Joliet and operates rail freight services in the corridor.

In February 2011, FRA and IDOT issued a Notice of Intent to prepare a new Tier 1 EIS for further high speed passenger rail service improvements from Chicago, IL to St. Louis, MO, building upon the selected alternative of the 2004 ROD. The NOI included a proposal to examine 110 mph passenger train service as well as to effectively consider a single “build” alternative utilizing the UPRR corridor between Dwight and Joliet. Therefore, the Tier 1 EIS proposal, which will examine improvements to allow 110 mph service north from Dwight to Joliet, will encompass the UPRR corridor examined in this Environmental Assessment as well as potential improvements north of Joliet and south of Dwight. It is possible the No Build Alternative in this EA would be superseded in the future by potential improvements resulting from the Tier 1 EIS study.

With the opening of the new Joliet intermodal terminal, the number of freight trains is expected to increase in the next year from five per day to 12 per day (construction began in August 2009 and the initial phase opened for revenue service in August 2010). Additional growth in the number of freight trains is also expected beyond the 12 trains per day, with

2.0 Alternatives

the potential of up to 22 trains per day by 2017. The existing number of Amtrak trains is ten per day (five northbound, five southbound). North of Dwight, the existing maximum operating speed of 79 mph would be maintained, as defined in the 2003 FEIS and 2004 ROD. No physical improvements and no changes in Amtrak operating characteristics (i.e., number and speed of trains) would be made north of Dwight.

The No Build Alternative would not meet the purpose and need of the project. It would not enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. The single main track and the existing double track would not provide the operating flexibility required in view of the growing rail freight traffic and maintenance of existing Amtrak rail passenger service.

2.3 Detailed Build Alternative

2.3.1 110 mph Passenger Service, New Second Mainline Track and Mazonia Siding Track

The Detailed Build Alternative consists of three components located within the EA project area. The first component will encompass design and construction of improvements to existing trackage that support the extension of the 110 mph speed limit for passenger trains, approximately 36 miles from Dwight, IL to Joliet, IL and includes track upgrades, crossing upgrades, about 10 turnouts, and related work. The second component will encompass the final design and construction of new 2nd mainline track between Joliet and Elwood, IL. The alternative consists of track improvements to the existing double tracks between MP 36.7 to 38.5, and adding a second mainline track between MP 38.5 to 44.69. In approximately the northern two miles of the project area, which are already double-tracked, the track improvements would include the addition of crossovers between the two existing tracks as well as turnout/signal upgrades. Additional construction activities throughout the entire project area include the installation of 21 new turnouts and approximately 6 miles of new track. The third component (Mazonia Siding) is located between MP 55.00 and MP 57.13, and consists of the construction of a new siding track adjacent to the north side of the existing single mainline track. Two new turnouts and approximately 12, 200 feet of track will be constructed for the Mazonia Siding. For all components, the signal system will be upgraded to a Centralized Traffic Control (CTC) signal system and will include a Positive Train Control (PTC) overlay.

2.3.2 At-Grade Crossings

Within the project corridor, there are 38 at-grade crossings (including seven private grade crossings) in the project corridor. Because the UPRR ROW is 100 feet wide at existing grade crossings, the crossing areas are wide enough to accommodate the addition of a second track. All public grade crossings located within the project corridor will be upgraded from the existing warning devices to four-quadrant gates with vehicle detection equipment. For private crossings located on farming property, the crossing is primarily used to move farming equipment from one field to another on farms that are bisected by a rail line. In this situation,

the crossing is proposed to receive a Field-to-Field Treatment that will incorporate a locked, reduced-access gate system. Both the land owner and Emergency Medical Services will have access to release this locked system when no trains are within the approach circuits.

No grade crossings will be required for the third component (Mazonia Siding project). For additional information regarding at-grade crossing treatments, see Section 3.3.1 Transportation.

2.3.3 Culvert and Bridge Crossings

A review of the culverts and bridges in the project corridor was conducted to determine the potential impacts (see appendix E). It was determined that the first component of the project would have a low potential impact on the bridges and culverts since the work is contained within the existing right-of-way and on the same track alignment. The second and third components, would require extending some of the existing culverts and bridges to accommodate the additional embankment required to construct the second main track between Joliet and Elwood (second component) and siding track north of Braidwood (third component). There are no large culverts or bridges located within the third (Mazonia Siding) component. Additional bridges and culverts have been identified as potential replacement, however, the final location and design of these structures is pending approval of funding. If these bridges and culverts are included as part of this project, additional environmental surveys and subsequent documentation will need to be conducted. Also, coordination with the appropriate agencies, for example, Illinois Historic Preservation Agency/State Historic Preservation Officer, US Fish and Wildlife Service and US Army Corps of Engineers (USACE).

Within the second component, there is one large culvert at MP 38.8 and bridges at MP 42.6 and 44.4 where the rail line crosses waterways. These would be modified with the addition of a second track. The existing roadbed on the bridges and approaches would be modified for the second track in accordance with current FRA standards. Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one-track bridge at MP 44.4 with a double track bridge. A conceptual drawing of the proposed replacement structures has been prepared by the UPRR and is included in Appendix D. Additional detail regarding these structures is described below.

Structure Improvement – MP 38.8. The first structure to be widened, at MP 38.8, is an extension of an existing arch top culvert to accommodate the proposed additional track (see photo in Figure 2-1). The UPRR has indicated that an additional temporary construction easement 50 feet wide by 200 feet in length (measured parallel to track) may be needed directly west of the existing UPRR ROW and centered at the culvert location. The land use west of the project site is former industrial and railroad uses. To the east, there is an inactive

quarry. There are no roadways, residences or business adjacent to the site that would be impacted by the construction of the culvert extension.

Figure 2-1. Existing Sugar Run Creek Culvert (MP38.8)

Source: Bing Maps (April 2010)

Structure Improvement – MP 42.6. The second structure to be widened (at MP 42.6), has a span of 11 feet; the current structure is nearly 90 years old (see photo in Figure 2-2). To avoid construction or longer-term impacts on this waterway, the UPRR has indicated that the installation of two 20-foot spans is under consideration, and the process of considering the construction phasing details for the work required at this location is underway.

Regarding access to the work zone, UPRR has proposed that access would be via Millsdale Road, approximately 400 feet north of the bridge site. The UPRR has sufficient ROW to build an access road within their existing property limits, or can temporarily use the new track embankment as the access road.

The bridge site is located on the south side of Joliet in a largely undeveloped area. However, the surrounding area is in transition from an agricultural use to industry and rural residential subdivisions. Primarily, this transition is due to the recent start of construction of the 785-acre UPRR Joliet Intermodal Terminal and the 2,200 acre CenterPointe Intermodal Center (former Joliet Arsenal), which are located west of the railroad ROW. The vacant agricultural parcels surrounding the site are owned by the CenterPointe Joliet Terminal Railroad, LLC, or other development interests. The City of Joliet Zoning Map shows the undeveloped parcel east of the UPRR ROW is zoned as rural

residential. The parcels on the west side of the UPRR ROW are not zoned and have an agricultural use.¹

Figure 2-2. Existing Cedar Creek Bridge (MP 42.6)

Source: Bing Maps (April 2010)

Structure Improvement – MP 44.4. The existing structure at MP 44.4 (see photo in Figure 2-3) consists of two spans – one with a 42-foot length, the other being 56 feet long, for an overall length of 98 feet. The current structure is 104 years old. The UPRR is proposing to replace this structure with a combination of a 52-foot span and a 66-foot span. This would total an overall length on the order of 118 feet, which would avoid additional impacts on Jackson Creek. Furthermore, pilings for the new abutments would be driven outside of the existing ones, which the UPRR notes could then be used as retaining walls. On a preliminary basis, the railroad has also advised that they believe the existing center pier can be extended (with driven piles as foundational support) for the future second track.

If it becomes clear that the existing abutments cannot be used as retaining walls, the UPRR believes the overall bridge length at MP 44.4 would have to be considerably lengthened – to an overall length of around 240 feet. Similarly, if the existing center pier cannot be used, a new row of piling would have to be driven north or south of the existing pier substructure. This option would require adjustment of span lengths as well. Phasing of construction would be required at this location.

¹ City of Joliet Zoning Map accessed May 2009, <http://www.cityofjoliet.info/For-Residents/documents/ZoningMap.pdf>

2.0 Alternatives

Access to the work site at MP 44.4 has been given considerable attention by the UPRR. A major concern at this site is that the bridge is on high fill. If the new track embankment could be built as a first step, this would provide access to the bridge to facilitate construction of the replacement structure. However, if the embankment cannot be built first, on-track equipment would be required to construct the new structure. In this instance, new bents would have to be driven and it is expected that the center pier would have to be removed in order to comply with the no-rise condition at this waterway. The approach and specific site requirements are subject to additional investigation.

Figure 2-3. Existing Jackson Creek Bridge (MP 44.4)

Source: Bing Maps (April 2010)

The UPRR has also given considerable attention to construction staging and timing to ensure that impacts on its neighbors are minimized. A new single-family residential subdivision is located southeast (Meadowbrook Subdivision) and northeast (Wooded Cove Estates) of the Jackson Creek Crossing at MP 44.4. For example, the UPRR noted that construction will be limited to the hours between 7 am and 6 pm. In addition, construction staging areas for the extended 2nd main track project would be co-located with the UPRR's Joliet Intermodal Facility. Construction equipment and materials required for the project have been proposed to be staged immediately adjacent to the railroad's property at an existing grade crossing near the project site.

2.3.4 Right-of-Way and Construction Requirements

No displacements are expected as the majority of the track improvements would occur within the UPRR's ROW between Joliet and Dwight. Temporary easements may need to be obtained by UPRR for construction access and to stage materials; however, these easements will not require the relocation of businesses or residences, or impact sensitive environments.

2.3.4.1 110 mph Project Corridor between MP 36.7 and MP 72.81

The first component will encompass the extension of the 110 mph speed limit for passenger trains approximately 36 miles from Joliet, IL to Dwight, IL. Temporary easements could be required between MP 36.7 and 72.81 for track and signal work. Track construction would require earthen fill at some locations and excavation at other locations for subgrade construction. Staging areas for construction equipment, materials, and spoils would be located within the UPRR's ROW.

Construction activities for the 110 mph passenger service will include use of a Track Renewal Train (TRT) to install new rail and concrete ties along the existing mainline. This work will also include resurfacing of the stone ballast, renewal of crossing surfaces and approaches, and upgrade of the signals and crossing warning systems.

2.3.4.2 UPRR's 2nd Mainline Track Project between MP 36.7 and MP 44.69

Temporary easement or ROW acquisition could be required at the stream crossings of the Sugar Run Creek at MP 38.8, Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the single track bridge at MP 44.4 with a double track bridge. Additional culvert and bridges within the Joliet to Dwight project corridor structures are categorized as projects that would require environmental remediation through improvements to existing railroad track for purpose of preventing or correcting environmental pollution of soil, air or water. Culvert work with extensions would be conducted at MP 40.49, MP 40.51, MP 41.8, MP 42.95, MP 43.2, MP 43.58 and MP 44.10. Culvert work without extensions or replacement would be conducted at MP 39.35, MP 41.90, MP 41.97, MP 42.20, MP 43.9 and MP 44.90 as shown in Appendix E.

Track construction would require earthen fill at some locations and excavation at other locations for subgrade construction. Staging areas for construction equipment, materials, and spoils would be limited to the culvert and bridges within the UPRR ROW between Joliet and Dwight, or within the UPRR ROW at the Joliet Intermodal Facility which is currently under operation. The intermodal facility site is located 2,000 feet west of the UPRR ROW near Laraway and Brandon Roads, between Joliet and Elwood.

2.3.4.3 Mazonia Siding Track between MP 55.0 and MP 57.13

Temporary easements may need to be obtained by UPRR for construction access and to stage materials; however, these easements will not require the relocation of businesses or residences, or impact sensitive environments. The existing culverts at MP 56.3 and 55.7 would be replaced. An easement would be required at MP 55 and MP 57.13 to construct construction pads for new turnouts. Work on these structures would be limited to the turnout area and culverts within the UPRR ROW.

2.0 Alternatives

2.4 Preferred Alternative

2.4.1 Benefits of the Preferred Alternative

The Preferred Alternative is the Detailed Build Alternative (described in detail in Section 2.3 above), which consists of the 110 mph passenger service, UPRR's 2nd Mainline Track Project and Mazonia Siding Track Project. This project is proposed to proceed as part of the HSIPR Program for Final Design (FD)/Construction using FRA funding, as well as local and railroad resources.

This project would be of immediate benefit to the rail passenger and freight services using this line today. Further, major progress has been achieved in terms of environmental and engineering activities, allowing the project to be procured and installed in an expeditious manner. Both IDOT and the UPRR are committed to ensure that the benefits of this project are made available as soon as possible. The rail carrier has indicated that it is fully behind this project and is prepared to initiate work.

The proposed improvements would facilitate the implementation of the overall improvements within the UPRR Joliet Subdivision between Joliet and Dwight. Having the extended length of second main track would increase the options a dispatcher would have available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line.

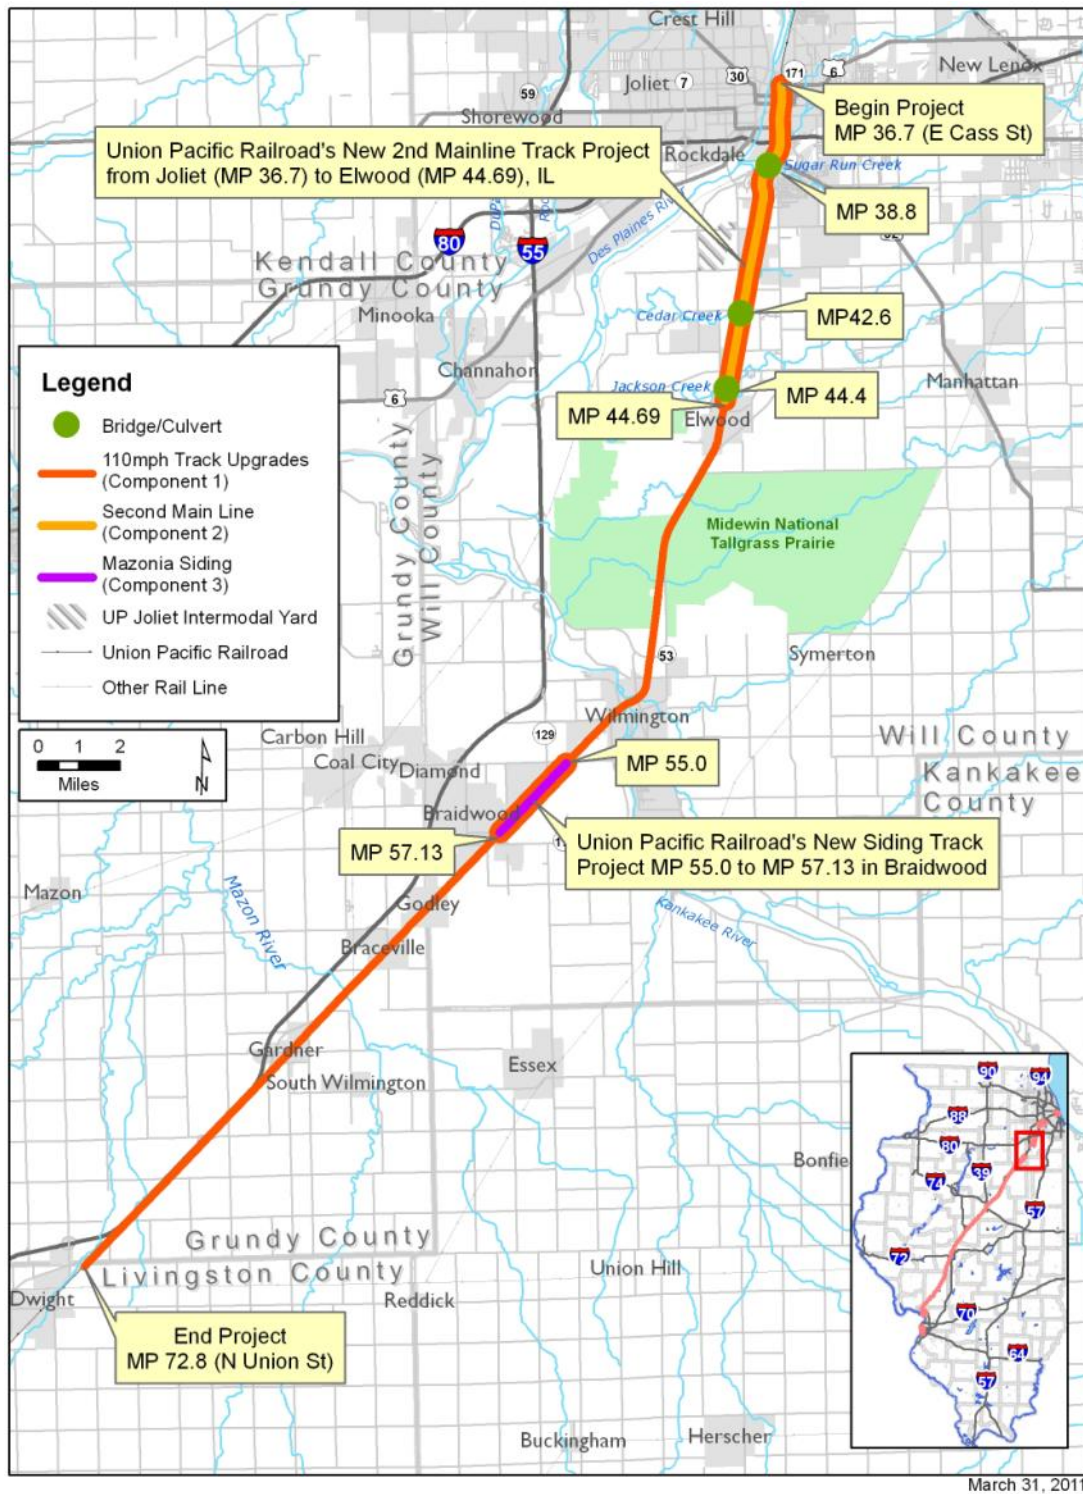

The proposed Mazonia Siding Track improvements between MP 55.0 to 57.13, would improve fluidity of train movement, decrease delays in passenger trains, and reduce congestion in the area between Braceville and Joliet. The siding track will also improve the efficiency of the railroad by allowing for train meets and sorting of cars for freight trains as well as an area for storing trains during maintenance incidents.

As part of the FRA Track 1a application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, as mentioned earlier, the freight train speeds on this section of line would not increase due to this work and continue to operate at at 60 mph.

The upgrade to CTC with a PTC overlay in the improvement zone would enhance the safety of train operations through the zone, including those grade crossings within the project limits. The signal upgrade project would also improve operating conditions in the Joliet area, including expediting the hand-off of dispatch control to/from the Canadian National, on whose tracks the existing "Lincoln Service" and "Texas Eagle" trains run to/from Chicago.

Figure 2-4 shows the Preferred Alternative (Detailed Build Alternative).

Figure 2-4. Preferred Alternative

2.4.2 Relationship of Preferred Alternative to Chicago-St. Louis High Speed Rail

It is recognized that the proposed improvements included herein as the Preferred Alternative would enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight for the existing and expected near-term freight and Amtrak services. It is also recognized that these improvements would offer similar capacity and operational benefits if the existing Amtrak service were augmented or supplanted by the proposed High-Speed Rail passenger service. By offering additional passing, routing and storage opportunities for freight and passenger trains, the Preferred Alternative improvements are fully complementary to similar St. Louis to Dwight improvements of the 2003 FEIS Selected Alternative.

The 110 mph passenger service, UPRR's 2nd Mainline Track Project and Mazonia Siding Tract Project has independent utility in addressing capacity and operational issues for existing and expected near-term freight and Amtrak services, and does not preclude other options to address the Chicago –Dwight portion of High Speed Rail if further corridor studies are initiated or advanced under NEPA.

Consistent with the FRA's requirements for the original round of HSIPR Program Track 1a projects, the State of Illinois intends to assure that all construction work is scheduled to be completed by the fall of 2012 or as future FRA guidance demands.

The portion of work included by the 110 mph passenger service, 2nd mainline track work and Mazonia siding work, signal improvements, culvert/bridge extensions (between MP 36.8 to 44.69) and new siding (between MP 55.0 and MP 57.13) is estimated at approximately \$280 million (Fiscal Year 2011 dollars). It is anticipated that the State of Illinois and the Union Pacific Railroad will provide funds to initiate this project; however, a re-submittal of an application for future rounds of ARRA funding may occur.

The Preferred Alternative would enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. The proposed second track and siding track would provide for immediate improvements to existing Amtrak service. Acknowledged "choke points" in this corridor would be alleviated, and two trains would be able to utilize the corridor at the same time. This would provide for improved operation of existing and future freight and Amtrak passenger trains within the corridor, as meets with UP freight trains could be better scheduled and accommodated.

Chapter 3

Environmental Resources, Impacts and Mitigation

3.0 ENVIRONMENTAL RESOURCES, IMPACTS AND MITIGATION

3.1 Physical Environment

The project area was inventoried for environmental resources. Included in this section is a discussion of the resources potentially impacted by the proposed 110 mph passenger service (MP 36.7 to 72.8), 2nd Mainline Track (MP 36.7 to 44.69) and Mazonia Siding (MP 55.0 to 57.13) in the project corridor. Where appropriate, mitigation measures are identified.

This chapter has been prepared as an EA subsequent to the ROD that was received for the FEIS for the Chicago-St. Louis High-Speed Rail Project in 2003. As such, the Final EIS (FEIS) and Draft EIS (DEIS) can be referenced for additional information on any of the topics discussed in this section and Chicago-St. Louis corridor.

3.1.1 Air Quality and Energy

"Air Pollution" is a general term that refers to one or more chemical substances that degrade the quality of the atmosphere. Individual air pollutants degrade the atmosphere by reducing visibility, damaging property, reducing the productivity or vigor of crops or natural vegetation, and/or reducing human or animal health. Air quality is a term used to describe the amount of air pollution the public is exposed to.

U.S. Environmental Protection Agency

Air quality in the United States is governed by the Federal Clean Air Act (CAA) and is administered by the United States Environmental Protection Agency (USEPA). As required by the CAA and the 1990 Clean Air Act Amendments (CAAA), the USEPA has established National Ambient Air Quality Standards (NAAQS) for six major air pollutants, as shown in Table 3-1. These pollutants, known as criteria pollutants, are carbon monoxide (CO), lead (Pb), nitrogen dioxide (NO₂), particulate matter (PM₁₀, PM_{2.5}), ozone (O₃), and sulfur dioxide (SO₂). The "primary" standards have been established to protect the public health. The "secondary" standards, intended to protect the nation's welfare, account for air pollutant effects on soil, water, visibility, materials, vegetation, and other aspects of the general welfare.

In addition to the criteria pollutants, USEPA also regulates air toxics. Mobile source air toxics (MSATs) are compounds emitted from highway vehicles and non-road equipment that are known or suspected to cause cancer or other serious health and environmental effects. The CAAA listed 188 Hazardous Air Pollutants from transportation. A group of 93 compounds emitted from mobile sources are listed in the USEPA Integrated Risk Information System. USEPA identified seven compounds with significant contributions from mobile sources that are among the national and regional-scale cancer risk drivers. These are acrolein, benzene, 1,3-butadiene, diesel particulate matter plus diesel exhaust organic gases (diesel PM), formaldehyde, naphthalene, and polycyclic organic matter.

3.0 Environmental Resources, Impacts and Mitigation

Table 3-1. National Ambient Air Quality Standards

Pollutant	Primary Standards		Secondary Standards	
	Level	Averaging Time	Level	Averaging Time
Carbon Monoxide (CO)	9 ppm (10 mg/m ³)	8-hour ⁽¹⁾	None	
	35 ppm (40 mg/m ³)	1-hour ⁽¹⁾		
Lead (Pb)	0.15 µg/m ³ ⁽²⁾	Rolling 3-Month Average	Same as Primary	
	1.5 µg/m ³	Quarterly Average	Same as Primary	
Nitrogen Dioxide (NO ₂)	0.053 ppm (100 µg/m ³)	Annual (Arithmetic Mean)	Same as Primary	
	0.100 ppm	1-hour ⁽³⁾	None	
Particulate Matter (PM ₁₀)	150 µg/m ³	24-hour ⁽⁴⁾	Same as Primary	
Particulate Matter (PM _{2.5})	15.0 µg/m ³	Annual ⁽⁵⁾ (Arithmetic Mean)	Same as Primary	
	35 µg/m ³	24-hour ⁽⁶⁾	Same as Primary	
Ozone (O ₃)	0.075 ppm (2008 std)	8-hour ⁽⁷⁾	Same as Primary	
	0.08 ppm (1997 std)	8-hour ⁽⁸⁾	Same as Primary	
	0.12 ppm	1-hour ⁽⁹⁾	Same as Primary	
Sulfur Dioxide (SO ₂)	0.03 ppm	Annual (Arithmetic Mean)	0.5 ppm (1300 µg/m ³)	3-hour ⁽¹⁾
	0.14 ppm	24-hour ⁽¹⁾		

⁽¹⁾ Not to be exceeded more than once per year.

⁽²⁾ Final rule signed October 15, 2008.

⁽³⁾ To attain this standard, the 3-year average of the 98th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 0.100 parts per million (ppm) (effective January 22, 2010).

⁽⁴⁾ Not to be exceeded more than once per year on average over 3 years.

⁽⁵⁾ To attain this standard, the 3-year average of the weighted annual mean PM_{2.5} concentrations from single or multiple community-oriented monitors must not exceed 15.0 micrograms per cubic meter of air (µg/m³).

⁽⁶⁾ To attain this standard, the 3-year average of the 98th percentile of 24-hour concentrations at each population-oriented monitor within an area must not exceed 35 µg/m³ (effective December 17, 2006).

⁽⁷⁾ To attain this standard, the 3-year average of the fourth-highest daily maximum 8-hour average ozone concentrations measured at each monitor within an area over each year must not exceed 0.075 ppm. (effective May 27, 2008)

⁽⁸⁾ (a) To attain this standard, the 3-year average of the fourth-highest daily maximum 8-hour average ozone concentrations measured at each monitor within an area over each year must not exceed 0.08 ppm.

(b) The 1997 standard—and the implementation rules for that standard—will remain in place for implementation purposes as USEPA undertakes rulemaking to address the transition from the 1997 ozone standard to the 2008 ozone standard.

(c) USEPA is in the process of reconsidering these standards (set in March 2008).

⁽⁹⁾ (a) USEPA revoked the 1-hour ozone standard in all areas, although some areas have continuing obligations under that standard ("anti-backsliding").

(b) The standard is attained when the expected number of days per calendar year with maximum hourly average concentrations above 0.12 ppm is ≤ 1.

Most air toxics originate from human made sources, including on road mobile sources, non-road mobile sources (e.g., trains), area sources (e.g., dry cleaners), and stationary sources (e.g., factories or refineries).

Also of concern are greenhouse gases (GHG) that trap heat in the atmosphere. These gases are necessary to life as we know it, since they keep the planet's surface warmer than it otherwise would be. As concentrations of greenhouse gases increase, however, the Earth's temperature rises. This is known as the "Greenhouse Gas Effect." Effects of these rising temperatures include climate change and rising sea levels. For additional information about the USEPA, the reader can contact its general internet address found at www.epa.gov. Additional information on the activities of USEPA's Office of Mobile Sources can be found at www.epa.gov/oms/.

There are no changes proposed in the number of Amtrak trains. The speed of Amtrak trains in the project corridor would increase from 79mph to 110 mph. As a result, the Preferred Alternative is projected to affect air quality levels when compared to the No-Build. As result, an air quality analysis was performed.

This section describes the existing air quality conditions in Will, Grundy and Livingston County and the potential effects during construction of the preferred alternative. The criteria pollutants of concern are PM₁₀ and PM_{2.5} from the diesel train and construction equipment emissions. Additional pollutants include CO from emissions from roadway vehicles, and O₃ precursors (volatile organic compounds [VOCs] and nitrogen oxides [NO_x]). The potential impacts on GHG from diesel trains and construction equipment is also considered.

3.1.1.1 Existing Conditions

Attainment Status / Regional Air Quality Conformity

Section 107 of the 1977 CAAA requires that the USEPA publish a list of all geographic areas in compliance with the NAAQS, plus those not attaining the NAAQS. Areas not in NAAQS compliance are deemed non-attainment areas. Areas that have insufficient data to make a determination are deemed unclassified, and are treated as being attainment areas until proven otherwise. An area's designation is based on the data collected by the state monitoring network on a pollutant-by-pollutant basis.

The project area is located in Will, Grundy and Livingston County, Illinois. Will and Grundy County are located in the Chicago Metropolitan Region. Livingston County is primarily a rural county. As shown in Table 3-2, the USEPA has classified Livingston County as an attainment area for all pollutants. Will and Grundy counties are classified as attainment areas for CO, PM₁₀ and Pb, and nonattainment areas for O₃ and PM_{2.5}.

3.0 Environmental Resources, Impacts and Mitigation

Table 3-2. Project Area Federal Attainment Status

Pollutant	Will County, IL	Grundy County, IL	Livingston County, IL
Carbon Monoxide (CO)	Attainment	Attainment	Attainment
Lead (Pb)	Attainment	Attainment	Attainment
Nitrogen Dioxide (NO ₂)	Attainment	Attainment	Attainment
Particulate Matter (PM ₁₀)	Attainment	Attainment	Attainment
Particulate Matter (PM _{2.5})	Nonattainment	Nonattainment	Attainment
Ozone (O ₃)	Nonattainment	Nonattainment	Attainment
Sulfur Dioxide (SO ₂)	Attainment	Attainment	Attainment

Source: Environmental Protection Agency (EPA), 2011

The CAA requires that a State Implementation Plan (SIP) be prepared for each nonattainment area, and a maintenance plan be prepared for each former nonattainment area that subsequently demonstrated compliance with the standards. The CAAA requires federal agencies to ensure that their actions conform to the appropriate SIP. The SIP provides for implementation, maintenance, and enforcement of the NAAQS. Prior to approval or funding by a federal agency, a proposed project must demonstrate compliance with USEPA's Conformity Rule by determining that it would not cause or exacerbate exceedance of an NAAQS. As a project being developed under FRA, this project falls under the General Conformity Rule, which requires a conformity determination for each pollutant where the total of direct and indirect emissions in a nonattainment or maintenance area caused by a federal action would equal or exceed EPA-specified significant threshold values. In Illinois, general conformity criteria and procedures are set forth in 35 Illinois Administrative Code 255. The significance rates for the project area are 100 tons per year for VOCs and NO_x (i.e., ozone precursors) and for PM_{2.5}.

Ambient Air Quality

The project is located within the Chicago-Gary-Lake Co., IL-IN 8-hr ozone nonattainment area and the PM_{2.5} nonattainment area. Air quality monitors in Will County are located in Joliet, Channahon, and Wilmington. No air quality monitors are located in Grundy or Livingston County. The last three years of monitored data from the Will County monitors are shown in Table 3-3. As these data show, no exceedances of the NAAQS for PM₁₀, NO₂, and SO₂ standards were measured in Will County. One measurement exceeding the current 24-hour PM_{2.5} standard, was monitored in 2007 in Joliet and two levels exceeding the 8-hour ozone standard in 2006 in Wilmington. Both exceedances did not constitute a violation of the NAAQS, because values shown in the table do not correspond to the NAAQS time periods. The 24-hour PM_{2.5} standard is a three-year average of the 98 percentile values and the 8-hour ozone standard is a three-year average of the fourth highest values.

Table 3-3. Will County Air Quality Monitored Data (2006-2008)

Pollutant		Standard	Rte. 6 & Young Rd. Channahon			Midland & Campbell Sts. Joliet			36400 S. Essex Rd. Wilmington

3.0 Environmental Resources, Impacts and Mitigation

3.1.1.2 Potential Impacts

Pollutants that can be traced principally to diesel locomotives and construction equipment are relevant to the evaluation of the project's impacts; these pollutants include CO, VOC, NO_x, O₃, PM₁₀, and PM_{2.5}. Transportation sources account for a small percentage of regional emissions of SO₂ and Pb; thus, a detailed analysis is not required. The project elements that could adversely affect air quality levels include diesel locomotive emissions from moving and idling, emissions from diesel train service at maintenance and storage facilities, and emissions from construction.

Volatile organic compounds and NO_x emissions from these sources are a concern primarily because they are precursors in the formation of ozone and particulate matter. Ozone is formed through a series of reactions that occur in the atmosphere in the presence of sunlight. Since the reactions are slow and occur as the pollutants are diffusing downwind, elevated ozone levels often are found many miles from the sources of the precursor pollutants. Therefore, the effects of VOC and NO_x emissions generally are examined on a regional or "mesoscale" basis.

PM₁₀ and PM_{2.5} impacts are both regional and local. A significant portion of particulate matter, especially PM₁₀, comes from disturbed vacant land, construction activity, and paved road dust. PM_{2.5} also comes from these sources. Motor vehicle exhaust, particularly from diesel construction vehicles, is also a source of PM₁₀ and PM_{2.5}. PM₁₀, and especially PM_{2.5}, can also be created by secondary formation from precursor elements such as SO₂, NO_x, VOCs and ammonia (NH₃). Secondary formation occurs due to chemical reaction in the atmosphere generally downwind some distance from the original emission source. Thus, it is appropriate to predict concentrations of PM₁₀ and PM_{2.5} on both a regional and a localized basis.

CO impacts are generally localized. Even under the worst meteorological conditions and most congested traffic conditions, high concentrations are limited to a relatively short distance (300 to 600 feet) of heavily traveled roadways or rail corridors. The project would not change automobile or truck traffic patterns within the project area. As result, these impacts are not analyzed. However, emissions from construction vehicles and diesel locomotives can also be major sources of CO. Consequently, it is appropriate to predict concentrations of CO on both a regional and a localized or "microscale" basis for the proposed improvements within the project corridor.

MSAT impacts are both regional and local. On September 30, 2009 Federal Highway Administration (FHWA) released *Interim Guidance Update on Air Toxic Analysis in NEPA Documents*. According to these documents, regardless of the alternative chosen, MSAT emissions will likely be lower than present levels in the design year as a result of EPA's national control programs that are projected to reduce annual MSAT emissions by 72 percent between 1999 and 2050. Local conditions may differ from these national projections in terms of fleet mix and turnover, vehicle miles of travel (VMT) growth rates, and local control measures. However, the magnitude of the USEPA-projected reductions is so great

(even after accounting for VMT growth) that MSAT emissions in the study area are likely to be lower in the future in nearly all cases. This project will not result in changes in traffic volumes, vehicle mix, basic project location, or any other factor that would cause an increase in MSAT impacts of the project from that of the no-build alternative. As such, this project has not been linked with any special MSAT concerns.

Air Quality during Project Operation

Under the current schedules, there are about 15 trains per day operating over this section of line, including 10 Amtrak trains and five UPRR freights (a combination of local and through trains). The number of Amtrak trains on the mainline track would remain the same. However, the speed of passenger trains would increase from 79 mph to 110 mph in the project corridor. Freight trains on the mainline track would continue to operate at 60 mph.

Potential Regional Impacts

While the proposed project would increase diesel locomotive emissions due to speed increase, these increases may be off-set by small decreases in the travel times and smaller emissions from the newer locomotives.

As portions of the project area are classified as nonattainment for O₃ and PM_{2.5}, the regional impacts are quantified to ensure that project-related emission increases do not exceed the applicable General Conformity thresholds. Table 3-4 presents the preliminary estimates of the regional emissions generated by the project. Based on preliminary estimates, emissions of pollutants of concern are below the applicability thresholds and the General Conformity rule does not apply.

Table 3-4. Emissions Generated by the Project (tons/year)

Scenario	CO	NO _x	VOC	PM ₁₀	PM _{2.5}	CO ₂
No Build Alternative	28.8	111.3	5.1	3.7	3.5	26.6
Build Alternative	30.8	119.1	5.6	3.6	3.5	28.3
Change	2.0	7.8	0.5	-0.1	-0.1	1.7

Source: Air Quality Modeling Analysis, see Appendix F

Potential Local Impacts

Along the Rail Right-of-Way. The project will increase diesel emissions (PM₁₀, PM_{2.5}) along the train tracks. However, the speed increase (and therefore, the shorter residence time) and the purchase of newer locomotives with stricter emission limits are likely to off-set this increase. It is recommended that an analysis be conducted, using emission factors for diesel locomotives and USEPA's AERMOD dispersion algorithm, to estimate the potential impacts of these emissions at the sensitive land uses (residences, playgrounds, etc.) near the rail line. It is not anticipated that the results of this analysis would predict a measurable increase in PM_{2.5} concentrations near rail right-of-way and it is not likely, therefore, that the project operations would cause or exacerbate a violation of the applicable air quality standards.

3.0 Environmental Resources, Impacts and Mitigation

At Train Stations. The project is not anticipated to increase vehicular (automobile) traffic near the proposed stations locations. It is unlikely, therefore, that the project would cause significant air quality impacts.

At-Grade Crossings. The project should not increase vehicular delays at at-grade crossings and it is unlikely that it would result in any substantial impact on air quality levels.

Maintenance/Storage Yards. There would be no increase to maintenance and storage requirements due to this action. Therefore, it is unlikely that there would be significant impact from this action to the nearby sensitive land uses.

Construction Impacts

Temporary impacts are possible that may be caused by dust and exhaust emissions generated by equipment during construction. Equipment would include the use of trucks, backhoes, graders, compactors, bobcats, cranes, loaders, and compressors. State and local regulations regarding dust control and other air quality emission reduction controls would be followed.

It is unlikely that the construction of the project, which would follow state and local regulations regarding construction activities and equipment, would cause a violation of the applicable standards. The UPRR will comply with local regulations to suppress dust emissions as necessary.

GHG emissions would also be generated during the construction phase of the project. However, these emissions are likely to be relatively minor given the limited duration of the construction activities. Construction activities are proposed to commence in fall 2011 and be completed by spring 2012.

3.1.1.3 Mitigation

Project Construction

To control local air pollution impacts during project construction, a permit may be required for portable bituminous and concrete plants that may be used in project construction. However, these materials would likely originate from existing permitted plants and would be delivered to the construction site.

Construction mitigation includes strategies that reduce engine activity or reduce emissions per unit of operating time, such as reducing the numbers of trips and extended idling. Verified emissions control technology retrofits or fleet modernization of engines for construction equipment could be appropriate mitigation strategies. The Illinois Environmental Protection Agency (IEPA) request that construction specifications require the use of either later model construction equipment meeting the more stringent Tier 3 emission standards or equipment that has been retrofitted with diesel oxidation catalysts or

particulate filters. The use of clean fuels, such as ultra-low sulfur diesel, biodiesel, or natural gas also can be a very cost-beneficial strategy.

Project Operation

Travel demand management strategies and techniques that reduce overall vehicle-mile of travel; reduce a particular type of travel, such as long-haul freight or commuter travel; or improve the transportation system's efficiency will mitigate MSAT emissions. Examples of such strategies include congestion pricing, commuter incentive programs, and increases in truck weight or length limits. Operational strategies that focus on speed limit enforcement or traffic management policies may help reduce MSAT emissions even beyond the benefits of fleet turnover. Well-traveled highways with high proportions of heavy-duty diesel truck activity may benefit from active Intelligent Transportation System programs, such as traffic management centers or incident management systems. Similarly, anti-idling strategies, such as truck-stop electrification can complement projects that focus on new or increased freight activity.

Long-term air quality on both a microscale and mesoscale levels are expected to improve once the project is operational due to improved train operations and reduction of travel time between Joliet and Dwight. Similarly, the 2nd mainline track and Mazonia Siding improvements would reduce locomotives idling for other trains to pass in the corridor. Moreover, USEPA regulations for vehicle engines and fuels will cause overall MSAT emissions to decline significantly over the next several decades.

3.1.1.4 Energy

Current energy consumption that results in pollutant emissions occurs with the four basic transportation modes used for travel in the project corridor — air, rail, bus, and automobile. In general, Amtrak passengers account for about 2 percent of person-kilometers (person-miles) traveled in the corridor, while automobile traffic accounts for approximately 84 percent. Airlines account for about 13 percent of travel. In addition, other vehicular transport by rail and motor vehicles results in energy consumption and resultant emissions.

The proposed project would enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. The number of Amtrak trains would remain the same and the speed would increase from 79 mph to 110 mph in the project corridor. UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of the proposed improvements. However, freight train speeds on this section of line would not increase due to this work and continue to operate at at 60 mph.

Energy Consumption during Project Construction

No-Build Alternative: The No-Build alternative would not require construction. Therefore, no changes in energy consumption are expected.

3.0 Environmental Resources, Impacts and Mitigation

Preferred Alternative: During construction of the improvements, additional energy would be expended beyond what would be used for project operation. This additional energy would be consumed on a short-term basis by construction of improvements and by construction-related delays to existing rail traffic. However, once the project is operational, long-term energy savings are expected from significantly improved train operations and reduction of travel time between Joliet and Dwight.

Energy Consumption during Project Operation

Passenger rail service under the No-Build and Preferred Alternatives would be a continuation of the existing 10 daily round trips between Joliet and Dwight, with the speed of trains increasing from 79 mph to 110 mph. Increased ridership resulting from the normal travel growth in the corridor would be accommodated by adding more cars to existing trains. The additional energy required to haul added weight could be compensated for by use of more efficient locomotives in the future.

3.1.2 Floodplains

3.1.2.1 Existing Conditions

Federal protection of floodplains is afforded by Executive Order 11988, "Floodplain Management," and by implementation of federal regulations under 44 Code of Federal Regulations (CFR) 9.00. These regulations direct federal agencies to undertake actions to avoid impacts on floodplain areas by structures built in flood-prone areas. In accordance with these federal directives, the FHWA has enacted federal-aid policy guidance and regulations under 23 CFR 650 and the FRA has established procedures under FRA Docket No. EP-1, Notice 5 "Procedures for Considering Environmental Impacts".

The Federal Emergency Management Agency (FEMA) has primary responsibility for identifying flood-prone areas. FEMA conducted flood studies for the project areas in Will, Grundy and Livingston County to locate the extent of the flooding from a 100-year storm.

There are ten floodplains within the project corridor, primarily associated with the stream crossings as summarized in Table 3-5. County information was obtained from the FEMA website and included in Table 3-5. Appendix D shows the floodplain map for the project corridor within Will County. Floodplain maps were not available for Grundy or Livingston.

3.1.2.2 Potential Impacts

The No-Build alternative would not impact 100-year floodplains. The build alternative may permanently and temporarily impact 100-year floodplains within the project corridor. Culvert replacement and bridge replacement and/or widening may cause both permanent and temporary impact to these floodplains depending on the final engineering plans.

Figure 3-1. Site Location Map

3.0 Environmental Resources, Impacts and Mitigation

Table 3-5. Floodplains

County	Name	Location	Type
Will	Hickory Creek Floodplain	Immediately south of Interstate 80	Zone AE
Will	Sugar Run Floodplain	West of the intersection of Chicago Street and Mills Road	Zone AE
Will	Cedar Creek Floodplain	North of Sharp Road	Zone A
Will	Cedar Creek Middle Tributary Floodplain	North and South of Millsdale Road	Zone A
Will	Cedar Creek Unnamed Tributary	Approximately 3000 feet south of Millsdale Road	Zone A
Will	Jackson Creek Floodplain	Approximately 4000 feet south of Manhattan Road	Zone AE
Will	Jackson Creek Tributary Floodplain	Approximately 1000 feet north of Diagonal Road	Zone A
Grundy	Mazon River Floodplain	Approximately 2400 feet north of County Road 6000 South	Zone A4, Zone B
Grundy	Illinois Central Gulf Railroad Ditch	City of Gardner – south/east side of railroad tracks	Zone A1
Livingston	Gooseberry Creek Floodplain	Southern end of project limits – north side of Village of Dwight	Zone AE

3.1.2.3 Permits

A local stormwater permit will be required for all hydraulic structures. A permit will also be required from the Illinois Department of Natural Resources (IDNR) for the structure replacement/extensions. Individual IDNR permits will be required for the structures located within a FEMA designated floodway, while the other culverts along the corridor will comply with the non-notification Statewide Permit requirements.

3.1.2.4 Mitigation

Temporarily impacted areas would be restored following construction. Permanent impacts would require proper sizing of hydraulic structures and compensatory storage where required.

3.1.3 Noise and Vibration

The assessment of the potential for the project to cause noise and vibration impacts was accomplished by applying the procedures provided by the FRA *High-Speed Ground Transportation Noise and Vibration Impact Assessment* guidance manual (U.S. Department of Transportation [USDOT] Federal Railroad, October 2005). The assessment included evaluating noise and vibration from train operations, which includes both rolling stock noise along the corridor and horn noise at the at-grade crossings.

The FRA screening procedure is conservative and is used to identify sensitive receptors where the next level of analysis is appropriate. Using the FRA screening procedure approach, sensitive receptors with the potential for noise and vibration impacts are identified. Receptor locations within the screening distance are then evaluated using the general assessment level of analysis. If impacts are still identified in the general assessment, a detailed analysis would be warranted.

The proposed project improvements were evaluated for the Joliet (MP 36.7) to Dwight (MP 72.8) corridor. The overall improvements include increasing the passenger train speeds from 79 mph to 110 mph, double tracking portions between Joliet and Elwood (MP 38.50 to MP 45.50), and constructing the Mazonia siding (MP 55.0 to 57.13). Existing passenger train speeds less than 79 mph were evaluated at the current speed limit and not increased to 110 mph in the Build scenario. The noise and vibration assessment in the areas of the proposed double track section evaluated potential impacts with half of the train traffic volumes using the new track while the other half continues to use the existing track.

3.1.3.1 Noise Evaluation

Screening Noise Evaluation

The FRA screening procedure identifies a screening distance for both obstructed and unobstructed urban conditions and for quiet suburban/rural areas. Given the generally rural nature of the corridor, the quiet suburban/rural area screening distance of 500 feet was used to screen the project corridor. Sensitive receptors were identified along the project corridor and include single-family residences (SFR), multi-family residences (MFR), churches, schools, and parks. Thirty four receptor locations were selected to represent the various land uses along the corridor and are depicted in Appendix C.

Within the corridor, there are 26 public at-grade railroad crossings. All of these at-grade crossings are not within a 24-hour quiet zone and therefore train operators are required to use train horns on approach to the crossing. Nineteen of the receptors are within ¼ mile of the crossings and therefore the evaluation includes horn noise in the assessment for these receptors. The exception to this is the two crossings in Elwood that are designated as 24-hour quiet zones. Horn noise was not included in this part of the assessment for the Elwood area.

General Noise Assessment

The general assessment was conducted to evaluate the potential impacts associated with the proposed project improvements (increased speed, double track sections, and the Mazonia siding). As the corridor is an active rail corridor, the existing noise environment includes the existing 10 passenger trains and the five freight trains. Based on the location of the receptors to the tracks and the rural land use, the dominant noise sources along the corridor are the existing rolling train noise and the locomotive horns near the at-grade crossings. Due to the project corridor being an active rail corridor with the trains being the dominant

noise source, the impact evaluation is based on the comparison of the existing train noise and the train noise under the proposed build condition. As the freight train noise is a contributor to the noise environment, the freight train traffic is included in the evaluation. Table 3-6 summarizes the train traffic information for the existing and build condition.

Table 3-6. Existing Train Traffic

Train Traffic Information	Passenger Train Traffic	Freight Train Traffic
No. of Trains (7am to 10pm)	9	3
No. of Trains (10pm to 7am)	1	2
Number of Locomotives	1	2
Number of Cars	6	50
Train Speed Existing, mph	79	60
Train Speed Build, mph	110	60

Source: UPRR; Amtrak Schedule (2011)

In addition to the rolling stock noise, horn noise was included in the evaluation at the grade crossings where sensitive receptors were identified, and idling locomotive noise was included in the evaluation along the proposed Mazonia siding location. Based on the FRA regulations for horn noise, operators shall not apply the horn more than $\frac{1}{4}$ mile from the crossing based on the operating speeds of 60 mph or greater. Therefore, horn noise was evaluated for receptors within $\frac{1}{4}$ mile of the at-grade crossings. Table 3-7 summarizes the general assessment results for the project corridor.

Based on the general assessment for the proposed improvements, noise impacts associated with the proposed project are not anticipated. Generally, the increased passenger train speed increases the rolling stock noise levels by an average 2 weighted decibels (dB(A)). However, the freight train noise is the dominant noise source in the corridor and therefore the overall noise levels remain constant as there is generally no change in freight noise between the existing and build scenarios. Additionally, the increased passenger train speed reduces the overall train horn noise as the duration of the horn noise is shorter at the higher speeds. A detailed noise analysis and a noise abatement evaluation are therefore not warranted as no impacts have been identified.

Construction Noise

Trucks and machinery used for construction produce noise which may affect some land uses and activities during the construction period. Residents along the corridor would at some time experience perceptible construction noise from implementation of the project. To minimize or eliminate the effect of construction noise on these receptors, time restrictions will be used to limit the period of exposure to construction noise, with construction activity only occurring from 7 a.m. to 6 p.m.

Table 3-7. General Assessment Noise Analysis Results

Receptor Number	Dist. to Existing Track, feet	Horn Noise Included	Receptor Type	Noise Metric	Project Noise Levels, dB(A)		Build Increase Over Existing, dB(A)	Allowed Increase (Moderate Impact), dB(A)	Impact Determination

* 24-hour Quiet Zone location

3.0 Environmental Resources, Impacts and Mitigation

3.1.3.2 Vibration Evaluation

Screening Vibration Evaluation

The screening assessment for potential vibration effects was based on land use coupled with an appropriately conservative screening distance obtained from the FRA guidance manual. The screening distance for residential land uses with infrequent events along a corridor with speeds between 100 mph and 200 mph is 100 feet. Sensitive receptors identified within this screening distance were evaluated for potential vibration impacts.

General Vibration Evaluation

Based on the vibration screening evaluation, sensitive receptors exist within the vibration screening distance (100 feet). The FRA general assessment procedures for vibration were used to predict the vibration level at the identified receptor locations. Table 3-8 summarizes the general assessment analysis for vibration.

Table 3-8. Ground-borne Vibration General Assessment

Receptor No.	Dist. to Existing Track, ft	Existing Vibration Level, VdB	Build Vibration Level, VdB	Increase in Vibration, VdB	FRA Criteria (Infrequent Events), VdB	Impact Determination
R4	32	88	91	3	80	Yes
R14	95	80	83	3	80	Yes
R21	25	88	88	0	80	No
R29	73	82	85	3	80	Yes
R31	76	82	85	3	80	Yes
R32	87	90	90	0	80	No
R33	85	90	90	0	80	No
R34	69	79	79	0	83	No

Based on the ground-borne vibration analysis for the corridor, vibration impacts are anticipated as part of the proposed project due to the predicted vibration level exceeding the vibration criteria and also due to the vibration level increasing 3 velocity decibels (VdB) over the existing vibration levels. The vibration impacts are generally associated with the speed increase from 79 mph to 110 mph. There are no ground-borne noise impacts associated with vibration as the ground-borne noise levels are less than the FRA impact criteria.

Vibration Mitigation

The following maintenance procedures are used by the rail industry to mitigate vibration impacts through minimizing vibration sources:

- Regularly scheduled rail grinding

- Wheel truing programs
- Vehicle reconditioning programs
- Use of wheel-flat detectors

3.1.4 Visual Resources

3.1.4.1 Existing Conditions

Guidance

Visual and aesthetic quality along the project corridor was assessed in accordance with the FHWA guidance titled *Visual Impact Assessment for Highway Projects* (USDOT 1983). Under the FHWA guidance, the visual environment is categorized into the following three geographic levels:

- a. Regional Landscapes – Regional landscapes are discussed in terms of landform, topography and/or land cover components, which include water, vegetation and manmade development.
- b. Landscape Units – Landscape units are within the regional landscape and are essentially “outdoor rooms” that often correspond to places or districts that are named (i.e. downtown). Landscape units are usually enclosed by clear landform or land cover boundaries.
- c. Visual Survey Locations – Visual survey locations are locations of specific interest to persons within the larger regional landscape and landscape unit. Attributes of visual survey locations are described in terms of visual character, visual quality and visually sensitive resources.
 - Visual character is defined by the landform, water, vegetation, and manmade development attributes found within the visual survey location.
 - Visual quality is discussed in terms of vividness, intactness, and unity. An individual high rating of any one of these attributes does not connote high visual quality. Rather, all three must be highly rated to indicate high quality:
 - Vividness is defined as the memorability of the visual impression received from contrasting landscape elements as they combine to form a striking and distinctive visual pattern.
 - Intactness is defined as the integrity of visual order in the natural and man-built landscape, and the extent to which the landscape is free from visual encroachment.
 - Unity is defined as the degree to which the visual resources of the landscape join to form a coherent, harmonious visual pattern. Unity refers to the compositional harmony or compatibility between landscape elements.

3.0 Environmental Resources, Impacts and Mitigation

- Visually sensitive resources are those that are noted because of their potential to be important for scenic, historic or recreational reasons.

Assumptions

The proposed improvements would occur primarily within UPRR's ROW and:

- The rail service on existing rail lines was not assessed because it includes no increase in the number of Amtrak trains; the project would shift trains to a new second track; and the duration or frequency of the added trips would not be notable to visual receptors along the corridor.
- The speed Amtrak trains would increase from 79 mph to 110 mph in the project corridor. However, freight train speeds on this section of line would not increase due to this work and continue to operate at 60 mph. The increase in Amtrak train speed would not be notable to visual receptors along the corridor.
- No new stations, facilities or other structures are discussed in terms of: changes to the design or size of existing structures; changes in site lighting or vegetation; and increase in use that may result in impacts to local visual receptors.
- Within the 2nd mainline track project corridor, there is one large culvert at MP 38.8 and bridges at MP 42.6 and 44.4 where the rail line crosses waterways. These would be modified with the addition of a second track.
- Within the Mazonia siding track corridor, there is one culvert at MP 55.5 where the rail line crosses a waterway. This would be modified with the addition of a siding track west of the existing mainline.

Application of FHWA Guidance

The FHWA geographic levels of regional landscape and landscape unit are generally used for projects that are contiguous in nature. Because the project includes three structures distributed over the corridor, and the locations are disjunctive in nature, these geographic levels were not used. Instead, each culvert/bridge site was assessed alone in terms of visual quality and potential for impact as the result of project construction and operation. The structures are not eligible for inclusion in the National Register of Historic Places under Criterion C (see State Historic Preservation Office [SHPO] letter dated April 28th, 2010 in Appendix B).

A conceptual drawing of the proposed replacement structures has been prepared by the UPRR and is included in Appendix E.

3.1.4.2 Potential Impacts

110 mph Project Corridor between MP 36.7 and 72.8

Track and signal improvements for 110 mph service would occur within the existing UPRR ROW. Temporary easements would need to be obtained by UPRR for construction access

and to stage materials; however, these easements will not require the relocation of residences, or permanently impact visual receptors. Construction noise will be temporary and confined to the hours between 7 a.m. and 6 p.m.

2nd Mainline Tract Project between MP 36.7 and MP 44.69

Structure at MP 38.8

This site includes an operating single track crossing the Jackson Creek located at the margin of the Joliet urban residential area between industrial uses to the west and an inactive quarry to the east. There are no residences or existing buildings near the site. As result, there are no clear views of the structure. The structure to be widened, at MP 38.8, is an extension of an existing arch top culvert to accommodate the proposed additional track. Because of the lack of residential receptors at this site, and because the project proposes to extend the existing culvert and there is no temporary or infrequent visual change to residential viewers, no visual impacts would occur.

Structure at MP 42.6

The second structure to be widened, at MP 42.6, has a span of 11 feet over the Cedar Run Creek. The current structure is nearly 90 years old and is located in an agricultural area. The current structure is not considered an historic bridge by State Historic Preservation Officer (SHPO).

The nearest residences are located approximately 1800 feet to the northeast and north of Millsdale Road. To avoid construction or longer-term impacts on this waterway, the railroad has indicated that they are considering the installation of two 20-foot spans. The structure extension would be a concrete box culvert similar in design to the existing structure. Because visual resource impacts to these receptors are not anticipated, no visual impacts would occur.

Structure at MP 44.4

The third structure to be replaced, at MP 44.4, consists of two spans – one with a 42-foot length, the other being 56 feet long, for an overall length of 98 feet. The current structure is 104 years old and is not considered an historic bridge by the SHPO.

A single-family subdivision is located southeast (Meadowbrick) and northeast (Wooded Cove Estates) of the Jackson Creek Crossing at MP 44.4. One residence lies east and three residences west of the railroad ROW. These single-family houses are located on the north bank of Jackson Creek approximately 400 to 500 feet from the bridge. However, the train tracks and bridge are located beyond the view of these residential receptors due to trees or distance.

The proposed new bridge would be a pre-cast concrete structure with a center pier. Visual impacts are not anticipated because the project proposes only to replace the existing bridge with a similar structure.

3.0 Environmental Resources, Impacts and Mitigation

Mazonia Siding Track between MP 55.0 and MP 57.13

The nearest residences are located in the City of Braidwood along North Washington Street approximately 200 feet to the west of the UPRR ROW. These multi-family houses have views of the existing mainline track. The siding track allows a location to store trains off the mainline track during periods of incidents while other train traffic can pass by. The siding track will also act as a passing lane that will allow for a freight train (slower train traffic) to pull over onto the siding while Amtrak traffic can move through the area quickly using the existing mainline track. The proposed siding track will not increase the number of trains or the regulated speed of trains throughout this area; thus, visual receptor impacts will not be increased from the existing condition.

Temporary easements would need to be obtained by UPRR for construction access and to stage materials; however, these easements will not require the relocation of residences, or permanently impact visual receptors. Construction noise will be temporary and confined to the hours between 7 a.m. and 6 p.m.

3.1.4.3 Mitigation

Impacts to visual resources would be negligible. As a result, mitigation is not required.

3.1.5 Agriculture

3.1.5.1 Existing Conditions

Outside the urbanized area of Joliet, agriculture is the primary land use in the project corridor. Along the project corridor, the main agricultural crops are row crops, primarily corn and soybeans. However, many agricultural parcels are proposed for future development along the 2nd mainline track due to the opening of the UPRR CenterPointe Joliet Intermodal Center. No agricultural lands are located along the Mazonia siding project corridor.

3.1.5.2 Potential Impacts

Proposed improvements are planned to occur primarily within or adjacent to existing railroad right-of-way. As a result, no impacts to agricultural areas are anticipated along the project corridor between MP 36.7 to 72.8.

As discussed in more detail in Section 3.2, numerous soil types located within the project corridor are identified as farmland of statewide importance; however, none of these would be affected by the project, since the project would occur primarily in existing railroad ROW and the soils in these areas are already disturbed.

3.1.5.3 Mitigation

No impacts to agriculture are anticipated. As a result, mitigation is not required.

3.1.6 Tree Resources

3.1.6.1 Existing Conditions

A screening evaluation of forest and tree resources was conducted for the Joliet to Dwight project corridor. As the proposed improvements are located primarily within the existing railroad ROW, with the exception of the three new bridge crossings, there are limited trees that would potentially be impacted. The forested areas are generally located within creek crossings or existing wetlands and are dominated by common floodplain species. The general condition of the forested areas located within the project corridor was determined during multiple field visits in 2010 in the areas of Jackson Creek, Sugar Run, Cedar Creek, and the Mazonia siding. In addition, a screening for the entire project area was completed during a high-rail field review on March 24th, 2011.

The majority of the project area contains scattered trees associated with fence-rows or developed areas. Small stands of high quality trees such as oaks are generally located in residential yards. Larger stands of trees are primarily associated with wetlands and streams. These areas are dominated by Eastern cottonwood (*Populus deltoides*), American elm (*Ulmus americana*), silver maple (*Acer saccharinum*), box elder (*Acer negundo*), and green ash (*Fraxinus pennsylvanica subintegerrima*).

2nd Mainline Tract Project between MP 36.7 and MP 44.69

Sugar Run Creek MP 38.8

The trees at milepost MP 38.8 near Sugar Run are primarily second growth, adventive species that includes box elder (*Acer negundo*), eastern cottonwood (*Populus deltoides*), green ash (*Fraxinus pennsylvanica subintegerrima*), and white mulberry (*Morus alba*). The understory consists of aggressive non-native shrub species of buckthorn (*Rhamnus cathartica*) and honeysuckle (*Lonicera tatarica*). A portion of this area contains abandoned equipment/building foundations from an abandoned railyard.

Cedar Creek MP 42.6

Only a few scattered trees occur along the banks of Cedar Creek at MP 42.6. A few small white mulberry trees and small box elders are present, all less than 6 inches in diameter at breast height (DBH). One dead eastern cottonwood is also present.

Jackson Creek MP 44.4

The forested area associated with Jackson Creek includes the only high-quality native forest within the project limits. The area on the northwest side of Jackson Creek/UPRR ROW (MP 44.4) is comprised of a mature oak-hickory forest, dominated by the following species: red oak (*Quercus rubra*), white oak (*Quercus alba*), and shagbark hickory (*Carya ovata*). Additional tree species present include black cherry (*Prunus serotina*), black walnut (*Juglans nigra*), American elm, silver maple, and hackberry (*Celtis occidentalis*).

The northeast portion of MP 44.4 is mainly a manicured landscaped residential area, with ash, silver maple, black cherry, American elm, and basswood (*Tilia americana*) species.

3.0 Environmental Resources, Impacts and Mitigation

The southeast side of MP 44.4 is dominated by a few large Eastern cottonwoods, white mulberry, Siberian elm (*Ulmus pumila*), and black cherry. The understory is comprised of thick honeysuckle. The southwest side is comprised of box elder, white mulberry, hackberry, silver maple, and black walnut. There are patches of thick honeysuckle within this area as well. Off-road vehicle trails are scattered throughout the forest.

Mazonia Siding Track between MP 55.0 and MP 57.13

The southern portion of this segment contains very few trees in comparison to the northern portion. Woodland areas exist on the northwest side of UPRR ROW between MP 56 (Hole in the Wall Road) and MP 55.6 (Coal City Road). This woodland is dominated by black walnut, green ash, silver maple, box elder, American elm, and eastern cottonwood. Additional tree species present include white mulberry, tree of Heaven (*Ailanthus altissima*), black locust (*Robinia pseudoacacia*), American sycamore (*Platanus occidentalis*), Siberian elm (*Ulmus pumila*), and honey locust (*Gleditsia triacanthos*). The understory consists of mostly aggressive non-native shrub species of buckthorn and honeysuckle.

3.1.6.2 Potential Impacts

Proposed improvements are planned to occur primarily within or adjacent to existing railroad right-of-way. As a result, tree impacts as a result of the proposed project are anticipated to be minimal.

3.1.6.3 Mitigation

Tree impacts can be mitigated by replacing trees that are unavoidable and minimizing impacts to the mature forested areas.

3.2 Ecological Systems

This section describes the ecological systems to be served or affected by the proposed project. Included in this section is a discussion of the anticipated wetlands, water quality and resources, and threatened and endangered species and special lands effects of the Preferred Alternative. Where appropriate, mitigation measures are identified.

3.2.1 Wetlands and Waters of the US

Wetlands are defined by the USACE and the USEPA as:

"Those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (Title 33 *Code of Federal Regulations* Section 328.3 (b) and Section 404 of the Clean Water Act).

Executive Order 11990, "Protection of Wetlands", requires federal agencies to avoid, to the extent practicable, short and long-term impacts associated with the destruction or modification of wetlands. More specifically, it directs federal agencies to avoid new

construction in wetlands unless there is no practical alternative. In addition, it states that where wetlands cannot be avoided, the proposed action must include all practical measures to minimize harm to the wetlands.

Section 10 of the Rivers and Harbors Act of 1899 (Title 33 United States Code [USC] Section 403) and Section 404 of the Clean Water Act (Title 33 USC Section 1344) authorize permits for placement of structures, dredged, or fill material into the "waters of the U.S." All public and private projects must obtain permits. The most likely types of these permits in the study area would be for filling wetlands of streams. Impacts to wetlands and waters of the United States must be replaced. While mitigation requirements under Section 404 and Section 10 are the same for developers and the IDOT regarding wetland loss and replacement, under the Illinois Wetland Protection Act of 1989 (Chapter 415 Illinois Compiled Statutes Section 5), IDOT mitigates for isolated and jurisdictional wetlands.

3.2.1.1 Existing Conditions

Wetlands in the overall project area were identified using the U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) mapping combined with aerial photography review and field confirmation via a high-rail review on March 24, 2011. The high-rail review generally consisted evaluating current conditions and did not include delineating any wetlands. All wetlands are located within the Des Plaines River or Illinois River watersheds.

Field conditions at three locations (Jackson Creek bridge, Cedar Creek bridge, and Sugar Run bridge) were delineated in the field during field investigations in 2010. The wetland delineations associated with these locations are contained herein as these are locations with a high potential for right-of-way acquisition and/or work within waters of the U.S. (WOUS) for double track. The limits of these wetlands were determined based on the presence of hydrophytic (adapted to grow in saturated soil) vegetation, hydric (characterized by considerable moisture) soils, and wetland hydrology. These three criteria are used to assess sites as wetlands or non-wetlands. Improvements within the remaining areas of the corridor and not anticipated to include work outside the right-of-way or in areas not already disturbed were evaluated through screening only.

Overall Project Corridor Wetland Screening – Dwight to Joliet

Table 3-9 includes a summary of potential wetlands identified via NWI map review, high-rail screening, and wetland delineations in the Jackson Creek, Cedar Creek, and Sugar Run areas. Locations identified in the field during the high-rail screening but not on the NWI maps have been approximated.

Most of the wetlands in the project corridor are located near or along stream or ditched channels. Major portions of the project area are developed (within the City of Joliet). Agricultural fields are prevalent south of Joliet. There are limited opportunities for isolated

^{2/} Based on 100 foot wide corridor, 50 feet on either side of existing track.

wetlands to develop in these actively used areas. Historically, many agricultural fields in northern Illinois were ditched or tilled, which eliminated wetlands in these areas.

3.2.1.2 Wetland Plant Communities

Four types of wetland plant communities were identified in the project corridor. These include open water, emergent, shrub, and forested. Open water habitats include WOUS. Emergent wetlands were generally herbaceous dominated wetlands in depressional areas or along the banks of the creek. The shrub and forested wetlands are primarily along the banks of creeks. Forested wetlands are dominated by trees and include depressional and riparian areas.

None of the wetlands found along the UPRR tracks are considered to be High Quality Aquatic Resources. Will County has not adopted the USEPA Advanced Identification (ADID) program, which inventories high quality areas. Therefore, no ADID wetlands are located within the project limits.

3.2.1.3 Farmed Wetlands

Farmed wetlands were first defined as a result of the "Swampbuster" provision of the Food Security Act of 1985 (Title 16 *United States Code* Sections 3801-3862). This act regulates the activities of farmers in regards to wetlands. The U.S. Department of Agriculture (USDA) can withhold farm program benefits if a farmer drains, dredges, or manipulates wetlands to increase the potential tillable land. Wetlands altered or manipulated before 1985 are termed "Prior Converted Wetlands" and are exempt from the Swampbuster provision. The Natural Resources Conservation Service (NRCS) has authority over farmed wetlands and the determination of these areas. Since 2005, the NRCS no longer conducts farmed wetland determinations for land that will be converted from agriculture to other uses. In response, the Chicago District of the USACE has issued guidance for the determination of farmed wetlands in their jurisdiction.

There were no areas within the project limits that met the criteria for farmed wetlands. Project limits were determined to be the railroad ROW except for the Jackson Creek, Cedar Creek, and Sugar Run locations.

3.2.1.4 Wetland Functions

Each of the wetland types delineated serve different functions within the landscape. Riparian zones along major creeks and rivers within the project corridor provide the majority of natural cover and habitat in this landscape, which is highly fragmented by agriculture, roads, and development. Animals make use of forested areas (both wetland and non-wetland) as both nesting and foraging habitat. These areas also provide a corridor for use in migration, as well as for local travel.

Farmed wetlands provide little or no habitat functions for plants and animals. These areas may be tilled in drier years and the vegetation communities are completely disturbed, providing little to no habitat. These farmed depressions do serve as storm water storage and toxicant traps and also may act as groundwater recharge areas dependent upon the permeability of the soils.

Project corridor wetlands serve as storm water attenuation features and can serve as sediment/toxicant traps in addition to habitat for wildlife. Furthermore, these areas can serve as groundwater recharge areas. Wetlands adjacent to streams also serve to attenuate flood flows from the channel during high water periods.

Jackson Creek, Cedar Creek, and Sugar Run Wetland Delineations

As of 2008, a series of regional supplements to the 1987 Wetlands Delineation Manual were published which outline updated technical guidelines and procedures for identifying and delineating wetlands that may be subject to regulatory jurisdiction under Section 404 of the Clean Water Act or Section 10 of the Rivers and Harbors Act. This wetland delineation was conducted using methodology presented in the USACE Regional Supplement to the USACE

Wetlands Delineation Manual: Midwest Region (USACE Midwest Region Manual) (USACE, 2008).

Seven jurisdictional wetlands and two "WOUS" were identified in April 2010 within the creek areas. In addition, two wetlands were identified that appear to be isolated. The area of wetland in the vicinity these three areas is approximately 1.28 acres and the area of open water is approximately 0.84 acre. Most of the wetlands are near or along streams. Wet meadows, open water, and forested wetlands comprise the majority of wetlands in number and in total area.

The exhibits in Appendix D depict the wetland areas. Table 3-10 presents the site number, plant community type, NWI classification, dominant vegetation, soil type, hydrologic indicator, size, Floristic Quality Index (FQI), and stream association. Wetlands are assigned a site number during the field delineations and are characterized by plant community and NWI classification. The total size of the wetland is approximated based on available mapping and field surveys. All wetlands within this section are in the Des Plaines River Watershed.

The overall quality of the wetland plant community is indicated by the FQI number calculated for each wetland. The FQI is an index derived from floristic inventory data and calculated from the number of species that occur in the plant community and the species coefficient of conservatism (C). C values are assigned to individual plant species, range from 0 to 10, and represent an estimated probability that a plant is likely to occur in a landscape relatively unaltered from what is believed to be a pre-settlement condition. The aggregate conservatism of all the plants inhabiting a site is used to determine its FQI.

Another indicator, the Wetness Index, is a mean value derived from all wetness values in a floristic inventory. Based solely on the composition of plant species within the community being evaluated, the index characterizes the plant community in terms of hydrological characteristics. Values of -5 to 0 are considered wetlands and values from 0 to +5 are considered non-wetland. Finally, hydrologic connections to adjacent streams also are identified to aid in the jurisdictional determinations.

In Illinois, the FQI is applied to the vegetation of each wetland site. The general interpretation of the FQI value is that sites with values of 20 or more have at least some evidence of native character and may be considered environmental assets. Sites with FQI values between 10 and 20 are considered fair quality, FQI values of less than 10 indicate low natural quality; and FQI values of 5 or less indicate very low quality.

Wetland Site 4 was considered to be fair quality, with an FQI value of 10.5. The remaining wetlands were considered degraded or severely degraded.

3.0 Environmental Resources, Impacts and Mitigation

Table 3-10. Wetlands and their Characteristics in the Delineated Areas Jackson Creek, Cedar Creek, Sugar Run Areas

Site	Wetland Type ¹	Wetland Area Acres ²	Dominant Vegetation (all strata)	Native FQI	Native Mean C	Mapped Soil Type	Isolated? Y/N ³	NWI Classification	Wetness Coefficient ⁴
1	Open water Sugar Run (WOUS)	0.11	Tatarian honeysuckle Fowl manna grass Sedges Poison ivy	N/A	N/A	Romeo silt loam (316A) Pits quarry (864)	N	R2UBH	N/A
2	Open water Wet meadow Cedar Creek (WOUS)	0.09	Cockspur hawthorn Elderberry Sandbar willow Reed canary grass Narrow-leaved cattail	7.3	1.8	Elpaso silt loam (356A)	N	None	-2.1
3	Open water Forested Jackson Creek (WOUS)	0.65	Box elder Silver maple Elderberry Reed canary grass Fowl manna grass	8.7	2.6	Lawson silt loam (8451A)	N	PFO1A	-0.9
4	Wet meadow Tributary to Sugar Run (WOUS)	0.54	Gray dogwood Elderberry Common buckthorn Common reed Reed canary grass Riverbank grape	10.5	2.3	St. Clair silty clay loam (560D2)	N	PUBGx	-1.7
5	Forested	0.00	Green ash Box elder Common buckthorn Red hawthorn Wild geranium Common reed Riverbank grape	9.5	3.0	St. Clair silty clay loam (560D2)	Y	None	0.1
6	Open water Wet meadow – Tributary to Cedar Creek (WOUS)	0.29	Eastern cottonwood Reed canary grass Narrow-leaved cattails White mulberry	4.5	2.0	Elpaso silt loam (356A) & Peotone silty clay loam (330A)	N	None	-3.6
7	Wet meadow Forested Tributary to Cedar Creek (WOUS)	0.09	Green ash Reed canary grass Box elder Curly dock	5.1	1.5	Elpaso silt loam (356A)	N	None	-2.0

Site	Wetland Type ¹	Wetland Area Acres ²	Dominant Vegetation (all strata)	Native FQI	Native Mean C	Mapped Soil Type	Isolated? Y/N ³	NWI Classification	Wetness Coefficient ⁴
8	Wet meadow Shrub	0.08	Sandbar willow Box elder Black willow Reed canary grass	8.0	2.7	Beecher silt loam (298B)	N	None	-3.0
9	Forested	0.05	Box elder Moneywort Reed canary grass Hackberry	4.0	1.3	Camden silt loam (134)	Y	None	-1.2
10	Open water Wet meadow Tributary to Jackson Creek (WOUS)	0.03	Long-bracted tussock sedge Reed canary grass Fowl manna grass Orange jewelweed	9.0	3.0	Ashkum silty clay loam (232A)	N	None	-1.6
11	Open water Hickory Creek (WOUS)	0.19	Eastern cottonwood	N/A	N/A	Lawson silt loam (8451A)	N	R2UBHx	N/A

¹ Wetland type is based on the IDOT definition off the Wetland Impact Evaluation form.

² Acreage is within project area only. All wetlands extend off-site.

³ Isolated is based on professional judgment in the field. The USACE makes all final jurisdictional determinations. Isolated applies to the lack of hydrological connection to a "Waters of the U.S."

⁴ R – riverine, P – palustrine, FO – forested, UB – unconsolidated bottom, A – temporarily flooded, F – semi-permanently flooded, G – intermittently exposed, H – permanently flooded, 1 – broad-leaved deciduous, 4 – floating vascular, x – excavated

⁵ Wetness Index – The index is a mean derived from all wetness values in a floristic inventory. Based solely on the composition of plant species within the community being evaluated the index characterizes the plant community in terms of hydrological characteristics; values of -5 to 0 are considered wetlands and values from 0 to +5 are non-wetland.

3.0 Environmental Resources, Impacts and Mitigation

3.2.1.5 Wetlands Affected

The assessment of potential wetland impacts is based upon direct impacts related to the bridge and track construction, which includes areas within the proposed right-of-way and environmental survey limits. Construction would include placement of fill for new bridge abutments or piers and embankment for new track adjacent to the existing tracks. Wetland impacts related to construction would include vegetation removal, placement of clean fill, and changes to the wetland hydrologic regime. Besides the loss of wetland acreage, some wetland functions and values could be affected by the proposed project.

Wetland impacts for the entire project corridor will need to be assessed after wetland delineations can be completed and engineering plans have been developed. Table 3-11 shows anticipated wetland impacts from the proposed improvements near Jackson Creek, Cedar Creek and Sugar Run. Impacts are assumed to occur only in areas where known additional ROW may be necessary (Jackson Creek, Cedar Creek, and Sugar Run bridges). Under the implementing regulations of the Illinois Interagency Wetland Policy Act of 1989 (IWPA), impacts to wetlands having an FQI rating of 20 or greater require 5.5 to 1.0 mitigation ratios. No high quality wetland areas will be directly affected by the proposed project.

Table 3-11. Wetlands Affected and their Characteristics

Site No.	Plant Community	Size acres ¹	Impacted Wetlands, acres	Impacted Open Water, acres	FQI	Stream/ Major Watershed
1	Open water	0.11	0	0.11	N/A	Sugar Run/ Des Plaines
2	Wet meadow	0.09	0.09	0	7.3	Cedar Creek/ Des Plaines
3	Open water Forested	0.65	0.11	0.54	8.7	Jackson Creek/ Des Plaines
4	Wet meadow	0.54	0.54	0	10.5	Tributary to Sugar Run/ Des Plaines
5	Forested	0.00	0	0	9.5	None/ Des Plaines
6	Open water Wet meadow	0.29	0.29	0	4.5	Tributary to Cedar Creek / Des Plaines
7	Wet meadow Forested	0.09	0.09	0	5.1	Tributary to Cedar Creek / Des Plaines
8	Wet meadow Shrub	0.08	0.08	0	8.0	Tributary to Jackson Creek / Des Plaines
9	Open water Wet meadow	0.05	0.05	0	4.0	None / Des Plaines
10	Open water Wet meadow	0.03	0.03	0	9.0	Tributary to Jackson Creek / Des Plaines
11	Open water	0.19	0	0	N/A	Hickory Creek /Des Plaines
Total Impacts			1.28	0.65		

¹ Acreage within project corridor, t – total wetland acreage, * – large wetland continues beyond the project corridor

Avoidance and Measures to Minimize Harm

Recognizing the conceptual engineering detail of the project, further efforts will be made in future phases of work to avoid and minimize additional wetland impacts beyond the efforts. Avoidance and minimization can be accomplished in the following ways:

- Narrower railroad cross-section with the use of:
 - Retaining walls
 - Steeper embankments
 - Bridging critical wetland resources

Avoiding and minimizing impacts to wetland resources may be constrained by other critical resources or local issues.

Wetland Mitigation

Objectives for mitigation will be established in consultation with regulatory and resource agencies on the following major issues:

- Purchase of mitigation credits from a commercial wetland bank
- Type of compensatory wetland mitigation
- In-kind replacement
- Functional replacement
- Ratio of wetland mitigation replacement
- Location of wetland mitigation replacement

The State of Illinois, in the IWPA, has established compensatory wetland mitigation ratios for all state-funded projects. The established ratios generally are more stringent than those established by the USACE. The highest mitigation ratio of 5.5:1 will apply for wetland impacts in the following cases:

- Alteration of wetlands that contain state- or federal-listed threatened or endangered species
- Wetlands that contain essential habitat for state- or federal-listed species
- Presence of an Illinois Natural Areas Inventory (INAI) site
- A mean C-value of 4.0 or more (Swink and Wilhelm, 1994)
- Individual wetlands with a FQI of 20 or more (Swink and Wilhelm, 1994)

The compensation ratios shown in Table 3-12 represent the current compensation guidelines required for wetland impacts in Illinois by the IWPA. The USACE has identified certain wetland resources (e.g., critical wetlands in DuPage County; High Quality Aquatic Resources, etc.) requiring elevated compensatory wetland mitigation as well. Compensation ratios for impacts to High Quality Aquatic Resources will be developed with the regulatory agencies on a case-by-case basis during permitting.

3.0 Environmental Resources, Impacts and Mitigation

Table 3-12. Illinois Department of Natural Resources (IDNR) Wetland Compensation Ratios

Degree of Adverse Impact	Onsite	Offsite	Out-of-Basin	Impact ^c Acreage	Required ^d Mitigation
Minimal alteration	1.0:1 ^a / 1.5:1 ^b	1.5:1	2.0:1	1.28 acres	1.92 acres
Significant alteration	1.5:1	2.0:1	3.0:1	N/A	N/A
Destruction	2.5:1	4.0:1	5.5:1	N/A	N/A

^a This ratio applies to all other types of wetland vegetation, substrate, or wetland type except those wetlands that have woody vegetation, subject to USACE approval.

^b This ratio applies if the vegetation of the affected wetland is woody.

^c Wetland acreage only is included in the impact acreage. Open water areas have been omitted.

^d Required mitigation assumes minimal alteration with off-site mitigation (1.5:1).

Location of the compensatory wetland mitigation sites would be determined following agreement on the wetland replacement ratio and other mitigation objectives. Appropriate environmental studies would be conducted for the selected mitigation sites, including an evaluation of the environmental features of the site, existing resources, suitability for wetland resource creation and restoration and potential effects of mitigation creation at the selected location. The environmental studies would include historic/archaeological surveys, biological surveys, and potential for threatened and endangered species.

Preferences for mitigation are as follows:

1. Wetland mitigation banking within a USACE approved bank.¹
2. On-site—within the same hydrologic unit and less than one mile from the project site.²
3. Off-site, within basin—the same hydrologic unit but more than one mile from the project site.
4. Off-site, out of basin—compensation not provided within the watershed of affected wetlands.

Mitigation for wetland impacts will coordinate with the IDNR. State mitigation ratios are determined by the size of the impact (over or under 0.5 acres) and the location of the mitigation site (on-site, off-site, out-of-basin). As the project will most likely meet the guidance of a Programmatic Action, the project will not require a wetland compensation plan or coordination with the IDNR. It is anticipated that impacts for this project will be mitigated by the purchase of credits from wetland banks.

¹ The option most preferred is mitigation bank credits. See the *Compensatory Mitigation for Losses of Aquatic Resources; Final Rule* (April 10, 2008).

² Mitigation site selection will consider the potential to attract waterfowl and other bird species that might pose a threat to aircraft. FAA Advisory Circular, *Hazardous Wildlife Attractants On or Near Airports*, (Advisory Circular No: 150/5200-33B) recommends that wetland mitigation projects that may attract hazardous wildlife be sited at least 10,000 feet from the air operations area of an airport serving turbine-powered aircraft, 5,000 feet from the air operations of an airport serving piston-powered aircraft, and five statute miles if the attractant may cause hazardous wildlife movement into or across the approach or departure airspace.

The wetland sites occur within the Chicago and Rock Island Districts of the USACE. There are eight existing commercial wetland banks located in the Des Plaines River watershed. These are Redwing Slough, Bank 2, Neal Marsh, Delany Road, Lily Cache, Mink Creek, Des Plaines Towpath, and Cedar Creek. Because of the demand for wetland bank credits in the Chicago area the availability of wetland bank credits varies over short time periods as credits are purchased and new acreage is certified. It is the responsibility of the Union Pacific Railroad to secure all natural resources permits prior to construction. This includes, but is not limited to the Section 404 permit from the USACE, Section 401 Water Quality Certification from the IEPA, or other permits that may be required. Prior to construction and as part of the wetland permitting process, the Union Pacific Railroad will secure the necessary wetland mitigation as required for the Section 404 Permit. As wetland banking is the most efficient manner to provide wetland mitigation, the UP will provide the name of the wetland bank utilized as well as proof of purchase of the required credits.

The use of wetland banks consolidates wetland impacts to larger parcels that have higher functional and ecological value than smaller wetland mitigation areas. Large wetland complexes are also more manageable than numerous, smaller, isolated wetland mitigation areas.

3.2.2 Water Quality and Water Resources

This section provides an overview of surface and groundwater resources and the water quality of those resources along the project corridor. It focuses on those resources with the potential to be affected by the Preferred Alternative.

The project would not impact groundwater and would not be likely to adversely affect surface waters. Appropriate Best Management Practices will be utilized prior to, during, and after construction as part of the Soil Erosion and Sediment Control Plan for the project.

3.2.2.1 Surface Water Resources

Surface Water Characterization

IEPA Use Assessments

The IEPA collects water samples from Ambient Water Quality Monitoring Network (AWQMN) sampling stations as part of an ongoing assessment of water quality. Comparison of collected water quality data to the Illinois water quality standards is used to identify potential water quality concerns. Illinois water quality standards include acceptable limits for general use, public and food processing water supply, and secondary contact and indigenous aquatic life. Based on the comparison, the IEPA annually assesses the use support for aquatic life, fish consumption, public and food processing water supplies, primary contact, secondary contact, and aesthetic quality. The use support classifications are as follows:

- **Full Support** – Water quality meets the needs of all designated uses protected by the applicable water quality standards.

3.0 Environmental Resources, Impacts and Mitigation

- **Non-support** – Water quality is severely impaired and not capable of supporting the designated use to any degree.

To facilitate reporting these results, IEPA also refers to fully supporting status (for a use) as a *Good* resource quality; non-supporting status is called *Fair* or *Poor* resource quality, depending on the degree to which the use is not attained. Uses determined to be non-supporting are called impaired, and waters that have at least one use assessed as non-supporting are also called impaired. For each impaired use in each assessment unit, the Illinois EPA attempts to identify potential causes and sources of the impairment.

Aquatic life use assessments in streams are typically based on the interpretation of biological information, physicochemical water data and physical-habitat information from the Intensive Basin Survey, AWQMN or Facility-Related Stream Survey programs. The primary biological measures used to determine stream health are the fish Index of Biotic Integrity (IBI), the new macroinvertebrate Index of Biotic Integrity, (mIBI) and the Macroinvertebrate Biotic Index (MBI) (Illinois Environmental Protection Agency, 2010).

IEPA 303d Listed Streams

Section 303d of the Clean Water Act requires states to develop and submit a list of impaired waters to the USEPA for review and approval. This is known as the 303d list. A stream is included on the 303d list if it does not meet applicable water quality standards or fully support its designated use or uses.

Biological Stream Characterization

Biological data can be used to evaluate the overall health of a stream, as biota respond to the physical and chemical characteristics of the system they inhabit. The IDNR developed a rating system to measure the biological diversity and integrity of streams. Two separate ratings characterize each stream using fish, mussel, macroinvertebrate and endangered species data. The IDNR rating system ranges from A (highest) to E (lowest).

Class I Streams

The IDOT and IDNR identify important water resources as Class I streams (IDOT and IDNR 1996). The Class I stream list is comprised of streams that meet any one of the following criteria:

- National Park Service Candidate Wild and Scenic Rivers
- Illinois Natural Areas Inventory (as Aquatic Natural Areas)
- Habitat for listed state or federal species
- IEPA Non-degradation Streams
- High Biological Stream Characterization (BSC) Rating

National Rivers Inventory

National Wild and Scenic River is a designation for protected water resources in the U.S. The goal of this designation is to preserve the river in its free-flowing condition. The Nationwide Rivers Inventory (NRI) is a listing of more than 3,400 free-flowing river segments in the United States that are believed to possess one or more "outstandingly remarkable" natural or cultural values judged to be of more than local or regional significance. Rivers included on this list have the potential to be characterized as National Wild and Scenic Rivers. Under a 1979 Presidential directive and related Council on Environmental Quality procedures, all federal agencies must seek to avoid or mitigate actions that would adversely affect one or more NRI segments (<http://www.nps.gov/ncrc/programs/rtca/nri/>; accessed 09/11/09).

Navigable Waterways

Navigable waterways are generally all waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce. Section 19 or Section 10/404 permits are required for construction activities in these waters. A list of navigable waterways is provided by the USACE. The project corridor is covered by the Chicago District in Will County and by the Rock Island District in Grundy County.

Project Corridor Surface Water

The project is located within three watersheds within Will and Grundy Counties, crossing or adjacent to 12 streams and one lake that are tributaries of the Illinois River, Kankakee River, or Des Plaines River. Table 3-13 summarizes the water resource information and data for each stream. The streams (Figure 3-2) are listed in order of crossings, beginning at the north end with the crossing of Hickory Creek in Joliet, Illinois.

Hickory Creek

The UPRR corridor crosses the Hickory Creek 500 feet south of I-80. Hickory Creek originates in agricultural land in southwest Cook County and has a drainage area of 109 square miles with a total length of 25.3 miles. The creek has a sandy bottom in its eastern segments, with sections of silty bottoms; the creek becomes progressively rockier as it nears Joliet, Illinois.

Hickory Creek, stream segment GG-22, is not supporting for aquatic life and primary contact due to alteration in stream-side littoral vegetative covers, chloride, other flow regime alterations, total suspended solids (TSS), phosphorus (Total), aquatic algae, and fecal coliform. The sources of impairment are listed as discharges, urban runoff/storm sewers, and impacts for hydrostructure flow regulation/modification, site clearance (land development or redevelopment). Hickory Creek has a long history as a diverse aquatic community in pre-urbanization times (Shelford 1978). The IDNR has assessed Hickory Creek as B for diversity and C for integrity. Hickory Creek is a Class I stream in Will County, but is not a potential Wild and Scenic River and is not a navigable waterway.

Figure 3-2. Project Corridor Water Resources

Sugar Run

The corridor crosses Sugar Run at MP 38.8. Sugar Run traverses east-west to the Des Plaines River and originates in agricultural land near County Highway 52 north of Spenser Road, Joliet, Illinois. Sugar Run is approximately 8.3 miles long with a total drainage area of 14.7 square miles. It merges with the Des Plaines River near the Brandon Locks south of Joliet, Illinois. The upper portion of the creek is intermittent, narrow and channelized. The lower portion of the creek retains much sinuosity and is located in an urbanized, residential setting of Preston Heights, Illinois. The lowermost section of Sugar Run, downstream of the railroad bridge, has a high gradient and a sand and gravel substrate with large areas of cobble and boulders in the steeper segments.

Sugar Run, stream segment GF-01, is not supporting for aquatic life due to arsenic, manganese, dissolved oxygen, sedimentation/siltation, and pH. The sources of impairment are listed as contaminated sediments, urban runoff/storm sewers, site clearance (land development/redevelopment), crop production (crop land or dry land). Sugar Run is not a Class I stream, a potential Wild and Scenic River, or a navigable waterway.

Cedar Creek

The corridor crosses Cedar Creek at MP 42.6, near West Millsdale Road, within the Des Plaines River Basin. Cedar Creek is a stream that originates in farmland near Illinois Route 53, two miles northeast of the Village of Elwood. Cedar Creek runs approximately 8.5 miles to its confluence with the Des Plaines River, immediately north of Treat Island, with a total drainage area of approximately 14.4 square miles. The creek is channelized in its upper sections but retains much of its sinuosity and is buffered by a timbered riparian zone west of Wilmington Road. Approximately one mile east of the Des Plaines River, the gradient becomes steeper, and the creek bottom is composed of sand gravel cobble and occasional boulders.

Cedar Creek, stream segment GD, has not been assessed by the IEPA for any uses or attainments and is not on the 303(d) list. No impairments or sources of impairment are known for Cedar Creek. No records of fish or native mussels appear in the Illinois Natural History databases. Cedar Creek is not a Class I stream, a potential Wild and Scenic River, or a navigable waterway. Three unnamed tributaries to Cedar Creek cross the corridor.

Jackson Creek

The bridge at MP 44.4 crosses Jackson Creek, near Elwood, Illinois. Jackson Creek originates in the Village of Frankfort at the eastern end of the watershed and flows westerly to the Des Plaines River through New Lenox and the Midewin National Tallgrass Prairie (MNTP). Jackson Creek is approximately 26.4 miles in length with a total drainage area of approximately 52.7 square miles. Jackson Creek merges with the Des Plaines River immediately south of Treat Island. Jackson Creek has been straightened and channelized for agricultural purposes along much of its upper length, while the last quarter of its length

is relatively un-channelized. The upper portions of the creek have bottoms that are comprised of sediment, sand and gravel. The lower portions of the creek contain substrates that are coarser, and are primarily sand, gravel, and cobble.

Four communities reside partially or fully within the watershed including New Lenox, Frankfort, Manhattan, and Elwood. Waste water treatment plants (WWTPs) in three communities discharge effluent into the Jackson Creek system. The discharge for the Village of New Lenox enters Jackson Branch, a tributary to Jackson Creek, south of Laraway Road in Country View Park; the discharge from the Village of Manhattan goes into Manhattan Branch downstream of the community; and discharge from the Village of Elwood enters Jackson Creek approximately 1,000 feet upstream of Baseline Road. In addition to the three municipal facilities, a small WWTP serving the Ranch Oaks subdivision on Jackson Creek is located on the west side of Route 52, north of the Village of Manhattan.

Jackson Creek, stream segment GC-02, has been assessed as fully supporting for aquatic life and is not on the 303(d) list. Jackson Creek has not been assessed for any other use attainment by the IEPA. A fish survey conducted by the IDNR during 2003 rated four stations on Jackson Creek as *Good*, and five stations as *Fair*, (Rung and Pescitelli 2005). One of the highest of the IBI scores for Jackson Creek was at a site in Midewin National Tallgrass Prairie. The IDNR biological diversity rating is C and the biological integrity rating is also C. Jackson Creek is not a Class I stream, a potential Wild and Scenic River, or a navigable waterway.

Grant Creek

The corridor crosses Grant Creek at approximately MP 47.2, southeast of Abraham Lincoln National Cemetery, within the Des Plaines River Basin. Grant Creek originates in farmland east of Illinois Route 53, 1.5 miles southeast of the Village of Elwood. Grant Creek flows 11.0 miles to its confluence with the Des Plaines River, at the Grant Creek Cut-off, with a total drainage area of 15.9 square miles. The creek is channelized in sections but retains much of its sinuosity and is buffered by a timbered riparian zone west Illinois Route 53.

Cedar Creek, stream segment GA-01, has been assessed by the IEPA as fully supporting for aquatic life and is not on the 303(d) list. No impairments or sources of impairment are known for Grant Creek. Grant Creek is not a Class I stream, a potential Wild and Scenic River, or a navigable waterway.

Prairie Creek

The corridor crosses Prairie Creek at approximately MP 49.5, within the MNTP, and the Kankakee River Basin. Prairie Creek originates in farmland west of Illinois Route 19, approximately 2.5 miles south of the Village of Frankfort. Prairie Creek is approximately 27.0 miles in length with a total drainage area of 49.6 square miles. Prairie Creek merges with Kankakee River approximately 3.9 miles south of the corridor crossing. The creek is

3.0 Environmental Resources, Impacts and Mitigation

channelized in sections but retains much of its sinuosity and is buffered by a timbered riparian zone within the MNTP.

Prairie Creek, stream segment FA-01, has been assessed by the IEPA as fully supporting for aquatic life and is not on the 303(d) list. No impairments or sources of impairment are known for Prairie Creek. Prairie Creek is not a Class I stream, a potential Wild and Scenic River, or a navigable waterway. One unnamed tributary to Prairie Creek crosses the corridor north of the Prairie Creek Crossing.

Forked Creek

The corridor crosses Forked Creek at approximately MP 52.4, in the City of Wilmington, within the Kankakee River Basin. Forked Creek originates in the Village of Monee east of Interstate 55 and flows for 39.4 miles to its confluence with the Kankakee River. Forked Creek is the third largest stream in the project corridor with a total drainage area of 137.0 square miles. The creek is channelized in sections but retains much of its sinuosity and is buffered by a timbered riparian zone within the western half of its reach.

Forked Creek, stream segment FB-01, has been assessed by the IEPA as fully supporting for aquatic life and is not on the 303(d) list. No impairments or sources of impairment are known for Forked Creek. The IDNR has assessed Forked Creek as A for diversity and B for Integrity. Forked Creek is not a Class I stream, a potential Wild and Scenic River, or a navigable waterway.

Kankakee River

The corridor crosses the Kankakee River at approximately MP 52.6, in the City of Wilmington. The Kankakee River originates in St. Joseph County, Indiana. The Kankakee River extends for 57.2 miles in length in Illinois to its confluence with the Illinois River, southwest of the Village of Channahon. The Kankakee River has a total drainage area of 5,165 square miles. The river is channelized in Indiana east of the Indiana-Illinois state boundary; however, it retains much of its sinuosity and is buffered by a timbered riparian zone in Illinois.

The Kankakee River, stream segment F-16, has been assessed by the IEPA as fully supporting for aquatic life, primary contact, and secondary contact, not supporting for fish consumption and public and food processing water supplies, and not assessed for aesthetic quality. No cause or source of impairment has been identified for stream segment F-16. The IDNR has assessed the Kankakee River as a Biologically Significant Stream and as A for diversity and B for integrity. The Kankakee River is a Class I stream, a Wild and Scenic River, and a navigable waterway. One unnamed tributary to the Kankakee River also crosses the corridor north of the City of Wilmington.

Hawk Lake

The corridor parallels Hawk Lake at approximately MP 56.0, in the City of Braidwood, within the Kankakee River Basin. Hawk Lake is a constructed lake within a former mining area. Hawk Lake discharges to Claypool Ditch. Claypool Ditch extends 7.9 miles to its confluence with the Mazon River, north of Illinois Route 113. The total drainage area is approximately 35.3 square miles. The ditch is channelized through the majority of its reach.

Hawk Lake has not been assessed by the IEPA and is not on the 303(d) list. No impairments or sources of impairment are known for Hawk Lake.

Jackson Creek

The corridor is adjacent to the headwaters of Jackson Creek at MP 60.0, northeast of the City of Braceville, within the Upper Illinois River Basin. Jackson Creek originates northeast of the City of Braceville, west of the corridor. Jackson Creek extends approximately 5.1 miles in length to its confluence with the Mazon River, west of the City of Braceville. The creek is channelized.

Jackson Creek has not been assessed by the IEPA and is not on the 303(d) list. Jackson Creek is not a Class I stream, potential Wild and Scenic River, or a navigable waterway.

Mazon River

The corridor crosses the Mazon River at approximately MP 62.7, southwest of the City of Braceville, within the Upper Illinois River Basin. The Mazon River originates in agricultural fields, southeast of the Village of Cabery. The Mazon River extends 27.4 miles in length to its confluence with the Illinois River, within the City of Morris. The Mazon River with a drainage area of 524 square miles, is second in size to the Kankakee River. The river is channelized in sections but retains much of its sinuosity and is buffered by a timbered riparian zone on its northern side within the corridor.

The Mazon River, stream segment DV-06, has been assessed by the IEPA as fully supporting for aquatic life and not supporting for fish consumption due to mercury and polychlorinated biphenols. The sources of impairment include atmospheric deposition – toxics and unknown sources. The IDNR has assessed the Mazon River as A for diversity and A for Integrity. The Mazon River is a Class I stream, a potential Wild and Scenic River, and is not a navigable waterway. One tributary to the Mazon River crosses the corridor south of the Village of Gardner.

Woods Run

The corridor crosses Woods Run at approximately MP 70.1, northeast of the Village of Dwight, within the Upper Illinois River Basin. Woods Run originates in agricultural fields west of the Village of Dwight and flows 9.5 miles to its merger with Gooseberry Creek. The stream is channelized through the corridor.

3.0 Environmental Resources, Impacts and Mitigation

Woods Run, stream segment DVBA, has not been assessed by the IEPA. No impairments or sources of impairment are known for Woods Run. Woods Run is not a Class I stream, a potential Wild and Scenic River, or a navigable waterway.

Gooseberry Creek

The corridor is adjacent to Gooseberry Creek at approximately MP 72.4, northeast of the Village of Dwight, within the Upper Illinois River Basin. Gooseberry Creek originates in agricultural fields southeast of the Village of Odell and flows 25.9 miles to its confluence with the Mazon River. The stream is channelized throughout the majority of its reach.

Gooseberry Creek, stream segment DVB, has not been assessed by the IEPA. No impairments or sources of impairment are known for Gooseberry Creek. Gooseberry Creek is not a Class I stream, a potential Wild and Scenic River, or a navigable waterway.

3.2.2.2 Potential Impacts

The No-Build Alternative would not impact waterways or water quality. The Preferred Alternative is not anticipated to permanently impact waterways or water quality. Some stream substrate may be permanently removed to accommodate the culvert extensions and bridge construction at Sugar Run, Cedar Creek, and Jackson Creek. Temporary impacts due to instream streambank work would cease immediately after the activity is completed. Some specific minor construction impacts cannot be estimated at this time because they depend on several factors that would be determined either during final design or by the contractor before or during construction. Construction impacts would be minimized and mitigated using Best Management Practices.

3.2.2.3 Mitigation

To comply with Section 404 of the Clean Water Act, waterways within or immediately adjacent to the project area will be identified. Impacts to waterway(s) will be assessed and necessary permits will be obtained from the USACE prior to construction. All attempts will be made to avoid waterways. If avoidance is not possible, impacts will be minimized to the greatest extent possible. In the Chicago District (that oversees the regulatory program in the six-county Chicago metropolitan area including Will County), Regional Permit 3 applies to linear transportation projects. This regional permit requires that cumulative impacts cannot exceed 1.0 acre, and no single crossing may impact more than 0.25 acre. All of the conditions and requirements of Nationwide Permit 14 and Regional Permit 3 will be followed. It is anticipated that Section 401 Water Quality Certification will not need to be obtained separately. The IEPA has conditional Section 401 Water Quality Certification applicable to Nationwide Permit 14 and Regional Permit 3.

3.2.2.2 Groundwater Resources

Groundwater quality is dependent in large part on the physical and chemical composition of overlying geologic materials. Overall groundwater quality in the project area is good. The risk for groundwater contamination through the corridor is low to moderate except

where the corridor crosses alluvial deposits. In such alluvial formations the potential for groundwater contamination is rated as high (Berg and Kempton, 1984).

Groundwater occurs in water-bearing units called aquifers. In Illinois, aquifers are classified as sand-and-gravel aquifers, shallow bedrock aquifers, and deep bedrock aquifers. Within the project areas, the principal shallow sand-and-gravel aquifers in Illinois are found in Will County. There are no sole source aquifers in Illinois. No regulated groundwater recharge areas are within the project area.

A review of data obtained from the Illinois State Geological Survey (ISGS) Wells and Borings Database shows 15 locations with 33 wells or borings within 200 feet of the Union Pacific Railroad's New 2nd Mainline Track from Joliet (MP 36.8) to Dwight (MP 72.8), IL.³ All of the locations within the corridor are classified as water wells or borings. Four water wells or borings are listed as being in the same location; another site has three and one has two listings. The remaining sites all have one well or boring identified.

The ISGS notes that this data collection includes records dating as far back as 1801, and that most locations of the wells and boring locations have not been verified. Based on the available data, further coordination is necessary with the ISGS to conduct field tests to ensure that any wells or borings (active or inactive) are accounted for and would not be impacted by the construction of the project.

3.2.2.4 Potential Impacts

The No-Build Alternative would not impact groundwater. The Preferred Alternative is not anticipated to impact groundwater.

3.2.2.5 Mitigation

As impacts to groundwater are not anticipated, mitigation is not anticipated.

3.2.3 Threatened and Endangered Species

3.2.3.1 Existing Conditions

The U.S. Endangered Species Act (ESA) of 1973, as amended, provides protection for species that are listed as threatened or endangered under the ESA. The ESA grants the USFWS prime responsibility in administering the species designations and protections granted under the ESA. "Endangered" means that a species is in danger of extinction throughout all or a significant portion of its range. "Threatened" means that a species is likely to become endangered in the foreseeable future.

³ Dated February 21, 1008, <http://www.isgs.uiuc.edu/maps-data-pub/wwdb/wwdb.shtml>) and accessed through the Illinois Natural Resources Geospatial Data Clearinghouse (<http://www.isgs.uiuc.edu/nsdihome/> on May 2, 2010

3.0 Environmental Resources, Impacts and Mitigation

Threatened and endangered species potentially occurring in the project corridor were identified from information supplied by the Illinois Department of Natural Resources (IDNR, 2011) and the USFWS Section 7 Consultation (USFWS, 2011).

Threatened and Endangered Species

Various species receive federal and state protection to help repair previous damage to populations and to attempt to return the species population to self-sustaining levels. Other species receive state protection if the limits of their distribution ranges are within the particular state of concern or if populations can only exist in a specific but uncommon habitat in these states. Agency records and databases were reviewed to determine if federal or state-listed threatened or endangered species are known to exist in the project area.

Table 3-14 summarizes the USFWS federally endangered and threatened and candidate species by county within the project limits. According to the USFWS, the Candidate Conservation Program assesses species and develops and facilitates the use of voluntary conservation tools for the conservation of candidate and other species-at-risk and their habitats, so that these species do not need the protection of the ESA. The USFWS accomplishes this by working in partnership with public and private landowners.

Table 3-14. USFWS Federally Endangered and Threatened Species List in Project Area

Species	Status	County	Habitat
Indiana bat	Endangered	Grundy & Livingston	Caves, mines (hibernacula); small stream corridors with well developed riparian woods; upland forests (foraging)
Hine's emerald dragonfly	Endangered	Will	Spring fed wetlands, wet meadows and marshes
Leafy-prairie clover	Endangered	Will	Prairie remnants on thin soil over limestone
Eastern prairie fringed orchid	Threatened	Will, Grundy, & Livingston	Moderate to high quality wetlands, sedge meadow, marsh, and mesic to wet prairie
Lakeside daisy	Threatened	Will	Dry rocky prairies
Mead's milkweed	Threatened	Will	Late successional tallgrass prairie, tallgrass prairie converted to hay meadow, and glades or barrens with thin soil
Sheepnose mussel	Candidate (Proposed as Endangered)	Will	Shallow areas in larger rivers and streams
Snuffbox mussel	Candidate (Proposed as Endangered)	Will	Small to medium-sized creeks and some larger rivers, in areas with a swift current
Eastern massasauga	Candidate	Will	Graminoid dominated plant communities (fens, sedge meadows, peatlands, wet prairies, open woodlands, and shrublands)

According to an on-line review of federally Endangered, Threatened, Proposed, and Candidate Species (USFWS, March 2011), nine species are listed for Will, Grundy, and Livingston Counties, Illinois. Of the nine species, three are listed as endangered:

- Indiana bat (*Myotis sodalis*),
- Hine's emerald dragonfly (*Somatochlora hineana*),
- Leafy-prairie clover (*Dalea foliosa*)

Three species are listed as threatened:

- Eastern prairie fringed orchid (*Platanthera leucophaea*)
- Lakeside daisy (*Hymenoxys acaulis* var. *glabra*)
- Mead's milkweed (*Asclepias meadii*);

Three species are listed as candidate species:

- Massasauga rattlesnake (*Sistrurus catenatus catenatus*)
- Sheepnose mussel (*Plethobasus cyphus*)
- Snuffbox mussel (*Epioblasma triquetra*)

In 2007, the USFWS indicated that no Indiana bats were located in the six-county Chicago metropolitan area, based on extensive surveys over two years in various locations. The proposed project will not affect the Indiana bat as this species has not been observed in northeastern Illinois. Prairie habitat is located within and adjacent to the project area. As a result, habitat conditions may be suitable for the leafy prairie clover, eastern prairie fringed orchid, lakeside daisy, Mead's milkweed, and the eastern Massasauga rattlesnake. A review of the Illinois Mollusk Collection Database indicates that the sheepnose mussel has not been identified in streams in the project area. The snuffbox mussel has been identified in the Kankakee River within Will County. Because instream work will be minimal for this project, the proposed action will not affect these mussel species. Spring fed wetlands or other habitat suitable for the Hines emerald dragonfly may be present within the project limits. However, there are no known populations of the Hines emerald dragonfly present within the project limits.

State Listed Species

Utilizing the IDNR's Ecological Compliance Assessment Tool (EcoCAT), a review of the Illinois Natural Heritage Database was conducted for the project corridor on March 29, 2011, for informational purposes (IDNR Project No. 1110629). The IDNR response documentation is included in Appendix D. This information was obtained by IDNR through the Natural Heritage Database.

3.0 Environmental Resources, Impacts and Mitigation

Utilizing the IDNR's Ecological Compliance Assessment Tool (EcoCAT), a review of the Illinois Natural Heritage Database was conducted for the project corridor. The results identified the potential for the following plant and animal species⁴.

Plants:

- Ear-Leafed Foxglove (*Tomanthera auriculata*)-Threatened
- Grass Pink Orchid (*Calopogon tuberosus*)-Endangered
- Large Cranberry (*Vaccinium macrocarpon*)-Endangered
- Oklahoma Grass Pink Orchid (*Calopogon oklahomensis*)-Endangered
- Tubercled Orchid (*Platanthera flava* var. *herbiola*)-Endangered

Animals:

- Black Sandshell (*Ligumia recta*)-Threatened
- Blanding's Turtle (*Emydoidea blandingii*)-Endangered
- Eryngium Stem Borer (*Papaipema eryngii*)-Endangered
- Loggerhead Shrike (*Lanius ludovicianus*)-Endangered
- Ornate Box Turtle (*Terrapene ornata*)-Threatened
- Pallid Shiner (*Hybopsis amnis*)-Endangered
- River Redhorse (*Moxostoma carinatum*)-Threatened
- Salamander Mussel (*Simpsonaias ambigua*)-Endangered
- Upland Sandpiper (*Bartramia longicauda*)-Endangered
- Western Sand Darter (*Ammocrypta clarum*)-Endangered

3.2.3.2 Potential Impacts

The project would occur primarily within the existing railroad ROW, which has been significantly disturbed in most places. Detailed surveys were not conducted throughout the entire length of the project. Because of the potential presence of small isolated prairie remnants that may still be present, there is the possibility that isolated species could be observed. Potential impacts to sensitive habitat will be evaluated as engineering plans are developed.

3.2.4 Special Lands

Utilizing the IDNR's EcoCAT, a review of the Illinois Natural Heritage Database was conducted for the project corridor. The EcoCAT search identified 16 protected resources in the vicinity of the project area, identified as:

- Markgraf Quarry INAI site
- Braidwood Dunes and Savanna Class III Groundwater Site
- Braceville Railroad Prairie INAI Site

⁴ IL Threatened and Endangered checklist 2/22/2011 http://www.dnr.state.il.us/ESPB/pdf/2011_Checklist.pdf

- Braidwood Dunes And Savanna INAI Site
- Godley Railroad Prairie INAI Site
- Hitts Siding Prairie INAI Site
- Joliet Army Ammunition Plant INAI Site (located in Midewin National Tallgrass Prairie)
- Kankakee River INAI Site
- Manhattan Creek INAI Site
- Mazon River Bed INAI Site
- Mazonia Railroad Prairie INAI Site
- Wilmington Geological Area INAI Site
- Wilmington Shrub Prairie INAI Site
- Wilmington West Geological Area INAI Site
- Braidwood Dunes And Savanna Nature Preserve
- Hitts Siding Prairie Nature Preserve
- Wilmington Shrub Prairie Nature Preserve

A review of the INAI Sites by county list (December 2010) identified the Markgraf Quarry, Wilmington Geological Area, and Wilmington West Geological Area as Category IV, which defines the INAI site as having outstanding geological features. Manhattan Creek and Mazon River Bed were identified as Category VI, which defines the INAI site as having unusual concentrations of flora or fauna and high quality streams. The Wilmington West Geological Area is located directly adjacent to the railroad. The project would not impact the Markgraf Quarry, Wilmington Geological Area, Wilmington West Geological Area, or Manhattan Creek as the project would occur entirely within the existing railroad ROW. Additionally:

- The project would not impact the Braidwood Dunes and Savanna INAI Site or Braidwood Dunes and Savanna Nature Preserve, as this site is located more than one half mile east of the project corridor.
- The project would not impact the Wilmington Shrub Prairie INAI Site or Wilmington Shrub Prairie Nature Preserve, as this site is located more than one half mile east of the project corridor.

The Godley Railroad Prairie, Mazon River Bed, Mazonia Railroad Prairie, Braceville Railroad Prairie, Hitts Siding Prairie, Kankakee River, and Joliet Army Ammunition Plant INAI Site are located directly adjacent to the railroad ROW.

There are no public or private parks within the project corridor. As such, there are no lands affected by the build alternative that involve use of lands that have Land and Water Conservation Act (LAWCON) of 1965 (Title 16 *United State Code* Section 4601-4) funds or Open Space Lands Acquisition and Development (OSLAD) Act (Chapter 525 *Illinois Compiled Statutes* 35/) funds involved in their purchase or development.

3.0 Environmental Resources, Impacts and Mitigation

The majority of the project area is contained within UPRR ROW except for the structures at the stream crossings.

3.2.5 4(f) Properties

An inventory of 4(f) properties within 1000 feet of the project corridor was conducted. Parks in the vicinity of the project area include a park administered by the Joliet Park District, approximately 1,100 feet to the east (east of Illinois Route 53) of the culvert proposed at MP 38.8. For the bridge at MP 42.6, there are no parks, although there is zoning for a future facility, located approximately 1,900 feet northeast of the bridge location. Lastly, for the bridge at MP 44.4, there is one park, administered by the Village of Elwood, slightly more than 680 feet to the southwest of the bridge. The MNTP, administered by the U.S. Forest Service, is located directly adjacent to the project corridor. The Godley Railroad Prairie, Mazonia Railroad Prairie, Braceville Railroad Prairie, and Hitts Sidding Prairie are located directly adjacent to the project corridor. The Mazon River Bed and the Kankakee River are INAI Sites located within the Mazon River and the Kankakee River, respectively, within the project corridor.

The review identified six potential 4(f) properties in the vicinity of the project area and one 4(f) property (MNTP) adjacent to the project corridor, as identified in Table 3-15.

Table 3-15. 4(f) Properties

Project Component		4(f) Property	Location	Distance from UPRR ROW (feet)	Uses Section 4(f) Land
110 mph Project Corridor	2 nd Mainline Track	Joliet Union Station (Amtrak)	West of track - 50 East Jefferson Street, Joliet	Next to track	Existing elevated double track -No 4(f) land used
		East Side National Register District	East of track – Between E. Clinton and E. Jefferson Street	500 +	
		Nowell Park	East of track – South Chicago Street	400 +	
		Osgood Park	East of track – South E. Osgood Street	Next to track	
		Village of Elwood Park	East of track	600+	
	110 mph improvements	Midewin National Tallgrass Prairie	Former Joliet Arsenal Site	Several miles east and west of the project corridor	Existing ROW – No 4(f) land used
		Abraham Lincoln National Cemetery	West of track -Former Joliet Arsenal Site	Property next to UPRR ROW	
	Mazonia Siding	No 4(f) properties within 1000 feet of track	N/A	N/A	N/A

The MNTP is located in part of the former Joliet Army Ammunition Plant in Elwood between Hoff Road (MP 46.4) and Arsenal Road (MP 50.7). Midewin was established in 1996 as the first national tallgrass prairie in the United States under the Illinois Land Conservation Act (ILCA) and includes 19,000 acres, which is the largest prairie restoration project east of Mississippi River. The ILCA of 1994 (P.L. 104-106) (Sec 2915(a)), the legislation that established Midewin, included a prohibition against the construction of new through roads. This section did grant authorization of rights-of-way for utilities. However, railroads are not recognized as utilities.

The Abraham Lincoln National Cemetery lies in the northwestern area of the former Joliet Army Ammunition Plant, west of the project corridor and is consider a public park. There are several active prairie restoration project areas immediately adjacent to the rail corridor. On the west side of the existing UPRR corridor, a 66-foot utility right-of-way has been previously granted to NICOR Gas Company that is protected under the ILCA act.

The project would not impact MNTP or the Lincoln Cemetery as construction would occur entirely within the existing UPRR ROW. Therefore, the project will not use lands subject to the requirements of Section 4(f) of the Department of Transportation Act of 1966.

There are no section 4(f) properties located within the vicinity of the Mazonia siding project corridor, therefore, the project will not use lands subject to the requirements of Section 4(f) of the Department of Transportation Act of 1966.

3.3 Human Environment

The purpose of this section is to describe the characteristics of the Human Environment within the area that is to be served or affected by the proposed project. Included in this section is a discussion of the anticipated transportation, socioeconomic, environmental justice, public health and safety, hazardous materials, and cultural resource effects of the Preferred Alternative. Where appropriate, mitigation measures are identified.

Agencies Involved in Transportation and Planning

The Policy Committee of the Chicago Metropolitan Agency for Planning (CMAP) is the designated Metropolitan Planning Organization for the northeastern Illinois region, which includes Will County. CMAP was formed in 2005 by combining the region's two previously separate transportation and land-use planning organizations – the Chicago Area Transportation Study (CATS) and the Northeastern Illinois Planning Commission (NIPC) -- into a single agency. The CMAP Go To 2040 Comprehensive Plan was adopted on October 13, 2010. GO TO 2040 is the long-range comprehensive plan for the Chicago region that includes Cook, DuPage, Kane, Kendall, Lake, McHenry, and Will counties.

The Regional Transportation Authority (RTA) is a fiscal oversight agency responsible for the overall budgets and financial condition of the three operating agencies or “service boards” – Chicago Transit Authority (CTA), Metropolitan Rail Corporation (Metra), and Pace. Other agencies, such as the Illinois Department of Transportation, and the Will County Department of

3.0 Environmental Resources, Impacts and Mitigation

Highways (WCDH) have transportation planning responsibilities in the study area. The Will County 2030 Transportation Plan was recently completed and adopted by the Will County Board in April 2009.

Grundy and Livingston County are designated a non-metropolitan area and are primarily rural. The Grundy County Expanded Area Transit System provides on-call shuttle service to the communities located within the project area located in Grundy County. Livingston County is included within a Small Urban Service Area that includes McLean, Ford and Iroquois Counties. IDOT coordinates transportation planning activities with local agencies in Grundy and Livingston County. The Illinois State Transportation Plan was completed in December 2007.

Table 3-16 lists the regional, agency and municipal plans that were considered in this EA.

Table 3-16. Completed Agency and Municipal Plans

County	Project	Agency/Municipality	Name of Plan	Adoption Date
Will	110 mph Service 2 nd Mainline Track	City of Joliet	South Side Comprehensive Plan	March 6, 2007
		Chicago Metropolitan Agency for Planning	2030 Regional transportation Plan	October 9, 2008
		Joliet Arsenal Development Authority	Joliet Arsenal Long-Range Transportation Plan	April 2004
		Pace Bus	Vision 2020	December 21, 2001
		U.S. Department of Agriculture Forest Service	Midewin Prairie Plan (FEIS)	2002, amended 6/26/08
		Will County	Land Resource Management Plan	April 18, 2002
		Will County	2030 Transportation Plan	April 2009
		Village of Elwood	Comprehensive Plan	September 2, 2003
		City of Wilmington	Comprehensive Plan	September 16, 2008
	110 mph Service Mazonia Siding	City of Braidwood	Comprehensive Plan	December 2004
	110 mph Service	Village of Godley*	Comprehensive Plan	2006
Grundy	110 mph Service	Grundy County	Grundy County Draft Comprehensive Economic Development Strategy 2011 - 2016	January 2011
		Village of Braceville	Comprehensive Plan	April 2006
		Village of Gardner	Comprehensive Plan	2006
		Village of Dwight	Comprehensive Plan	1998
Livingston				

* Village of Godley is located in Will and Grundy County

2nd Mainline Tract Project between MP 36.7 and MP 44.69

A number of local municipal and agency plans have also been prepared previously addressing various components of the project area. Joliet and Elwood have both prepared comprehensive plans with a transportation and land use component. However, the Joliet South Side Comprehensive Plan, adopted March 6, 2007, does reflect many of the recent land use changes in the project area due to the recent construction of the Joliet Intermodal Yard and CenterPoint Industrial Park. The plan does provide an inventory of demographics, land use, community facilities and natural resources in area surrounding the project corridor. Based on a discussion with the City of Joliet the plan polices do not reflect current market conditions and are not in effect at this time.

The Joliet Arsenal Development Authority has prepared the Joliet Arsenal Long Range Transportation Plan (2004) and is currently updating this plan. This document is a subarea plan to the Will County 2030 Transportation Plan and recommends transportation strategies for a study area bounded by I-80 to the north; Wilmington-Peotone Road to the south; I-55 to the west; and Cedar road to the east.

The Joliet Arsenal is a converted army ammunition plant and is in the process of being converted into the MNTP, National Veterans Cemetery (Abraham Lincoln National Cemetery), the Center Point Intermodal Center, and Prairie View Business Park. The overall purpose of the Joliet Arsenal plan is to identify, evaluate, and recommend the transportation strategies required to serve existing and planned development in the area. The recommendations include improvements to the roadway facilities in the near the project corridor.

Mazonia Siding Track between MP 55.0 and MP 57.13

Parcels west of the UPRR ROW are within the municipal limits of the City of Braidwood. Between east 1st Street and Coal City Road, the area is residential. Commercial land uses and downtown Braidwood is located south of east 1st Street. The Braidwood Recreation Club (private club within unincorporated Will County) is located east of the UPRR ROW between 1st Street and Coal City Road. Commercial land uses and downtown Braidwood are located south of east 1st Street.

While these plans show improvements to the local system, some of the plans also reflect desired enhancements to the county, state, and other regional systems serving their municipality and surrounding areas.

3.3.1 Transportation

This section summarizes the transportation impacts expected under the No-Build and Preferred alternatives. Under the current schedules, there are about 15 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and five UPRR freights (a combination of local and through trains).

3.3.1.1 Projected Ridership

This project would benefit existing medium- and long-distance Amtrak service including the Lincoln Service between Chicago and St. Louis; the Kansas City Mule and Ann Rutledge trains between St. Louis and Kansas City, MO; and the Texas Eagle, providing service between Chicago and St. Louis, and then southwest to Little Rock, AR, Dallas/Ft. Worth, TX, and other points west to Los Angeles, CA. These trains serve one suburban Chicago stop and eight intermediate stops between Chicago and St. Louis, including Joliet, Bloomington-Normal and Springfield, IL. The proposed project would result in improvements to on-time-performance on the existing Chicago-St. Louis route. Based on Amtrak ridership projections, the project would have an increase ridership of 21,300 riders with a 9-minute running time reduction.

There are no changes proposed in the number of Amtrak trains in the project corridor. As a result, the No-Build and Preferred Alternative are not projected to divert additional travelers from other modes, as both alternatives are a continuation of existing Amtrak service.

For reference purposes only, the ridership for the alternatives reviewed in the Chicago-St. Louis Draft Environmental Impact Statement is presented in Table 3-17.

Table 3-17. Existing and Projected (2010) Annual Person Trips (1,000s) in the Chicago-St. Louis Corridor

Mode	Alternative					
	Existing (1998)		No-Build (2010)		Preferred (2010)	
	Trips	Percent	Trips	Percent	Trips	Percent
Rail	271	0.8	406	0.9	602	1.3
Air	1,109	3.2	1,391	3.1	1,277	2.9
Bus	98	0.3	211	0.5	204	0.5
Auto	33,675	95.8	42,750	95.5	42,685	95.3
TOTAL	35,153	100	44,758	100	44,768	100

Source: Chicago-St. Louis Draft Environmental Impact Statement (2003)

3.3.1.2 Additional Impacts to Rail Operations

The project would result in improvements to on-time-performance on the existing route and provide for shorter trip times; thus, the project would not have a detrimental effect on other railway operations.

Freight Traffic

No-Build Alternative: Under the current schedules, there are about five UPRR freights operating over this section of line (a combination of local and through trains). With the full opening of the Joliet intermodal terminal, existing UP freight operations would increase from 6 to 12 daily trips under the No-Build Alternative.

Preferred Alternative: As part of the FRA Track 1a application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of improvements in the project corridor. However, the actual freight train speeds on this section of line would not increase due to this work – freight trains on the mainline track would continue to operate at 60 mph. The Preferred Alternative will encompass the extension of the 110 mph speed limit for Amtrak trains approximately 36 miles from Dwight to Joliet.

Commuter Rail Service

The Joliet Union Station serves as the terminal station for the Metra's Rock Island service and Heritage Corridor service, as well as serving as an Amtrak station stop. The Metra Rock Island Mainline is a single track east-west mainline that crosses both the Burlington Northern Santa Fe (BNSF) double-track north-south mainline and the UP double-track north-south mainline located east of the BNSF at grade. The Joliet Union Station is located on the northeast quadrant of the interlocking. Amtrak's Texas Eagle and Lincoln Service share the same tracks with Metra Heritage Corridor from Union Station to Joliet.

No-Build Alternative: No changes to existing Metra commuter rail service to the Chicago area would be required with the No-Build Alternative. Future commuter rail service is assumed to be the same as existing service.

Preferred Alternative: The project would not result in changes in the number of commuter trains operating daily, and scheduling modifications are not anticipated. Under the Preferred Alternative, intercity passenger service would operate on the same tracks as the Metra Heritage Corridor Line between Chicago Union Station and Joliet. Through this area existing maximum speeds would be maintained.

Amtrak Rail Service

Joliet is Amtrak's second-busiest station in suburban Chicago with over 34,000 passenger boardings and alightings on an annual basis and ten trains each day on the Chicago/St. Louis corridor, including the Lincoln Service which has seven trains daily and the Texas Eagle which runs two trains daily between Chicago and San Antonio with three weekly connections to New Orleans and Los Angeles. The Lincoln Service also stops in Dwight. The Ann Rutledge Service runs one daily connection through Joliet between Chicago and St. Louis and does not stop in Dwight.

No Build Alternative: Under the No-Build Alternative, no major changes to station access would occur between Joliet and Dwight.

Preferred Alternative: The improvements in the project corridor would decrease travel times and increase operational reliability for Amtrak trains passing through the corridor from Joliet to Dwight. No changes are proposed to the existing Amtrak stations in Joliet.

3.0 Environmental Resources, Impacts and Mitigation

No-Build Alternative: Under the No-Build Alternative, construction would be limited to those projects included in the 2003 FEIS between Dwight and St. Louis.

Preferred Alternative: In general, construction activities for the 110 mph project corridor including the second mainline track and Mazonia Siding and signal improvements would result in two types of impacts. The first impact would be the requirement to reduce the operating speeds through the construction zones, which would add to rail travel time and, in turn, increased cost. The second impact would be the need to adjust the schedule of existing operations to create windows of opportunity for construction activities that require temporary shutdown of rail operations on selected track sections for a limited time.

Permission from the railroad owners will be required for construction that would take place within the railroad right-of-way. Schedule adjustments will be required when construction activities will directly impact the mainline track, such as when the new turnouts are being placed for the passing sections, or when there is a potential safety risk, such as during the construction of grade crossings. Some of these activities may require up to eight hours of continuous track closure.

Construction activities for the 110 mph passenger service will include use of a Track Renewal Train (TRT) to install new rail and concrete ties along the existing mainline. This work will also include resurfacing of the stone ballast, renewal of crossing surfaces and approaches, and upgrade of the signals and crossing warning systems.

3.3.1.3 Intermodal Connections

The Joliet Station site offers intermodal opportunities for connection to existing transportation services. Amtrak Lincoln Service and Texas Eagle Service currently serve Joliet Union Station. Parking is available at the Joliet Amtrak station. No intermodal services are provided at the Dwight station, which is located south of the project limits.

Metra's Heritage Corridor also provides service to downtown Chicago and other intermediate stations. The Rock Island service also serves downtown Chicago though different intermediate stations along a more easterly route.

Pace Bus Service provides extensive service to the Joliet area, including Pace Route 834 to the Lockport Metra Station on the Heritage Corridor. Pace Routes 501, 504, 505, 507, 508, 509, 511, 832, and 834 currently serve the Joliet Amtrak Station. Pace Bus route 511 operates between Joliet City Center, Elwood and CenterPoint Intermodal Center. Parking is also available at both the Lockport and Joliet Metra Stations.

No Build Alternative: Under the No-Build Alternative, no changes to intermodal connections at the Joliet Union station would occur.

Preferred Alternative: Under the Preferred Alternative, no changes to intermodal connections at the Joliet Union station or the Dwight station would occur.

3.3.1.4 Additional Impacts to Vehicular Operations

Grade Crossings

No-Build Alternative: Under the No-Build Alternative, only planned grade crossing improvements included in the 2003 FEIS would be included between Dwight and St. Louis.

Preferred Alternative: All of the grade crossings from Joliet to Dwight in the project area were evaluated as part of the EA process. Grade crossings could be temporarily impacted by the track upgrades from 110 mph service as well as by the construction of the second mainline track and crossovers.

The UP mainline from Joliet to Dwight crosses through areas of different land use. Starting at MP 36.7, the mainline is in an urbanized setting in the City of Joliet. As the mainline progresses southward it crosses through suburban and into rural areas. Vehicular crossings are mainly underpasses of the mainline in the urbanized and suburban areas. Once in the less developed rural areas, the crossings become at-grade. Each at-grade crossing is outlined in Table 3-18. A detailed summary of the grade crossing diagnostic evaluation can be found in Appendix G.

All public grade crossings located within the project corridor will be upgraded from the existing warning devices to four-quadrant gates with vehicle detection equipment.

By agreement with the Illinois Commerce Commission (ICC) and the FRA-Office of Safety, the private at-grade crossings will also be required to have four-quadrant gate installations and vehicle detection equipment.

For private crossings located on farming property, the crossing is primarily used to move farming equipment from one field to another on farms that are bisected by a rail line. In this situation, the crossing is proposed to receive a Field-to-Field Treatment that will incorporate a locked, reduced-access gate system. Both the land owner and Emergency Medical Services will have access to release this locked system when no trains are within the approach circuits.

In addition to the crossing upgrades, signals along the project corridor would be upgraded to Centralized Traffic Control which would allow for safer train movements through these grade crossings as well as the railroad network.

These upgrades will allow for efficient train movements in this area and, therefore, the grade crossings would not be adversely impacted. These improvements may serve to reduce the traffic delay at these crossings as well as adjacent crossings. At this time no increase in the number of passenger trains or operating speed of freight trains are planned in the project area.

3.0 Environmental Resources, Impacts and Mitigation

Federal Highway and State, and Local Roads

The FHWA has reviewed the project and determined there would no impact to the interstate system for 2nd Mainline Track Project and Mazonia Siding Project. The review letter from FHWA is located in Appendix B. The FHWA is currently reviewing the proposed 110 mph service between Joliet and Dwight

Existing Traffic Volumes

Because rail crossings in the urbanized areas are grade separated, average daily traffic on roads that cross the mainline was collected only for roads that have at-grade crossings. The average daily traffic (ADT) data is shown in Table 3-19.

The most heavily travelled roadway in the vicinity of the mainline in the rural area south of Joliet to Elwood is Illinois Route 53 (IL 53). IL 53 runs north to south just east of the UPRR tracks and is the main N/S highway between Dwight and Joliet serving as a collector for the local roads that intersect it. Illinois 53 has several businesses and residences located along the facility as well as a major special trip generator in the Chicago Speedway, which has impacts on the level of traffic only during certain times of the year. The next major north/south road east of IL 53 is US 52 and the next major N/S road to the west is I-55.

IL 53 features a four-lane divided highway south of Joliet and a four-lane arterial in Joliet. The facility includes dedicated turning lanes at several intersections in Joliet and in rural areas. Traffic signals are present at several intersections along the corridor in Joliet with few to none once the route leaves the city limits. There are many access points to IL 53 from residences and businesses as well as the intersecting east/west local roads.

Land development along the railroad ROW would normally lead to vehicular impacts at grade crossings. However, in downtown Joliet and south of Joliet, there are existing overpasses and underpasses of the UPRR track. Once south of the city, the area surrounding the mainline is largely agricultural. In addition the area west of the mainline north of Manhattan Road to the Des Plaines River has limited access because of the river. Because of the limited access it is assumed that these roads only serve local traffic and have no through traffic between IL 53 and the river.

The higher ADT on Laraway Road is most likely due to the proximity of the count location to the elementary school located near the Laraway Road rail crossing, therefore being subject to trips to and from the school. The higher ADT on Manhattan Road can be attributed to the facility being a Will County Highway (Highway 17) and a link between IL 53 and I-55.

Hoff Road in Elwood provides access to an industrial area of the Village. Several warehouses can be accessed from Hoff Road. Automobile and truck volumes were high near this crossing. Prairie Creek Grain Company in Elwood generates substantial truck traffic. This facility is located off IL 53 between Elwood and Wilmington. River Road in Wilmington is a two-lane county highway and also generates a larger quantity of both

Table 3-19. ADT of Roads within or near Project Corridor

Source: IDOT

automobile and truck traffic. This highway intersects with IL 53 to the east and US 55 to the west.

Coal City Road is a rural two-lane roadway approximately halfway between Wilmington and Braidwood. There are no businesses or residence located near the UPRR grade crossing. Main Street is a local two-lane roadway (east-west) through the City of Braidwood.

Construction Related Impacts on Vehicular Traffic

No-Build Alternative: Under the No-Build Alternative, construction would be limited to regular maintenance activities. Therefore, impacts to vehicular traffic would be minimal.

Preferred Alternative: Under the Preferred Alternative, vehicular traffic would be temporarily impacted to varying degrees at locations where grade crossings would be modified or improved. The grade crossing improvements would, at a minimum, require traffic to slow down as it passes through the construction zone while new warning devices and other improvements would be installed. In some cases, temporary diversion of traffic to adjacent crossings could be required.

These impacts to vehicular traffic could affect emergency services, schools, businesses, local festivals, and other activities requiring vehicular access. However, all of the construction related impacts on vehicular traffic would be temporary and are considered minor.

3.3.1.5 Parking

No changes to related parking are proposed under the project.

3.3.1.6 Safety

Proposed upgrades to the signals and crossing warning systems are intended to provide a safer corridor for both vehicular and rail traffic.

A review of IDOT grade crossing accident data from 2006 to 2010 found a total of 31 reported accidents within the project corridor during that five year duration. Of those accidents, there were zero fatalities. Two of the 31 accidents were train related.

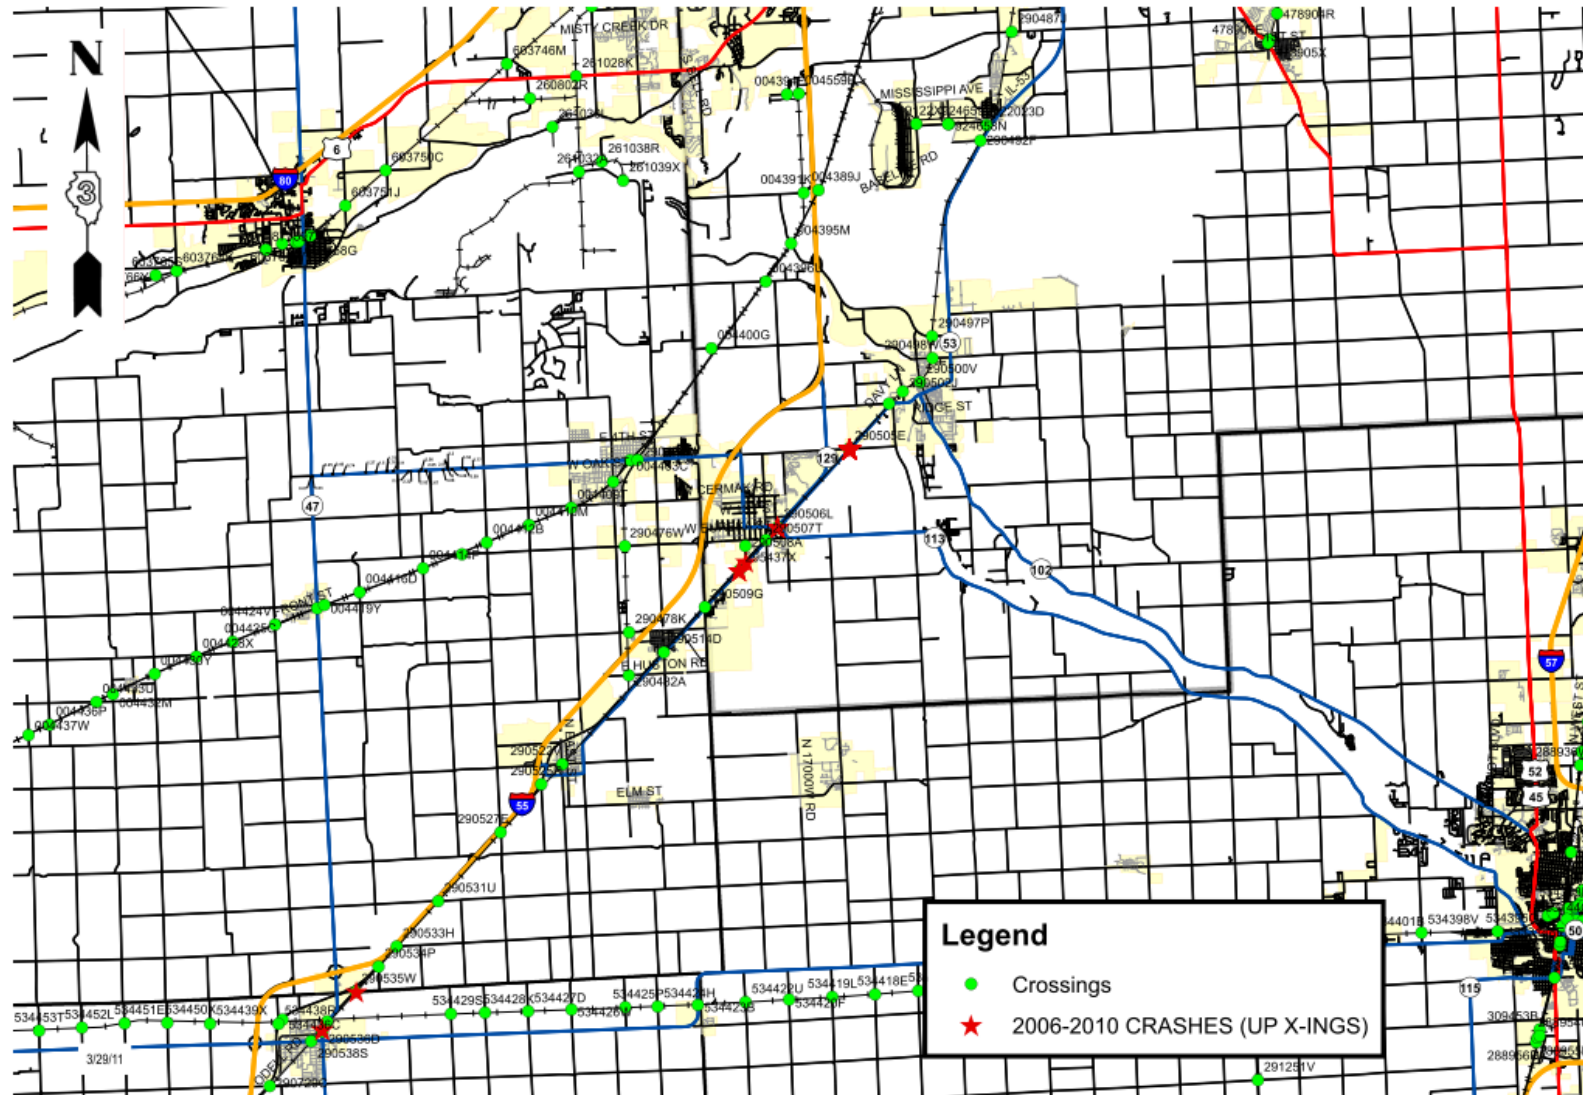

Figure 3-3 shows 2006 to 2010 IDOT crash data for the area within the project corridor. Figure 3-4 shows a summary of the collision type for each of those accidents.

3.3.1.7 Impacts to Operations on Navigable Waters

There are no crossings of navigable waters within the project corridor.

3.0 Environmental Resources, Impacts and Mitigation

Figure 3-3. 2006 to 2010 IDOT Crash Data for Crossings from Joliet to Dwight

Source: IDOT, District 3

Figure 3-4. 2006 to 2010 IDOT Crash Data for Crossings from Joliet to Dwight – Collision Type

Source: IDOT, District 3

3.3.2 Socioeconomics and Land Use

3.3.2.1 Relocations

No relocations would be acquired. Construction at project sites could require temporary road closures. Temporary easements or purchase of ROW may need to be obtained by UPRR for construction access and to stage materials; however, these easements would not require the relocation of businesses or residences. ROW purchases will be conducted following the Uniform Relocation Assistance and Real Property Acquisition Act of 1970 (Uniform Relocation Act) (Title 42 *United States Code* Sections 4601-4655), as amended applies to all federal or federally assisted activities that involve the acquisition of real property or the displacement of residences or businesses. The IDOT will implement the provisions of the State of Illinois Relocation Assistance Plan in accordance Uniform Relocation Act.

3.3.2.2 Community Services and Facilities

Schools, medical centers, and fire and police stations serve the daily needs of residents along the corridor for the Preferred Alternative. The project corridor provides access to and from educational and medical facilities and plays a critical role in providing these services, and in serving the health, safety and general welfare of those who use them. Within the project corridor, public service districts typically overlap the railroad.

2nd Mainline Track Project between MP 36.7 and MP 44.69

The project corridor is located within the municipal boundary limits for Joliet and Elwood. Jurisdictionally, the City of Joliet currently has pertinent boundary agreements with the Village of Elwood to the South. The municipal boundary between Joliet and Elwood is located at Noel Road. Along the UPRR corridor, the boundary extends further south to behind the parcels along the north side of the Manhattan Road corridor. Existing land between Downtown Joliet and the Village of Elwood is primarily agricultural and rural single-family.

Joliet and Elwood are served by municipal police and fire departments. In times of emergency, fire district teams from adjacent jurisdictions share equipment and personnel. Private ambulance companies also operate in communities along the corridor. Health care facilities are generally located in Joliet. Emergency routes for fire, police and ambulance services provide direct access to these medical facilities. Similar to school bus routes, emergency routes typically incorporate section line roads in this area. There is one elementary school adjacent to the project corridor at Laraway Road.

110 mph Project Corridor between MP 44.69 and MP 55.0

Between Elwood and Wilmington there is one grain elevator operation along the project corridor with a private grade crossing near MP 49.7. The Prairie Creek Grain Company is located at 29400 S. Route 53 and the property contains grain silos and buildings east and west of track. This area of project corridor is also located near the MNTP. The Midewin park offices is located at 30239 S. State Route 53. South of Midewin, the project corridor traverses southwest through Wilmington and the Kankakee River Valley. West of Wilmington, the corridor runs parallel to Route 53.

Mazonia Siding Track between MP 55.0 and MP 57.13

The project corridor is predominantly located within the municipal boundary limits of the City of Braidwood. Approximately .75 miles of the project area east of the UPRR ROW is located within unincorporated Will County. However, the City of Wilmington boundary extends southwest along the UPRR ROW in this area. Existing land is primarily rural single-family residential and private outdoor recreation area.

Braidwood was a center of the coal mining industry in the late 1860's into the 1970's. Strip mining east and west of the UPRR Corridor began in the early 1900's and lasted until 1970. The strip mined areas became private recreational areas and housing developments. The area southeast of the project corridor is located adjacent to the Braidwood Recreation Club. The Braidwood Recreation Club is a non-profit private outdoor recreation club. A 9-hole golf course lies adjacent to along the southeast boundary of the UPRR ROW. The land area on the west side of the UPRR ROW is located within the Shadow Lakes Resort. This development is also a reclaimed strip coal mine.

110 mph Project Corridor between MP 57.13 and MP 72.8

This section of the 110 mph project corridor runs southwest and parallel to IL Route 53 through Briadwood, Godley, Bracville, and Gardner. The project terminates at MP 72.8 on the northeast side of Dwight.

No-Build Alternative: Under the No-Build Alternative and Preferred Alternative, construction would be limited to regular maintenance activities. Therefore, impacts to community facilities would be minimal.

Preferred Alternative: Under the 2nd Mainline Tract Project, the Laraway Elementary School would be temporarily impacted to varying degrees at the Laraway road grade crossing. The grade crossing improvements would, at a minimum, require traffic to slow down as it passes through the construction zone while new warning devices and other improvements are installed. In some cases, temporary diversion of traffic to adjacent crossings might be required.

Under the 110 mph project corridor between Elwood and Wilmington, grade crossings are located at County Highway 44, Kankakee River Drive, N. Kankakee Street, North 1st Street and West Strip Mine Road. In some cases, temporary diversion of traffic to adjacent crossings might be required. Route 53 or West Baltimore Street provides the only bridge over the Kankakee River in Willmington. The next nearest crossing is Il-55, which is located more than five miles northwest of the Route 53 bridge.

Under the Mazonia siding project, grade crossings at Coal City Road and Main Street would be temporarily impacted to varying degrees. The grade crossing improvements would, at a minimum, require traffic to slow down as it passes through the construction zone while new warning devices and other improvements are installed. In some cases, temporary diversion of traffic to adjacent crossings might be required. At Main Street the nearest crossing is located 0.4 mile south at South Center Street. Coal City Road is located 2.5 miles north of Main Street. West Strip Mine Road is located 1.4 miles north of Coal City Road.

Under the 110 mph project corridor between Mazonia Siding and Dwight, grade crossings are located at S. Center Street, S. Division Street, N. Kankakee Road, N. Mitchell Street, S. Carbon Hill Road, E. Washington Street, Division Street, N, Jackson Street, County Road 29, S. Maher Road, and Livingston Road.

These impacts to vehicular traffic could affect emergency services, schools, businesses, local festivals, and other activities requiring vehicular access. However, all construction related impacts on vehicular traffic would be temporary and considered minor. Construction phasing will be coordinated with the local governments, school districts and other service providers in order to mitigate any impacts due to temporary road closures. Table 3-20 shows the community facilities located near the project corridor.

3.0 Environmental Resources, Impacts and Mitigation

Table 3-20. Community Facilities

Project Component		Community Facility	Location	Distance from UPRR ROW (feet)	Impact
110 mph Project Corridor	2 nd Mainline Track	Prince of Peace Church	East of track - E. Cass Street, Joliet	250	Existing elevated double track -No impact No impact
		Silver Cross Baseball Stadium	East of track – Between E. Clinton and E. Jefferson Street	75	
		Joliet Amtrak Station	East of track – south of E. Jefferson Street	Next to track	
		Joliet Metra Station	West of track – north Scott Street	Next to track	
		Nowell Park	East of track – South Chicago Street	400 +	
		Osgood Park	East of track – South E. Osgood Street	Next to track	
		Laraway Elementary School	East of track – Laraway Road	Property next to UPRR ROW	Temporary grade crossing closure during construction
	110 mph improvements	Midewin Park Office	30239 S. State Route 53	Several miles east and west of the project corridor	No impact
		Prairie Creek Grain Company	East and West of track at MP 49.6	Property next to UPRR ROW	Temporary grade crossing closure during construction
		Abraham Lincoln National Cemetery	West of track –W. Hoff Road	Property next to UPRR ROW	Temporary grade crossing closure during construction
		Riverside Medical Center	East of track – W. Baltimore Road	.25 miles	Temporary grade crossing closure during construction
	Mazonia Siding	Shadow Lakes (private development)	East of track	Property next to UPRR ROW	No impact
		Braidwood Recreation Club (private non-profit development)	West of track	Property next to UPRR ROW	No impact
	110 mph improvements	North Wilmington	East and West of track	No community facilities next to track	No impact
		Downtown Braidwood	East and West of track	No community facilities next to track	Temporary grade crossing closure during construction
		Braidwood Nuclear Power Plant	West of track and IL 53	100	Temporary grade crossing closure during construction
		Village of Godley	East of track and IL 53	100	Temporary grade crossing closure during construction

Project Component		Community Facility	Location	Distance from UPRR ROW (feet)	Impact
		Village of Braceville	West of track and IL 129	100	Temporary grade crossing closure during construction
		Village of Gardner	East and West of track	100	Temporary grade crossing closure during construction
		Village of Dwight	East and West of track	100	Temporary grade crossing closure during construction

3.3.3 Demographics

The Joliet to Dwight track project begins in downtown Joliet, at E. Jackson Street (MP 36.7) approximately one block south of State Highway 63, and generally extends in a southwest direction through the Village of Elwood, City of Wilmington, City of Braidwood and the Village of Godley in Will County. In Grundy County, the project corridor travels primarily through unincorporated areas and the Villages of Braceville and Gardner. The project corridor terminates within Livingston County, north of the Village of Dwight, at North Union Street (MP 72.8).

A buffer extending 1,000 feet east and west from the UPRR ROW was used to inventory demographic characteristics of the Joliet to Dwight project corridor. The buffer was then subdivided into five sections in order to summarize the demographic data.

1. Downtown Joliet (MP 36.8 to E. Washington Street)
2. South Joliet Area 1 (E. Washington Street to (S. Chicago Street)
3. South Joliet Area 2 (S. Chicago Street to Laraway Road)
4. Joliet/Elwood (Laraway Road to MP 44.69)
5. Elwood to Dwight (MP 44.69 to MP 72.8)

3.3.3.1 Population and Households

The 110 mph project corridor is approximately 36 miles long and has an estimated 2010 population of 7,910 within the buffer along the rail between Joliet and Dwight (Table 3-17). Approximately 50 percent (3,236) of the corridor population and 33 percent of the households (911) are located within Joliet and along the area for the 2nd Mainline Track project.

2nd Mainline Tract Project between MP 36.7 and MP 44.69

The 2nd mainline track project corridor is approximately eight miles long and has an estimated 2010 population of 3,236 within the buffer along the rail between Joliet and Elwood (Table 3-21). As of 2010, the estimated population was 140,449 in the City of Joliet and 712,697 in Will County, making it one of the fastest growing counties in Illinois and the

3.0 Environmental Resources, Impacts and Mitigation

United States. Will County, once a predominantly agricultural area, is becoming increasingly urbanized, with an estimated 2010 population density of 857 persons per square mile. Population concentrations adjacent to the proposed project are found in

downtown Joliet (shown as A in Table 3-21) and in the neighborhoods directly south of the downtown (shown as B in Table 3-21). This area accounts for an estimated 87 percent of population (2,812) along the project corridor in 2010. The surrounding land use at the northern end of the project within the city limits of Joliet is a densely developed urban environment consisting of a mixture of retail and commercial uses with some industries,

public facilities, and residences. In 2010, there are an estimated 1,010 people and 317 households along the corridor in downtown Joliet.

Downtown Joliet is an older part of the City of Joliet, and some historic buildings are located in the vicinity of the project. However, the rail ROW is located on an embankment and surrounding commercial buildings are set back 100 feet or more from the railroad ROW. The East Side Historic District lies within a half-block of the existing tracks at one point. Most of the land use immediately adjacent to the rail lines consists of vacant ground, parking lots, and commercial facilities. A small neighborhood park, Osgood Park, is located nearby, and an Amtrak commuter parking lot is located to the east of the tracks. South of E. Washington Street (B in Table 3-21), the downtown area transitions to single family residential neighborhoods. In 2010, the estimated downtown population is 1,802 persons and 429 households. Since 2000, the downtown population and south Joliet neighborhoods have increased 5.3 percent or 142 people.

On the south side of Joliet from S. Chicago Street to Laraway Road (shown as C in Table 3-17), the surrounding land transitions to industrial use, including individual rock quarry operations owned by Chicago Street CCDD LLC (near MP 38.8) and Vulcan Materials (Zurich Road). This area includes lower-income residences, including a mobile-home park located on Zurich Road, but few residences are located near the train track. A new Dollar Tree distribution center and the Laraway Public School facility are located on the east side of the existing track at the Laraway Road Crossing. In 2010, the estimated population of the Area C is 229 and the number of households is 96. This area increased an estimated 3.2 percent in population between 2000 and 2010.

Further to the south the land use changes mostly to cultivated agriculture fields growing row crops, mostly corn and soybeans. There is very little open natural space in this agricultural landscape, and residences consist of farmsteads and to a lesser extent, residential properties on large acreage parcels. The southern end of the project area is within the Village of Elwood. These developments are single family homes and townhomes, generally with values of \$250,000 and more within new housing subdivisions. However, the area to the west of the railroad corridor is part of the former Joliet Arsenal and under redevelopment for the CenterPoint Intermodal Center. One of the largest private developments ever undertaken in the United States, CenterPoint encompasses 2,200 acres with a total investment approaching \$1 billion. In 2010, the estimated population of Elwood within the project area is 195 and the number households is 69. The Elwood area increased an estimated 34 people in population between 2000 and 2010. Population growth is expected to increase further as new homes are constructed in the subdivision.

Population and Households at MP 38.8, 42.6 and 44.69

Within the project corridor, there are two bridges and one large culvert where the rail line crosses waterways. These structures will be modified with the addition of a second track. Temporary easement or ROW acquisition may be required at the stream crossings of Sugar

3.0 Environmental Resources, Impacts and Mitigation

Run Creek at MP 38.8, Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. For these crossings, no existing buildings or residences would be impacted.

Structure Improvement – MP 38.8

The site is located in a historically industrial area south of downtown Joliet. The land use west of the project site is the former American Cyanamid-Cytek industries site and railroad uses. To the east, there is an inactive quarry. There are no roadways, residences or business located adjacent the site.

Structure Improvement – MP 42.6

The second structure to be widened, at MP 42.6, has no residences within 1,000 feet of the construction area. There is a small rural subdivision located .50 mile east on Millsdale Road. This site is located in Joliet jurisdictional planning area and is largely undeveloped at this time.

Structure Improvement – MP 44.4

This site is located within the Elwood jurisdictional limits. A single-family subdivision is located southeast (Meadowbrick) and northeast (Wooded Cove Estates) of the Jackson Creek Crossing at MP 44.4. One residence lies east and three residences west of the railroad ROW. These single-family houses are located on the north bank of Jackson Creek approximately 400 to 500 feet from the bridge. The surrounding area to the southeast and southwest is in transition from agricultural land to residential development. The downtown area of Elwood is located one mile south of MP 44.4.

Mazonia Siding Track between MP 55.0 and MP 57.13

The Mazonia siding project corridor is approximately two miles long and has an estimated 2010 population of 366 within the buffer along the rail between Coal City Road and East Main Street in Braidwood (Table 3-21). As of 2010, the estimated population was 6,563 in the City of Braidwood. The majority of households are located along North Washington Street in the Shadow Lakes development (west of the project corridor).

Racial/Ethnic Composition

Table 3-22 shows that minority populations in Will County are primarily concentrated within the Joliet urban area. The racial composition of population within the 2nd Mainline Track project corridor is predominantly African American, with a substantial Hispanic or Latino minority. This population is primarily located in the City of Joliet and the South Joliet Area 1 neighborhoods (Table 3-22). In general, residences in this area have backyards and/or garages adjacent to UPRR ROW. Since there is an existing second track in this area, there would be no major construction activities that would result in impacts to the neighborhoods along the project corridor in Joliet. The estimated African American

population represents 23 percent (1,823) of the population along Joliet to Dwight project corridor. The Hispanic or Latino population is approximately 18 percent (1,457).

Table 3-22. Population by Race and Ethnicity 2010 (Estimated)

Area / Corridor-Section	White	African American	Am. Indian and Alaska Native	Asian	Pacific Islander	Other	Two or More Races	Hispanic or Latino (of any race)
State of Illinois	9,332,121	1,867,843	40,280	567,972	6,312	964,565	310,633	2,106,372

Census 2010 Estimate ESRI Business Analyst Online 03/23/11 <http://bao.esri.com/>

There are no concentrations of minority populations near the three structure improvement sites at MP 38.8, 42.6 and 44.4. There are no concentrations of minority populations near Mazonia siding project corridor.

3.3.3.2 Economics and Employment

Will County is located within the Chicago metropolitan area and has a diversified economic base. The project corridor between Joliet and Dwight passes through urban, suburban and rural areas, where population, labor force and employment vary dramatically. The Joliet Elwood area is rapidly becoming part of the fringe of the Joliet area with the construction of the CenterPointe (CIC) intermodal facilities in Joliet and Elwood on the former Joliet Arsenal site. The redevelopment of this property brought together virtually all levels of government, more than a dozen public agencies, and private industry to benefit the community under a common plan. Combined, CIC-Joliet and CIC-Elwood will create the nation's largest inland port with more than 6,000 acres, multiple 1,000-acre Class I railroad intermodal yards, container/equipment management yards and more than 30 million square feet of industrial facilities. Upon build out, the project is expected to create 14,000 new jobs according to project data by CenterPointe Properties⁵.

Other industries along project corridor include a large inactive limestone quarry located west of MP 38.8 in the Joliet. Access to this site is from Chicago Street which has a north-south alignment parallel to the rail corridor. Access to the quarry would not be impacted by the extension of the culvert at MP 38.8. Presently, this quarry has limited activity.

There is a large active quarry, Vulcan Materials, located directly west of the project corridor between Zurich and Laraway Roads. Presently, there are no businesses or areas of major employment adjacent to the culvert and bridge expansion sites at MP 44.4 and 46.2.

The Prairie Creek Grain Company is located south of Elwood along IL Route 53. Prairie Creek silos and buildings are located east and west of the UPRR tracks. A private grade crossing provides truck access on the property. Prairie Creek is also a wholesale distributor of fertilizer.

The Willimington, Braidwood and Dwight economies are based on area services and manufacturing, and on the agricultural industry. The recreation economy is seasonally prominent, with thousands of visitors who enjoy camping, fishing and hunting in the region. The area is also prominent for its history and tourism related to the US Route 66 corridor which follows IL Route 53 between Joliet and Dwight. A major area employer is Exelon's nuclear power plant, situated immediately southwest of Braidwood. No industry or commercial business would be relocated by the siding improvement. Construction impacts would be limited to the temporary closing of grade crossings.

The project promotes both the short- and long-term creation and preservation of jobs while promoting new opportunities during construction of the project. Approximately \$280 million (Fiscal Year 2011 dollars) will be invested in construction and construction-related activities for the 110 mph service track and signal improvements, 2nd mainline track and Mazonia siding. New and expanded business opportunities will be indirectly created by

⁵ CenterPointe Properties, <http://www.centerpoint-prop.com>, accessed on March 25, 2011.

enhancing the capacity and increasing the fluidity of freight rail operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight.

3.3.3.3 Income and Wages

Table 3-23 shows 1999 (from Census 2000) and estimated 2010 median household incomes for areas along the project corridor. Generally, the Joliet neighborhoods have the lowest median income. In comparison, the project corridor median income is lower than the statewide, Will County, Joliet or Elwood medians.

Table 3-23. Median Household Income, 1999 (Census 2000) and 2010 (Estimated)

Area / Corridor-Section	Median Household Income		
	1999 (2000 Census)	2010 Estimated	Percent Change (1999-2010)
State of Illinois	\$46,635	\$60,254	22.6%
Will County	\$62,221	\$78,621	20.9%
City of Joliet	\$47,611	\$63,591	25.1%
Village of Elwood	\$52,995	\$65,953	19.6%
City of Wilmington	\$45,866	\$57,014	19.6%
City of Braidwood	\$52,515	\$65,466	19.8%
Village of Godley	\$41,932	\$56,061	25.2%

Mazonia Siding (1000 foot buffer)			
Mazonia Siding Buffer (MP 55.0 to 57.13)	\$48,400	\$55,068	11.6%

Census 2010 Estimate ESRI Business Analyst Online 03/23/11 <http://bao.esri.com/>

3.3.4 Environmental Justice and Title VI

Title VI of the Civil Rights Act of 1964 addresses discrimination issues associated with federally funded projects. No groups or individuals have been or will be excluded from participation in public involvement activities, denied the benefit of the project or subjected to discrimination in any way on the basis of race, color, age, sex, national origin, disability or religion.

3.0 Environmental Resources, Impacts and Mitigation

Executive Order (EO) 12898, Federal Actions to Address Environmental Justice in Minority and Low-Income Populations (EO 1994), directs federal agencies to "promote nondiscrimination in federal programs substantially affecting human health and the environment, and provide minority and low-income communities access to public information on, and an opportunity for public participation in matters relating to human health or the environment." The EO directs agencies to use existing laws to ensure that when they act:

- They do not discriminate on the basis of race, color, or national origin;
- They identify and address disproportionately high and adverse human health or environmental effects of their actions on minority and low-income communities; and
- They provide opportunities for community input during the NEPA process, including input on potential effects and mitigation measures.

EO 12898 does not define the terms "minority" or "low-income." However, guidance provided by the Council on Environmental Quality (CEQ) describes these terms in the context of an environmental justice (EJ) analysis. These definitions are unique to EJ analysis and are the basis for the methodology that follows:

- **Minority Individual** - A minority individual is classified by the US Census Bureau as belonging to one of the following groups: American Indian or Alaskan Native, Asian or Pacific Islander, Black (not of Hispanic Origin), and Hispanic.
- **Minority Populations** - According to the CEQ Guidelines, minority populations should be identified where either (a) the minority population of the affected area exceeds 50 percent or (b) the minority population percentage of the affected area is meaningfully greater than the minority population percentage in the general population or other appropriate unit of geographic analysis.
- **Low-income Population** - Low-income populations are identified where individuals have incomes below the U.S. Department of Health and Human Services poverty guidelines. A low-income population is either a group of low-income individuals living in proximity to one another or a set of individuals who share common conditions of environmental exposure or effect.
- The Health and Human Services 2011 poverty guideline for a family of four is \$22,350.

Detailed information regarding minority and low-income populations for the project corridor was compiled from 2010 estimates developed by ESRI based on US Census data.

2nd Mainline Track Project

A review of these data within a 1,000-foot buffer along the project corridor indicates a potential concentration of low income or minority populations in downtown Joliet and the neighborhoods of south Joliet. The project area at MP 38.8 and 42.6 has no population or

houses near the culvert and bridge extension sites. There are four houses within 500 feet of MP 44.4.

Mazonia Siding Track between MP 55.0 and MP 57.13

There are no concentrations of low income or minority populations along the project corridor.

Conclusions

The No-build Alternative would not have disproportionate adverse impacts on minority or low impact populations. However, the No-build Alternative would not encourage or provide increased public transportation improvements that may be of value to low-income residents who may not be able to afford reliable personal transportation to travel to employment opportunities.

The Preferred Alternative would not result in property acquisitions or relocations in the City of Joliet or other communities along the project corridor nor result in disproportionately adverse impacts to minority or low-income residents or populations. Improvements in these areas would be constructed within existing UPRR ROW between Joliet and Dwight.

3.3.5 Public Health and Safety

Specifically, this assessment considers the impact on fire, police and medical response time due to the proposed 2nd mainline track and siding track affecting cross-community access at the at-grade road rail crossings.

The 2nd mainline track corridor crosses 31 public and 7 private grade crossings as shown previously in Table 3-18. In Joliet, ten crossings are grade separated along the existing double-track section (MP 36.8 to 38.5). A crossing at Sharp Road is closed. The remaining four crossings are located in unincorporated Will County and have various forms of control, from actively protected grade crossing gates and flashing light signals to passively lights and bells-only crossing signals. The Mazonia siding track would not cross any existing grade crossings.

The No-build Alternative would not impact public health and safety. Fire, police and medical response time would not be affected as the grade-crossing signals would not be relocated for construction of a new 2nd track.

The Preferred Alternative would not have an appreciable negative impact on public health and safety by the project. Fire, police and medical response times would be temporally impacted due to construction of new double-track grade crossings at four locations. However, all construction related impacts would be temporary and considered minor. All measures would be taken during the construction phase to coordinate with emergency service providers in order to mitigate any impacts due to temporary road closures.

3.3.6 Hazardous Materials

Potential hazardous material affected sites near the project corridor were identified. Environmental Data Resources (EDR) performed an electronic search of local, state and federal environmental databases along the corridor and provided an associated report of their findings. The databases and search distances were in accordance with U.S. USEPA's All Appropriate Inquiries (AAI) regulations and American Society for Testing and Materials (ASTM) 1527-05. Numerous sites were identified along the corridor (see Appendix A). Using the information in the EDR report, the sites within critical databases that were proximate to the project corridor were identified.

Sites selected for evaluation primarily focused on those included in the EDR report in Appendix A. Although EDR's report identifies all the sites within the distances required by the All Appropriate Inquiries and ASTM standards, the evaluation was narrowed for some databases so that it focused on facilities within reduced distances that better reflect the common extent of contaminant movement associated with the likely contaminants. National Priority List (NPL) sites were identified within a 1-mile buffer of the project corridor; Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) sites were identified within 0.5 mile; and all other databases that were evaluated were identified within 500 feet of the corridor. Table 3-24 shows the number of facilities identified within each database for the 2nd mainline track Mazonia Siding, and the additional segments of the project corridor that will be constructed for high speed rail.

The EDR Report summarizes the facility name, location, and environmental databases that were evaluated for those facilities in proximity to the project corridor. Each facility has an EDR map identification number that is referenced to the attached EDR report.

3.3.6.1 Findings for the Proposed 2nd Mainline Track

The EDR report (Appendix A) detailed the presence of 20 leaking underground storage tank (LUST) sites, seven of which are located within 500 feet of the project corridor. The active LUST sites include a 1998 diesel release at the Burlington Northern & Santa Fe railyard alongside the railroad at Columbia Street in Joliet, a 1990 gasoline release at the Joliet Union Station, a used oil release at Rendel's GMC, released gasoline at the Speedway Station at 160 South Chicago Street in Joliet (approximately two blocks west of the railroad), a diesel release at the Joliet Mass Transit District facility, and released gasoline and diesel at the Joliet Township Road District, southwest of the Chicago Street / I-80 interchange. Included in the orphan summary is property at 1214 New Street, Joliet, which is a city-owned parking lot immediately west of the railroad, at which a fuel oil release was reported in 2009. Many of the LUST sites identified in the database are too far away from the corridor to have impacted either soil or groundwater.

Table 3-24. Sites Selected for Hazardous Materials Evaluation by Database

Source: EDR DataMap™ Corridor Study for 2nd Mainline Track, 4/7/2010

EDR DataMap™ Corridor Study for UPRR MP 55.0 to 57.13 (Mazonia Siding), 7/27/2010

EDR DataMap™ Environmental Atlas™ Joliet-Dwight, IL, March 17, 2011

3.0 Environmental Resources, Impacts and Mitigation

The EDR database listed 32 Underground Storage Tank (UST) facilities, of which only six were close to the railroad corridor. The database includes five gasoline tanks at the Union Station at Jefferson and Scott Streets in Joliet, and indicates that the tanks were last used in the early 1950s. Diesel, fuel oil, dry cleaning solvents and other potential contaminants are stored in the other tanks alongside the corridor.

The EDR database identifies seven facilities in Illinois EPA's Site Remediation Program (SRP). The SRP database identifies properties which are contaminated by general commercial or industrial contaminants such as solvents or heavy metals requiring remediation. These sites include the Joliet Post Office at 158 North Scott Street in Joliet, and the American Cyanamid-Cytec Industries site at 1306 McKinley Avenue in Joliet.

The EDR database identifies 41 Resource Conservation and Recovery Act (RCRA) generators. The RCRA databases also contain sites formerly classified as generators but which no longer generate or store hazardous waste. Most are small quantity generators in Joliet; however, other facilities that generate hazardous waste exist along much of the route. The listing of a site as a small quantity hazardous waste generator alone does not suggest that contamination is present.

One facility, the "ESL Incorporated" at the intersection of West Laraway Road and South Patterson Road in Elwood, is classified as a TSD (Treatment, Storage, and Disposal Facility) and large quantity generator. The location of the facility was ascertained, and found to be approximately 7,500 feet from the railroad corridor.

Two manufactured gas plants were identified in the EDR report, however, both plants are located on the west side of the river, thus contaminants from these sites are unlikely to have migrated into the corridor.

EDR identified one dry cleaner, Ajax Cleaners (also known as "Oriental Cleaners"), through its database search. The location of the dry cleaner appears to be approximately 300 feet west of the railroad corridor. The Des Plaines River is dammed south of Joliet, and throughout the center of the city the river is constrained by dikes. PB expects that groundwater in shallow aquifers within central Joliet is mounded, and that groundwater flows away from the river. Accordingly, Ajax Cleaners is likely upgradient of the HSR corridor. The chemicals commonly used at dry cleaners, tetrachloroethylene and trichloroethylene, have high mobility in soil and groundwater, thus the migration of these substances below the corridor is likely.

Two CERCLIS sites were identified in the database: the American Cyanamid-Cytec Industries facility, which is directly west of the railroad corridor at the south edge of Joliet, and the Matheson Gas Products facility, also south of Joliet, but approximately 3,600 feet east of the corridor. The Cytec facility is no longer in operation. In 2007, the Illinois Department of Public Health (IDPH) evaluated the potential risks to the public posed by

known contamination in soil, groundwater and sediments on the Cytec facility and in the surrounding area. The Illinois Department of Public Health (IDPH) concluded:

*"Currently the American Cyanamid-Cytec Industries site poses no apparent public health hazard. Limited data do not suggest that people near the site are being exposed to site-related contaminants at levels that would cause adverse health effects. Levels of chemicals in on site soil are not at levels that would be expected to cause adverse health effects. Exposure to chemicals in private wells and on- and off-site surface soil would not pose a health hazard. Exposure to contaminated sediments or surface water probably would be occasional, resulting in negligible exposure."*⁶

The northern portion of the project corridor passes through industrial, commercial, residential, and suburban areas of Joliet, Illinois. The areas adjacent to the existing railroad tracks generally include roadways, parking lots, and residential yards.

The southern portion of the project passes through agricultural areas. Properties adjacent to the tracks are for the most part undeveloped. Vegetation along the tracks and adjacent properties did not appear stressed.

Findings for Culvert MP 38.8

At mile marker 38.8, the railroad passes over Sugar Run Creek. Sugar Run Creek begins several miles east of the culvert, and flows through and alongside several residential, commercial and light industrial areas. Approximately 1,500 feet upstream of the culvert below the railroad bed, the creek is confined to a channel that diverts it around a large open-pit limestone mine. Mine dewatering pumps discharge water from the pit into Sugar Run Creek, approximately 100 feet upstream of the culvert.

Northwest of the culvert is a pond used by the Illinois Central Gulf Railroad to hold and remove oil from runoff water. The EDR report identifies this pond as a permitted industrial impoundment structure. Current Will County Assessor records show that this property is now owned by the Illinois Department of Transportation, District 1.

Approximately 1,400 feet southwest of the culvert is the American Cyanamid-Cytec facility, a former chemical manufacturing company that is included on the USEPA's CERCLIS (Superfund) list. In 2007, the IDPH evaluated the potential risks to the public posed by known contamination in soil, groundwater and sediments on the facility and in the surrounding area (see above section).

The presence of the open-pit limestone mine is expected to significantly control deep groundwater movement. A confining layer appears to exist in the area of the culvert which

⁶ Illinois Department of Public Health, Health Consultation American Cyanamid-Cytec Industries Joliet, Will County Illinois EPA Facility ID: ILD000675264, October 16, 2007

3.0 Environmental Resources, Impacts and Mitigation

prevents water in the creek from draining to deeper water-bearing zones. This same confining layer would also help prevent the vertical movement of any contaminants that might be present. Based on the anticipated direction of groundwater flow and the contaminants that could be present on surrounding properties, the potential that contaminated materials will be found in the area of the culvert is small.

Findings for Bridge MP 42.6

The railroad crosses Cedar Creek at MP 42.6, approximately 420 feet south of West Millsdale Road in Elwood. Cedar Creek is shown on U.S. Geological Survey (USGS) maps as beginning only about one mile east of the crossing in rural farmland south of a relatively new subdivision. At the crossing, the USGS mapped the stream as being intermittent. Although the ESL Corporation property, a Superfund facility, is shown in the EDR report as being in close proximity to the crossing, further research including contact made with Waste Management, the successor owner of ESL, showed that the ESL facility was incorrectly mapped and is actually three miles north-northwest at the intersection of West Laraway Road and South Patterson Road in Elwood.

Findings for Bridge MP 44.4

At mile marker 44.4, the railroad crosses Jackson Creek, which begins several miles east of the culvert, and flows through agricultural fields and scattered rural residential subdivisions. The EDR report does not identify any likely sources for contamination upstream or near the bridge.

3.3.6.2 Findings for the Mazonia Siding Track

Table 3-24 above shows the number of facilities identified within each relevant database from the Mazonia Siding track project in Braidwood, Illinois. The EDR database report identified two IL NIPC sites approximately one-half mile northwest of the proposed siding track near the intersection of Novy and Cemak Roads. NIPC is an inventory of active and inactive solid waste disposal sites. The two NIPC sites are likely the same facility and essentially no information regarding these sites is provided in the EDR report. Four LUST sites were identified near the southern end of the proposed siding track, in the vicinity of State Highway 53 (Front Street) and State Highway 113 (Main Street). The former *Bergman's Bait and Pet Shop* at 108 N. Front Street, near the southern end of the proposed siding track, was listed in several databases in the EDR report including SPILLS, ENG CONTROLS, INST CONTROLS, SRP, and BROWNFIELDS. Based on the findings in the EDR report, the City of Braidwood obtained a grant under the brownfield program to conduct corrective action at the site. The property has a land use restriction, groundwater use restriction, and must maintain an asphalt pavement barrier to restrict exposure to subsurface contaminants. This indicates that residual soil and groundwater contamination remains at the site. The IEPA issued a No Further Action/ Remediation (NFA/NFR) letter in March 2006 indicating that no further corrective action is necessary.

3.3.6.3 Potential Effects

2nd Mainline Track Project between MP 36.7 and MP 44.69

The addition of a second track to the railroad right-of-way, which would include construction of new crossings over Sugar Run Creek, Cedar Creek and Jackson Creek, would not be expected to introduce new contaminants to the environment.

Mazonia Siding Track between MP 55.0 and MP 57.31

The addition of a siding track in the railroad ROW, would not be expected to introduce new contaminants to the environment.

Furthermore, if contaminants do exist in soil or groundwater along the corridor or on other properties, no change in the movement of contaminants would be expected. The project would not affect nor be affected by hazardous materials; however, wastes from unknown sites could be found and may need to be addressed in accordance with Federal and State laws and regulations.

If regulated solid or hazardous wastes are found unexpectedly during construction activities, work will cease at the suspect site and the construction inspector will contact the appropriate environmental agencies. The environmental agency, UPRR, and the contractor will develop a plan for sampling, remediation if necessary, and continuing project construction.

3.3.6.4 Findings for the 110mph Service

The EDR report (Appendix A) detailed the presence of 29 LUST sites, six of which are located within 500 feet of the project corridor (between MP 44.69 to MP 55.0 and MP 57.31 to MP 72.91). The Phibro-Tech and United State Cold Storage facility in Wilmington, which border the east side of the railroad are open LUST sites.

Two LUST locations are situated at the south end of the 110 mph Service area as it passes through Wilmington, and near to the planned Mazonia Siding. One of these locations is a Circle K gas station. The second location is poorly identified, but may be a motor oil change facility.

The EDR database identifies three facilities in the Site Remediation Program (IEPA's SRP). The SRP database identifies properties which are contaminated by general commercial or industrial contaminants such as solvents or heavy metals requiring remediation. These sites include the Wilmington Cleaners property in Wilmington.

To supplement the information in the EDR Report, PB viewed current and historic aerial photographs of the area around Gardner, which are available through Google Earth Pro. These aerial photographs show that one historic and three current gas stations are located within approximately 250 feet of the Main Street railroad crossing in Gardner, but only two of them are identified in the LUST list. "No Further Action" letters have been issued for

3.0 Environmental Resources, Impacts and Mitigation

these two stations. Additional LUST sites identified in the database are believed to be too far away from the corridor to have impacted either soil or groundwater.

3.3.7 Cultural Resources

This section provides an evaluation of historic architectural and archeological resources within UPRR ROW.

3.3.7.1 Existing Conditions

Regulatory Environment

Section 106 of the National Historic Preservation Act

Section 106 of the National Historic Preservation Act (NHPA) of 1966 (as amended) requires federal agencies to consider the impacts of their project undertakings on historic architectural and archeological resources that are either listed in or have been determined eligible for listing in the National Register of Historic Places (NRHP) (36 CFR 800). If projects are federally permitted, licensed, funded, or partially funded, the project must comply with Section 106. Under Section 106, federal agencies are required to provide the public with information about a proposed project and its effect on historic properties and to seek public comment and input, except where confidentiality is considered necessary (as specified in 36 CFR Parts 800.2 and 800.3).

Tribal Consultation

The 1992 amendments to the NHPA require all federal agencies to consult with Indian Tribes or Native Hawaiian organizations for undertakings that may affect properties of traditional religious and cultural significance. Section 36 CFR 800.2(c) (2)(ii)(A) states that "the agency official shall ensure that consultation in the Section 106 process provides the Indian Tribe or Native Hawaiian organization a reasonable opportunity to identify its concerns about historic properties, including those of traditional religious and cultural importance, articulate its views on the undertaking's effects on such properties, and participate in the resolution of adverse effects."

The current version of the regulations implementing Section 106 of the NHPA, effective August 5, 2004, reflects this approach and requires federal agencies to consult with any tribe that may attach religious and cultural significance to resources affected by an agency action, whether those resources are on or off tribal lands.

Illinois does not have resident federally recognized tribes, but there are non-resident tribal groups who have formally declared that they consider specific portions of Illinois to have cultural or historic significance to their group. The 1992 NHPA amendments and subsequent revisions to the regulations by the ACHP incorporate provisions which stipulate that federal agencies, including the FRA, must consult with Federally-recognized American Indian tribes that attach religious and cultural significance to historic properties that may be affected by an undertaking. A Project Notification System (PNS) has been developed and employed by the IDOT, the Illinois SHPO, and the USDOT (with FHWA the lead agency) to

coordinate transportation projects with tribes that have expressed an interest in Illinois. Through the electronic PNS, the tribes contacted are listed in Table 3-25..

Table 3-25. Tribal Groups with an Interest in Will, Grundy and Livingston County, Illinois

Tribe	Contacted
Potawatomi	Yes
Ho Chunk	Yes
Sauk	Yes
Fox	Yes
Kickapoo	Yes
Miami	Yes

Potential Impacts

During the current phase of the project, a review of project data by the IDOT Cultural Resources Unit lead to a determination that no historic properties will be affected by the proposed construction. The Illinois SHPO reviewed this finding and concurred (March 30, 2011), see Appendix B, page B-1 and B-102.

3.4 Construction Impacts

Impacts associated with construction of the improvements would be local and temporary. The most noticeable impacts would likely be noise, vibration, dust, and traffic disruptions. There is also the potential for impacts to streams and wetlands.

These temporary impacts would occur from operation of equipment for installation of additional track, rehabilitation of existing track, and upgrade/installation of bridges and signal devices. Normal traffic may be flagged at various times to allow entry and exit of construction equipment to the project sites via nearby rail/highway grade crossings. Such occurrences are expected to be perceived by motorists as an inconvenience. However, these impacts would be temporary, and existing vehicular travel would be restored after construction has been completed at each site.

The project may require periodic reduction in the operating speed of trains that pass through construction zones. Also, there may be a need to adjust the schedule of rail operations if activities require temporary shutdown of selected track sections. Such schedule and/or operations adjustments would be necessary when there is a potential safety risk due to the proximity of moving trains and construction activities that are incompatible with ongoing train traffic. Such delays or disruptions may be similar to normal maintenance activities under existing conditions.

As with any construction project, an increase in noise is expected at construction sites. However, construction activity would generally occur on weekdays between the hours of 7:00 a.m. and 6:00 p.m. and so would not interfere with normal activities of persons who

3.0 Environmental Resources, Impacts and Mitigation

may live or work nearby. Construction noise would be reduced to the extent feasible by including specific noise control requirements in the construction contract specifications. The specifications should require contractors to: 1) select the equipment and techniques that generate the lowest noise levels; 2) use equipment with effective mufflers; 3) certify compliance with noise monitoring; 4) select haul routes that minimize truck noise in residential areas; and 5) select air compressors that meet federal noise level standards and locate them away from or shield them from residences and other sensitive noise receptors.

Vibration during construction is generally limited to annoyance effects and not to building damage effects. Vibration impacts could be mitigated by restricting the procedures and time permitted for vibration-intensive activities, such as pile-driving and by requiring vibration monitoring to certify compliance with vibration limits. In addition, an active community liaison program could be implemented to ensure residents are kept informed of construction activities and have a means to register complaints.

For the more vibration-intensive activities, care would be taken to prevent vibration damage to adjacent structures. In areas where vibration is anticipated, surveys could be conducted before construction begins to aid in documenting damage that may occur as a result of construction.

Construction could temporarily impact floodplains, wetlands, streams, and surrounding stream banks. Track improvements would involve replacement of some rail, crossties and track ballast, plus other improvements to trackside equipment. These procedures are primarily restricted to the current right-of-way. Where a new second track is added, extension of culvert or bridge structures are required, with temporary construction impacts where new bridge structures are installed. New track installation would also require subgrade preparation and earthwork.

These potential impacts would be minimized, however, as the contractor would be required to avoid wetlands during the establishment of construction staging areas and other construction activities. In addition, erosion, sedimentation and bank stabilization measures would be employed where construction occurs at or near creeks or creek crossings, consistent with the IDOT Bureau of Design and Environment Manual, and IDOT's Standard Specification for Road and Bridge Construction, January 1, 2007.

3.5 Secondary and Cumulative Impacts

3.5.1 Secondary Impacts

Secondary (indirect) impacts are defined as reasonably foreseeable future consequences to the environment that are caused by the proposed action, but that would occur either in the future (later in time) or near, but not in the same location as, direct impacts associated with implementation of a build alternative. Under the CEQ regulations, indirect impacts are defined as those that are "... caused by the action and are later in time or farther removed in distance but are still reasonably foreseeable. Indirect effects would include growth-

inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate, and related effects on air and water and other natural systems, including ecosystem" (40 CFR 1508.8b).

Indirect impacts can be associated with the consequences of land use change and development that would be indirectly supported by changes in local access or mobility. Indirect impacts differ from those directly associated with the construction and operation of a project itself and are often caused by what is commonly referred to as "induced development." Induced development would include a variety of alterations such as changes in land use, economic vitality, property values and/or population density. The potential for secondary impacts to occur is determined in part by local land-use and development-planning objectives and the physical location of a proposed action.

With the No Build Alternative, the existing rail service along the project corridor would continue. Over time, a potential indirect effect could be to bring additional attention to a need for improvements to rail service along the corridor to accommodate additional rail traffic.

The Preferred Alternative would result in indirect impacts as the improved operability of rail traffic could result in further development along the corridor. Local review boards would be responsible for investigating the impacts to water, sewer, traffic and other environmental factors from future development. The 2nd mainline track project area is already planned for future industrial development as part of the redevelopment of the Joliet Arsenal in Elwood. The area surrounding the Mazonia siding project corridor is designated private recreational development and unlikely to change to commercial or industrial uses. Other areas of the Joliet to Dwight corridor are located in rural agricultural areas and approximately 4.0 miles cross the MNTP (formerly Joliet Arsenal) between Elwood and Wilmington and runs parallel to IL Route 53. No additional stations are planned between Joliet and Dwight.

3.5.2 Cumulative Impacts

The consideration of cumulative effects consists of an assessment of the total effect on a resource, ecosystem, or community from past, present, and future actions that have altered the quantity, quality, or context of those resources within a broad geographic scope. Under the CEQ regulations, cumulative effects are defined as "...the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or nonfederal) or person undertakes such other actions." Cumulative effects can result from individually minor but collectively significant actions taking place over a period of time" (40 CFR 1508.7). The cumulative effects analysis considers the aggregate effects of direct and indirect impacts – from federal, non-federal, public, or private actions – on the quality or quantity of a resource.

3.0 Environmental Resources, Impacts and Mitigation

The intent of a cumulative-effects analysis is to determine the magnitude and significance of cumulative effects, both beneficial and adverse, and to determine the contribution of the proposed action to those aggregate effects. Contributions to cumulative effects associated with the Preferred Alternative on the resources analyzed would be limited to those derived from the direct and secondary impacts of the action.

The No Build Alternative would have a slight negative contribution to cumulative impacts. The No Build Alternative would not provide any benefits to regional air quality because it would continue the existing recognized rail “choke point” between Joliet and Braceville.

The Preferred Alternative would have slight beneficial contributions to cumulative impacts. The proposed improved operability of freight and passenger rail service is expected to provide an overall benefit to air quality. The improvements are expected to significantly reduce train idling and provide faster Amtrak service to motorists who would otherwise travel between Chicago and St. Louis by motor vehicle. The improvements to the grade crossing treatments will benefit the safety of motorists crossing the railroad.

3.6 Permits

3.6.1 Applicable Regulations and Permits

- Section 404 of the Clean Water Act from the USACE.

Section 404 of the Federal Clean Water Act regulates the discharge of dredged or fill materials into waters of the U.S., including wetlands. The introduction of fill or other materials (other than pre-cast structures) below the ordinary high water line of surface waters such as rivers, streams, ponds, wetlands, or unavoidable filling of wetlands would require a Section 404 permit.

- Section 401 of the Clean Water Act Water Quality certification from the Illinois Environmental Protection Agency.

States are granted authority to review activities in waterways and wetlands and to issue water quality certifications under Section 401. The Illinois Environmental Protection Agency (IEPA) issues a Section 401 Water Quality certification for all activities requiring a dredge and fill permit. Under the state’s antidegradation policy, individual water quality certifications would be subject to public review. A Section 401 permit is mandatory for all projects requiring a Section 404 permit.

- Section 402 of the Clean Water Act National Pollutant Discharge Elimination System (NPDES) Construction Permit from the IEPA.

Because the proposed project would potentially disturb 0.4 hectares (1 acre), it would be subject to the requirement for an NPDES permit for stormwater discharges from the construction site(s). Permit coverage would be obtained under the IEPA General Permit for Stormwater Discharges from Construction Site Activities (NPDES Permit No. ILR10).

A Stormwater Pollution Prevention Plan would be prepared and implemented, in accordance with requirements under the NPDES permit(s).

- Construction in Floodways of Rivers, Lakes, and Streams from the Illinois Department of Natural Resources (IDNR), Office of Water Resources.

The IDNR Office of Water Resources issues permits for work within regulatory floodways or public waters, and for the crossing of streams with more than 259 hectares (640 acres) of drainage area.

- Section 7 of the Endangered Species Act of 1973.

If endangered species are identified during the project, all activity in the immediate area would cease. Coordination with the U.S. Fish and Wildlife Service would be initiated as required by Section 7, and appropriate state or federal permits would be sought.

The IDNR issues permits for incidental takes of state-listed threatened or endangered species.

- Air Permits.

To control local air pollution impacts, a permit may be required for portable bituminous and concrete plants used in project construction.

- IDOT Requirements.

Prior to construction, erosion control fencing would be placed at the limits of construction. Zones of fill, grading, compaction, or equipment movement would be restricted to areas outside the protective fencing. Impacts from silt and sedimentation would be minimized through adherence to erosion control measures outlined in IDOT's Standard Specification's for Road and Bridge Construction, January 1, 2007.

- Executive Order 11988, Floodplain Management (42 Federal Register [FR 26951])
- Executive Order 11990, Protection of Wetland (42 FR 26961)
- Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (59 FR 7629)
- Executive Order 13166, Improving Access to Services for Persons with Limited English Proficiency (65 FR 50121)
- Federal Railroad Administration Procedures for Considering Environmental Impacts (64 FR 28545 and 49 CFR Part 260.35)
- National Environmental Policy Act of 1969 (42 USC § 4321 et seq., signed January 1, 1970)
- Regulations for Implementing the Procedural Provisions of the National Environmental Policy Act (40 CFR 1500–1508)

3.0 Environmental Resources, Impacts and Mitigation

- Section 4(f) of the U.S. Department of Transportation Act of 1966 (49 USC § 303)
- Section 6(f) of the Land and Water Conservation Act of 1965 (16 USC § 460)
- Sections 9 and 10 of the Rivers and Harbors Act of 1899 (33 USC § 401)
- Section 106 of the National Historic Preservation Act, as amended (16 USC § 470)
- Section 404 of the Federal Water Pollution Control Act (33 USC § 1344)
- Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (42 USC § 61)
- Use of Locomotive Horns at Highway-Rail Grade Crossings, Final Rule (40 CFR 222 and 229)

Chapter 4

Coordination and Consultation

4.0 COORDINATION AND CONSULTATION

Public involvement is an important part of any IDOT project planning process. In addition to working with the requisite federal and state agencies, IDOT efforts for this Environmental Assessment included outreach to a wide variety of stakeholders along the project corridor.

4.1 Meetings

To assist with coordination, two outreach meetings have been held with various stakeholders. The first stakeholder public outreach meeting for the project was held on May 12th, 2010 at the City of Joliet, City Hall to review the 2nd mainline Track EA and a proposed Categorical Exclusion (CE) for the Mazonia Siding Project in Braceville. After the meeting on May 12th, it was determined to include the CE in the EA document. See Appendix B for meeting minutes and comments.

As result of stakeholder comments regarding the location for the Mazonia Siding, an alternative location was determined by the UPRR in July 2010. Discussion with IDOT and FRA determined that the new location should be reviewed as a project component of the EA document.

A second stakeholder outreach meeting was held on March 24th, 2011 to review the upgrade of track from Joliet to Dwight for 110 mile per hour service, as well as the new Mazonia Siding location and the addition of a second mainline track from Joliet to Elwood. This meeting built upon the information provided at the first stakeholder meeting; it also included all of the additional infrastructure requirements to complete the installation of the new 110 mile per hour track.

Additional stakeholder outreach meetings will be scheduled to receive public comments on the Joliet to Dwight Track Improvement options. These meetings will be held pending the final location of the siding track and other issues affecting the decision regarding this project.

4.2 Coordination Letters

Agency coordination is a necessary and crucial component of project development. Agency coordination in this project included working with a wide variety of agencies, including lead, participating, consulting and potentially affected agencies.

4.3 Agencies

The agencies that were engaged in the Environmental Assessment are listed in Chapter 6.0. Letters sent to agencies are shown in Appendix B. Includes letters sent in July 2010 for the 2nd mainline track EA and the Mazonia Siding CE, and letters sent in March 2011 for this EA. All agencies were given the option to review the EA to provide comments. After all comments have been received from the agencies, additional coordination may be necessary

4.0 Coordination and Consultation

to address issues or concerns with the project. All coordination will be conducted in accordance of FRA procedures.

4.3.1 Letters and Other Contacts

Letters were sent to the agencies informing them of the EA, detailing the history of the project, the project scope, asking for information to complete the EA and any comments the agency representative may have had.

4.3.2 Native American Tribal Consultation

The 1992 National Historic Preservation Act amendments and subsequent revisions to the regulations by the ACHP incorporate provisions which stipulate that federal agencies, including the FRA, must consult with Federally-recognized American Indian tribes that attach religious and cultural significance to historic properties that may be affected by an undertaking. A PNS has been developed and employed by the IDOT, the SHPO, and the USDOT (with FHWA) the lead agency) to coordinate transportation projects with tribes that have expressed an interest in Illinois (there are no tribal lands or resident tribes within Illinois). Through the electronic PNS, the following tribes have been notified concerning the project: Miami, Ho Chunk, Potawatomi, Kickapoo, and the Sauk & Fox.

4.3.3 State Historic Preservation Office (SHPO) Consultation

The SHPO was contacted for this project. A letter of concurrence is included in Appendix B. Includes SHPO concurrence for the 2nd mainline track EA and the Mazonia Siding CE, and SHPO concurrence for this EA. Additional coordination with the SHPO will take place, pending approval of this project.

4.3.4 Illinois Department of Natural Resources (IDNR) Consultation

The IDNR was contacted for this project by using the EcoCAT. The results of the EcoCAT are included in Appendix B. Includes EcoCAT for the 2nd mainline track and the Mazonia Siding from EA prepared in April 2010. A letter from the IDNR terminating consultation under 17 Illinois Administrative Code Part 1075 is shown in Appendix B for the EA prepared in April 2010. Also, included in Appendix B is an EcoCAT for this EA. Additional coordination with the IDNR will take place, pending approval of this project.

Chapter 5

Distribution List

5.0 DISTRIBUTION LIST

5.1 Agency Coordination

5.1.1 Federal Agencies

Advisory Council on Historic Preservation
Federal Emergency Management Agency
Federal Highway Administration, Illinois Division
Federal Transit Administration, Region 5
National Park Service
U.S. Army Corps of Engineers, Chicago District
U.S. Coast Guard, Ninth District
U.S. Department of Agriculture
U.S. Department of Agriculture, Forest Service, Eastern Region - R9
U.S. Department of Housing and Urban Development
U.S. Department of the Interior, Fish & Wildlife, Chicago Field Office
U.S. Department of the Interior, Office of Environmental Policy and Compliance
U.S. Environmental Protection Agency, Region 5
U.S. Senator Richard Durbin
U.S. Senator Roland Burris
U.S. Representative, Debbie Halvorsen, District No. 11

5.1.2 State Agencies

Illinois Commerce Commission
Illinois Department of Agriculture
Illinois Department of Commerce and Economic Opportunity
Illinois Department of Natural Resources
Illinois Department of Public Health
Illinois Environmental Protection Agency
Illinois Geological Survey
Illinois Historic Preservation Agency
Illinois Natural History Survey
Illinois Nature Preserves Commission
Illinois State Library
Illinois State Water Survey

5.1.3 Other Agencies and Commissions

Chicago Metropolitan Agency for Planning
Regional Transportation Authority

5.0 Distribution List

5.1.4 Counties

Grundy
Livingston
Will

5.1.5 Local Communities and Jurisdictions

Braceville
Braidwood
Dwight
Dwight Township
Gardner
Godley
Goodfarm Township
Elwood
Jackson Township
Joliet
Wilmington

5.1.6 Other Organizations

Center for Neighborhood Technology
Environmental Law and Policy Center
Exelon Corporation (Braidwood Nuclear Generating Station)
Illinois Farm Bureau
National Trust for Historic Preservation (Gaylord Building)
South Suburban Mayors & Managers Association
United Counties Council of Illinois
Will County Governmental League

5.1.7 Railroads

Amtrak
Canadian National Railway
Union Pacific Railroad Company

Environmental Data Resources (EDR) DataMap Environmental Atlas

Summary: Environmental Data Resources (EDR) performed an electronic search of local, state and federal environmental databases along the corridor and provided an associated report of their findings. The databases and search distances were in accordance with USEPA's All Appropriate Inquiries (AAI) regulations and American Society for Testing and Materials (ASTM) 1527-05. Numerous sites were identified along the corridor. Using the information in the EDR report, the sites within critical databases that were proximate to the project corridor were identified.

EDR Reports contains over 1,000 pages of search results. This data is available upon request since the grantsolutions.gov website did not accept the EDR files during upload of this application.

FEDERAL 106 PROJECT

NO HISTORIC PROPERTIES AFFECTED

Ms. Anne Haaker
Deputy State Historic Preservation Officer
Illinois Historic Preservation Agency
Springfield, Illinois 62701

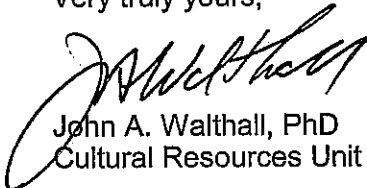

Dear Ms. Haaker:

Attached is an Environmental Survey Request form and location map for the above referenced project addendum. All work for this addendum will be completed within the existing disturbed right-of-way or in adjacent temporary easements in disturbed areas. This project addendum does not involve bridge work. No historic properties will be impacted.

This project addendum covers an extension of planned improvements previously reviewed and cleared by your office for cultural resources. (See attached concurrence letters dated April 28, 2010 for Sequence #15866 and #15892.)

In accordance with the established procedure for coordination of Illinois Department of Transportation projects, we request the concurrence of the State Historic Preservation Officer in our determination that no historic properties subject to protection under Section 106 of the National Historic Preservation Act of 1966, as amended, will be affected by the proposed construction activities.

Very truly yours,

John A. Walthall, PhD
Cultural Resources Unit

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Betker:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Ms. Bishop:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis

Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mayor Cook:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Duffy:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Evans:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mayor Grygiel:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Haars:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis

Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Hamer:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Isoe:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

To whom it may concern:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Johnson:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Rear Admiral Neffenger:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Nelson:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Odeen:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Ms. Odeshoo:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mayor Offerman:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Ms. Pollack:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Roeder:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Ms. Savko:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Scott:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Ms. Simon:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Spang:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Stead:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Taylor:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis

Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Thanas:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Walsh:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Westlake:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mayor Wilkey:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a

Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mr. Winters:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost 72.81), Illinois

Dear Mayor Wise:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will allow the extension of the passenger rail operations at speeds of up to 110 mph speed. The extended area will include approximately 36 miles from Joliet, IL to Dwight, IL in a southeast direction across Will County, Grundy County and northeastern Livingston County. The action proposed consists of three components located within UPRR's Joliet Subdivision. For the first component, the existing track will be upgraded for speeds of up to 110 mile per hour from Mile Post (MP) 36.7 in the City of Joliet, IL to MP 72.81 in Dwight, IL. The second project component includes the addition of a second mainline track, located between UPRR Milepost (MP) 36.80 in the City of Joliet, Illinois, and MP 44.60, north of Elwood, Illinois. The third component includes a new siding track, located between UPRR MP 55.00 and MP 57.31 located in Braidwood, Will County, IL. A NEPA document was already prepared for the second and third components described above and you received a letter dated April 30, 2010 to describe these projects. The first component was recently added to the NEPA document.

Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the section between Joliet and Dwight. This project will result in an increase in train speeds and will not increase service levels. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (two of which are long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

Note that this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision (ROD) on the Chicago-St. Louis Corridor. In January 2003, the IDOT completed an Environmental Impact Statement (EIS) for the Chicago - St. Louis corridor. The Preferred Alternative from the 2003 FEIS and resulting 2004 ROD included the provision of high-speed rail service, operating at 110 miles per hour (mph), along the existing Chicago - St. Louis Amtrak route south of Dwight, Illinois. On February 14, 2011, a Notice of Intent was issued to prepare a Tier 1 Environmental Impact Statement for the Chicago to St. Louis corridor, which is funded under FRA's

HSIPR program. Based on the Notice of Intent, alternatives will now be considered from Joliet to Chicago and any alternatives from Dwight to Chicago have been eliminated.

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that these physical plant improvements would allow a further 10% increase in passenger train on-time performance. However, this work would not lead to increased freight speeds and freight trains would continue to operate at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits and includes the three project components for proposed improvements. For all three components, the majority of the work for the will occur within UPRR's right-of-way (ROW). However, temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east, replacement of the one track bridge at MP 44.4 with a double track bridge, and extension. Temporary easements or ROW acquisition may also be required at the curve located in Elwood. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by March 31, 2011.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on April 4th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov. Please include "Joliet to Dwight EA comment" in your subject line when sending an email.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Subject: IL HSR Joliet to Dwight Environmental Assessment - REQUEST FOR COMMENTS

Hello Miriam,

I received your submission on the HSR proposal. Federal Executive Order (E.O.) 11988 directs federal agencies to avoid short and long term impacts associated with modification and occupancy of the floodplain, unless there are no practicable alternatives. The E.O. establishes a specific decision making process to achieve compliance. It is the individual responsibility of each federal agency to ensure their compliance with E.O. 11988; FEMA is not a regulatory agency. Should the Federal funder of your project require technical assistance in the implementation of their agency's E.O. 11988 requirements, please contact me directly.

Thanks

Amanda Ratliff

RE: Illinois High Speed Rail Initiatives

Dear Secretary Hannig:

The Regional Transportation Authority supports IDOT's efforts to improve Midwest mobility through the High Speed Rail initiatives. These programs will have a particular benefit to the Chicago region by creating more efficient access with other economic centers and populations.

Chicago's existing regional transit system and infrastructure is an important asset for the success of the Midwest rail corridors and I would like to offer the RTA's assistance as a participant in these study efforts. The current Tier I EIS for the Chicago-St. Louis corridor includes the Joliet to Chicago segment that serves one of the fastest growing segments of RTA's six-county region. This project in particular offers opportunities to align our mutual goals and coordinate our strategic planning efforts.

Please contact Leanne Redden, Senior Deputy Executive Director, Planning with regards to these initiatives. Leanne can be reached at ReddenL@rtachicago.org or (312) 913-3221.

Thank you in advance for your assistance.

Sincerely,

Joseph G. Costello

**RE: Environmental Assessment – Union Pacific Railroad's Joliet Subdivision
Improvements from Joliet to Dwight - Comments**

Dear Mr. Weber:

The City of Joliet welcomes the opportunity to provide comments as part of the Environmental Assessment (EA) for the proposed Union Pacific Railroad (UPRR) Dwight-Joliet Improvement Project. The capacity and operational improvements that will result from the proposed UPRR Dwight-Joliet Improvement Project will enhance coordination between freight and passenger rail traffic and accommodate future High Speed Rail service. Freight intermodal growth and planned rail passenger service improvements underscores the need for the proposed UPRR Dwight-Joliet Improvement Project.

Joliet is a major stop along the Chicago to St. Louis rail corridor and continues to serve as a gateway to rail service in the Southwest Chicago Region. The City of Joliet is working with IDOT, Burlington Northern Santa Fe Railroad (BNSF), UPRR, Amtrak, Metra, Pace, Regional Transportation Authority (RTA), and others to develop a new Multi-Modal Regional Transportation Center (MRTC) at Joliet Union Station. The proposed UPRR Dwight-Joliet Improvement Project will leverage the planned \$40 million MRTC transportation investment.

It is our understanding that impacts will be mitigated by increased passenger rail on-time performance, freight train speeds that would continue to operate at the current 60 mph, and the majority of the work as well as construction staging areas confined within in the UPRR right-of-way (ROW). We look forward to working with you and your staff throughout the UPRR Dwight-Joliet Improvement Project. Should you have any questions regarding this matter, please contact me at 724-3720.

Sincerely,

Thomas A. Thanas

Re: Environmental Assessment
Union Pacific Railroad's Joliet Subdivision Improvements
from Joliet (Milepost 36.7) to Dwight (Milepost), Illinois

Dear Mr. Weber:

The Illinois Department of Agriculture (IDA) is in receipt of your March 18, 2011 letter stating that the IDOT is initiating the information gathering phase of the National Environmental Policy Act (NEPA) process for the proposed improvements included in the Union Pacific Railroad (UPRR) Joliet to Dwight Improvement Project.

As previously stated in correspondence to the IDOT over the past decade regarding high speed rail service in Illinois, IDA's primary concern is for the safety of the farmers when accessing their fields. We also have concern over the possible use of agricultural land for the project. The IDA has no further comments to offer at this time.

The Department requests to receive a printed copy of the draft Environmental Assessment for our upcoming review. Please continue to coordinate with Terry Savko of my staff.

Sincerely,

A handwritten signature in cursive script, reading "Steven D. Chard".

Steven D. Chard, Acting Chief
Bureau of Land and Water Resources

RECEIVED
MAR 24 2011

Illinois Dept. of Transportation
Division of Public and
Intermodal Transportation

Dear Mr. Weber:

This in response to your letter dated March 18, 2011, with which you provided information regarding a proposed rail improvement project along the Union Pacific Railroad Company's (UP) Joliet Subdivision, located between Joliet, Will County (railroad milepost 36.7) and Dwight, Grundy County (railroad milepost 72.81). With the letter you provided this office with an opportunity to provide comments for the Illinois Department of Transportation's (IDOT) information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements.

It is my understating that the proposed project includes the following components: 1) track upgrades to permit train speeds up to 110 mph between railroad mileposts 36.7 and 72.81; 2) the addition of a second mainline track between railroad mileposts 36.8 and 44.6; and, (3) construction of a new siding track between railroad mileposts 55.0 and 57.31. With letters dated May 13, 2010, this office previously submitted comments on the latter two components of the proposed project. Even though this office has previously submitted comments for the second mainline track and siding track components of the proposed project, the comments noted below should be considered for all 3 components of the project.

Following a review of the information you provided, as well as our files, Staff of the Illinois Commerce Commission (Staff) recommends the following:

- (1) To accommodate the installation of second mainline track, and where maximum train speeds of 110 mph or less are proposed, four-quadrant gates that include a presence/intrusion detection system that is integrated with Positive Train Control (PTC) or Cab Signal system should be installed at all public highway-rail grade crossings and all private highway-rail grade crossings with public roadway attributes.
- (2) Indentify and pursue efforts to close existing public and private highway-rail and pedestrian-rail grade crossings that are either redundant, unnecessary or where

safety improvements cannot reasonably be performed, due to complex crossing geometry or close proximity of highway intersections.

- (3) Evaluate the limits for restricting access along the railroad right-of-way through communities (e.g. fencing).
- (4) Every effort should be made to prevent the location of the second mainline track from reducing vehicular storage between a grade crossing and a nearby highway intersection, especially at locations where the storage distance would be inadequate to sufficiently store a WB-65 design vehicle. Otherwise, it will be difficult to prevent vehicles from stopping on the crossing.
- (5) The highway approaches of the public highway-rail grade crossings located within the limits of the proposed project should be evaluated for compliance with the minimum requirements of 92 Ill. Adm. Code 1535. Where necessary, the highway approaches should be improved to meet the minimum requirements of the administrative rule (e.g. improve crossings with steep highway approach grades). In addition, highway approach improvements may also need to be performed at all crossings, to meet the minimum requirements of 92 Ill. Adm. Code 1535, to accommodate the installation of the second mainline track. This may require profile modifications to nearby intersections and parallel roadways.
- (6) Public highway-rail grade crossings should be identified and evaluated where the installation of a second mainline track will create roadway geometric issues, including difficulties installing the railroad warning devices and vehicle detection systems. The necessary roadway improvements to address any concerns found should be identified.
- (7) Minimum clearance distances from the second mainline track to private structures (e.g. elevators, buildings), grade separation structures, and parallel public roadways should be determined.
- (8) Pedestrian safety treatments should be identified at crossings used by pedestrians.
- (9) Evaluate the need for additional safety treatments at pedestrian-rail grade crossings located at/near the Dwight passenger station, including accommodations for a second mainline track (e.g. warning of simultaneous train movements).

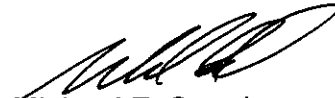

Finally, I would like to receive a copy of the draft Environmental Assessment.

Thank you for the opportunity to comment on IDOT's information gathering phase of the NEPA process for a proposed rail improvement project along the Union Pacific Railroad Company's (UP) Joliet Subdivision, located between Joliet, Will County (railroad milepost 36.7) and Dwight, Grundy County (railroad milepost 72.81).

Dear Sir:

Subject; Environmental Assessment
Joliet to Dwight E A Comment
Union Pacific Railroad's
Joliet Subdivision Improvements

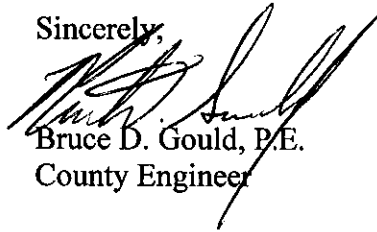

In response to your letter of March 18, 2011 requesting comments relative to the Union Pacific Railroad Dwight – Joliet Improvement, our comments are as follows:

1. How will HSR interact with the UP RR rail port trains that would be serving the new Joliet CenterPoint Railport?
2. Will the townships be contacted for their input as they have several of their routes cross U P RR tracks?
3. At CH 17 (Arsenal Manhattan Road) will this crossing remain as an at-grade or will there be a grade separation proposed? If the at-grade crossing is to remain, will the crossing protection be improved. Also, we have a study underway for improving our roadway in this area. Our proposed roadway section will be one 12-foot lane in each direction separated by a 16-foot wide median, 8-foot wide shoulders and open ditch drainage. As part of the HSR, this crossing will need to be widened.
4. Similarly to Comment 3, At CH 44 (River Road) will this crossing remain as an at-grade crossing or will a grade separation be provided? If crossing remains at at-grade, will the crossing protection be improved?
5. For CH 29 (Strip Mine Road), we have the same concerns as noted in Comment 4. The proposed HSR crossing of Strip Mine Road will be in close proximity to the intersection of Strip Mine Road and Il. Route 53. We are greatly concerned that the existing crossing protection will need to be up graded to provide the necessary safety to the motoring public at this crossing.

March 31, 2011
Page 2.

We hope that these comments are satisfactory for your current needs. Should you want to meet with our staff, please feel free to contact my office to schedule a meeting at 815-727-8476.

Sincerely,

A handwritten signature in black ink, appearing to read "Bruce D. Gould", is written over the typed name and title.

Bruce D. Gould, P.E.

Ms. Jany L. Lyne, Planning & Policy Director

File Code: 1560

Date: March 31, 2011

Mr. George E. Weber
Acting Deputy Director
Illinois DOT - Division of Public & Intermodal Transportation
100 West Randolph Street, Suite 6-600
Chicago, IL 60601

Dear Mr. Weber:

Thank you for your letter dated March 18, 2011, regarding the information gathering on the proposed railroad improvements for the Union Pacific Railroad Dwight-Joliet Improvement Project.

Approximately 3 miles of the existing Union Pacific right-of-way is bordered on one or both sides by National Forest System land at Midewin National Tallgrass Prairie (Midewin). The Union Pacific right-of-way through Midewin is 50 feet on each side measured from the centerline of the railroad.

It is my understanding that the Joliet to Dwight route through Midewin is proposed for the upgrades, material storage, and installing signals, road crossings, crossover work, culverts, and bridges. These and other associated activities will affect National Forest System land managed at Midewin.

The Illinois Land Conservation Act of 1994 (P.L. 104-106) (Sec 2915(a)), the legislation that established Midewin, included a prohibition against the construction of new through roads. This section did grant authorization of rights-of-way for utilities. Railroads are not recognized as utilities. As an agency of the U.S. Government, we must adhere to federal laws and regulations.

In keeping with the intent of the National Environmental Policy Act, other existing rail line routes should be analyzed and considered as alternatives. It appears the decision to eliminate from consideration all other routes from Dwight to Chicago, Illinois has already been made.

There are Threatened, Endangered, and Sensitive animal and plant species and their habitat present in and around the project area. These species and habitat must be addressed and protected.

The increase in maximum train speeds (to 110 mph) would produce a major safety issue that could have a tragic impact on the public visitors, staff, and volunteers needing to cross a high speed rail line several times per day to access recreational facilities, trails systems, and work sites.

On the west side of the existing Union Pacific railroad corridor, a 66-foot utility right-of-way has been previously granted to NICOR Gas Company that must be protected.

There are several active prairie restoration project areas immediately adjacent to the rail corridor which could be adversely be impacted by such an action and must be addressed and protected.

On March 7th, 2011, I received your letter regarding the Tier 1 Environmental Impact Statement, Illinois High Speed Rail from Chicago to St. Louis Agency Scoping Meetings. The letter, dated February 18, 2011, had been sent to the USDA Forest Service Eastern Region (R9) Office in Milwaukee, WI. Unfortunately, the letter was not routed to my attention until after the agency scoping meetings mentioned in your letter had already been completed.

Be assured of our interest in the Tier 1 EIS project. Please add Midewin, using address above, to the mailing lists for the Tier 1 EIS, as well as the EA for the Dwight – Joliet Improvement Project.

If you have any questions please contact Robert Hommes, Prairie Engineer, or Renée Thakali, Restoration Team Leader at (815) 423-6370.

Sincerely,

/s/ Wade A. Spang

April 1, 2011

George Weber
Illinois Department of Transportation
100 West Randolph Street, Suite 6-600
Chicago, IL 60601

Dear Mr. Weber:

This responds to your letter dated March 18, 2011 requesting comments for the preparation of an Environmental Assessment (EA) for the Union Pacific Railroad's (UPRR) Dwight-Joliet Improvement project. The proposed improvements would occur between Joliet, Illinois to Dwight, Illinois and would be located on the Chicago to St. Louis corridor. The project would consist of three components located within UPRR's Joliet Subdivision.

We provided comments to the Federal Railroad Administration (FRA) on May 19, 2010 (enclosed) for an EA and Categorical Exclusion which covers the same UPRR rail line as the proposed project. We also provided comments to your office on October 19, 2010 (enclosed) that responded to a request for comments for the Tier 1 Service Level EA for the Chicago to St. Louis High Speed Passenger Rail (HSR) project. Most recently, we commented on FRA's Notice of Intent (NOI), dated February 14, 2011 for the Tier 1 Environmental Impact Statement (EIS) for the Chicago to St. Louis HSR project. Our comments for the NOI were the same as our October 19, 2010 comments.

We have reviewed the information provided with your most recent letter. Your letter indicates that the Illinois Department of Transportation (IDOT) is seeking grant funding from the FRA for the proposed improvements. As we noted in our May 19, 2010 letter, we do not believe that it is appropriate under the National Environmental Policy Act (NEPA) to evaluate the proposed UPRR Dwight-Joliet Improvement project separately from the larger Chicago to St. Louis HSR project. As we also noted in previous correspondence, the proposed improvements would not be occurring but for the larger HSR project. It is inappropriate under NEPA to evaluate fragmented segments of a larger project (*i.e.*, piecemealing), especially when individual project segments represent a commitment of resources that may constrain the selection of alternatives for the overall project.

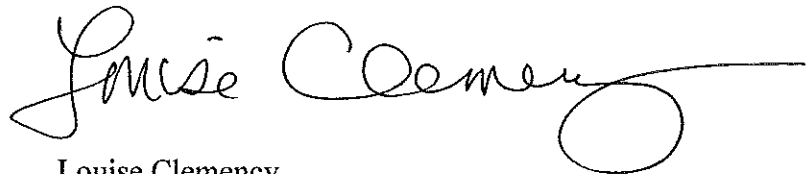

NEPA states that the scope of analysis is to be determined by the range of actions, impacts and alternatives to be considered in the planning effort (§1508.25). The range of actions includes connected actions, which are described as closely related actions which shall be discussed in the same impact statement. The NEPA notes that actions are connected if they: (i) automatically trigger other actions which may require EISs; (ii) cannot or will not proceed unless other actions are taken previously or simultaneously; (iii) are interdependent parts of a larger action and depend on the larger action for their justification. Therefore, we believe that the UPRR Dwight-Joliet Improvement project and Chicago to St. Louis HSR project are connected actions that should not be evaluated separately and that the connected actions should be evaluated as part of the Tier 1 EIS for the Chicago to St. Louis HSR project.

We are also concerned that authorization of the UPRR Dwight-Joliet Improvement project could prematurely lead to elimination of practicable alternatives, between Joliet and Chicago, to the preferred alternative for the larger Chicago to St. Louis HSR project. The map attached to your March 18, 2011 letter shows that improvements would begin along the Joliet Subdivision, north of I-80 (MP 36.7). The most recent map shared with us on March 1, 2011, at the Chicago to St. Louis HSR Agency Scoping meeting, shows the Chicago to Joliet alternatives with alternatives that tie into the Joliet Subdivision south of I-80. Again, we are concerned that authorization of the proposed improvement project could lead to the premature identification of a preferred alternative or elimination of other practicable alternatives.

This letter provides comment under the authority of, and in accordance with, the provisions of National Environmental Policy Act of 1969 (83 Stat. 852 as amended P.L. 91-190, 42 U.S.C. 4321 *et seq.*), the Fish and Wildlife Coordination Act (48 Stat. 401, as amended; 16 U.S.C. 661 *et seq.*) and the Endangered Species Act of 1973, as amended (87 Stat. 884. as amended; 16 U.S.C. 1531 *et seq.*).

If you have any questions, please contact Mr. Shawn Cirton at 847/381-2253, ext. 19 or Mr. Kristopher Lah at 847/381-2253, ext. 15.

Sincerely,

A handwritten signature in cursive script, reading "Louise Clemency". The signature is written in dark ink and is positioned above the printed name and title.

Joliet to Dwight Improvement Project, Environmental Assessment Local Officials Briefings - March 24, 2011

The Local Officials Briefings for the Joliet to Dwight Improvement Project, Environmental Assessment was held on Thursday, March 24, 2011 at the Billie Limacher Bicentennial Park from 10:00 – 11:00am. The meeting included a presentation by IDOT that included information on:

- Chicago to St. Louis Program Overview
- 2010 & 2011 Construction Summary
- Joliet to Dwight Environmental Assessment
- Benefits
- Public Involvement
- Questions/Answers

To announce the March 24, 2011 Local Officials Briefing, a project initiation letter was sent via email on March 18, 2011. The local officials from the following communities, townships, and organizations were invited: Will County Governmental League, City of Joliet, Jackson Township, Village of Elwood, City of Wilmington, Village of Braidwood, Braidwood Nuclear Generating Station, Village of Godley, Village of Braceville, Village of Gardner, Goodfarm Township, Dwight Township, and the Village of Dwight.

The local officials from the following counties were invited: Will County, Grundy County, and Livingston County.

The meeting was attended by 12 people and the following local officials and/or representative was in attendance:

- A.J. Wilhelmi – Illinois State Senator
- Colin Duesing – Will County
- Tony Graff – City of Wilmington
- Jim Haller – City of Joliet
- Rick Kwasneski – Joliet Arsenal Development Authority
- Jamy Lyne – Will County
- Jim Nagle – Wright & Co.
- Jeff Odeen – Exelon Corporation
- Gregory Ruddy – City of Joliet
- Tom Thanus – City of Joliet
- Bill Wilkey – Village of Dwight
- Larry Walsh – Will County

During the question and answer session of the meeting, the following topics were discussed:

- Jim Haller – Double tracking Joliet to Elwood
 - Received questions regarding the location of the ‘new’ second track.
 - Received questions regarding sound walls and potential quiet zones.
- Jim Haller – Signaling capabilities
 - Will the signaling devices be capable of quiet zones?
- Bill Wilkey – Coordination with IDOT
 - Will Village of Dwight engineers be able to coordinate with IDOT and Program Management Team engineers?
- Bill Wilkey – Train Speeds
 - Will trains slow down when traveling through the communities of Odell and Gardner?
- Colin Duesing – Union Pacific freight traffic
 - Is Union Pacific planning on increasing the number of freight trains?
- Village of Elwood- Quiet Zones
 - We currently have a quiet zone, will that stay in place?
- Village of Elwood- Safety
 - Will any new safety precautions for truck routes be put in place?
 - (Commented that trucks are knocking down gates frequently at crossing)
- Tony Graff – Bloomington Curve
 - Will you be smoothing the curve in Bloomington?
- Tony Graff- Crossing Closures

FEDERAL 106 PROJECT

NO HISTORIC PROPERTIES AFFECTED

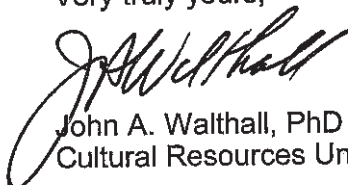

Ms. Anne Haaker
Deputy State Historic Preservation Officer
Illinois Historic Preservation Agency
Springfield, Illinois 62701

Dear Ms. Haaker:

Attached is an Environment Survey Request and photographic documentation concerning the project referenced above. Three bridges are included within the project right of way. The bridges include a concrete pillar and steel beam structure, a concrete box culvert and a small concrete arch. None of the bridges are eligible for inclusion in the National Register of Historic places under Criterion C. Any right-of-way or construction easement acquisition associated with this project will be kept to a minimum and will be confined to adjacent previously disturbed soils.

In accordance with the established procedure for coordination of proposed Illinois Department of Transportation projects, we request the concurrence of the State Historic Preservation Officer in our determination that no historic properties, subject to protection under Section 106 of the National Historic Preservation Act of 1966 as amended, will be affected by the proposed construction activities.

Very truly yours,

John A. Walthall, PhD
Cultural Resources Unit

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Ms. Bishop:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor. The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber
Bureau of Railroads, Bureau Chief

The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber
Bureau of Railroads, Bureau Chief

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Isoe:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Scott:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber
Bureau of Railroads, Bureau Chief

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Ms. Simon:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Westlake:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Cassem:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber
Bureau of Railroads, Bureau Chief

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Cook:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Ms. Miller:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor. The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Offerman:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

Sincerely,

George Weber
Bureau of Railroads, Bureau Chief

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Paddock:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Walsh:

The Illinois Department of Transportation (IDOT), in cooperation with the Federal Railroad Administration (FRA) is initiating the information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements included in the Union Pacific Railroad (UPRR) Dwight-Joliet Siding Improvement Project. Because the project may affect your area of expertise, your facilities, or your activities or programs, we are seeking your comments on this project.

This project, which is located on the Chicago to St. Louis corridor, will encompass the final design and construction of 7.0 miles of new 2nd mainline track between Elwood and Joliet. Also included are the signal, bridge/culvert, road crossing and intermediate crossover work required to complete these installations. The project will enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. This project will not result in an increase in train speeds or service levels.

Note that this project will not affect the routing decisions for future proposed passenger service on the Chicago-St. Louis Corridor, which will be studied in an Environmental Impact Statement funded under FRA's HSIPR program, to be initiated soon. In addition, this project is fully complementary to the projects awarded under the FRA High-Speed and Intercity Passenger Rail (HSIPR) Grant to IDOT that will be implemented in the section south of Dwight, which were supported under FRA's 2004 Record of Decision on the Chicago-St. Louis Corridor.

The extended length of second main track in this section will increase the options a dispatcher has available for arranging meets or other complex moves, thereby reducing the potential for delay to one or more of the trains operating over this line. Under the current schedules, there are about 16 trains per day operating over this section of line, including 10 Amtrak trains (including the two long distance "Texas Eagle" trains) and six UPRR freight trains (a combination of local and through trains).

As part of the FRA High-Speed and Intercity Passenger Rail (HSIPR) program application process, UPRR's Network Operations personnel estimated that there would be a 10% increase in on-time performance due to the implementation of these physical plant improvements. However, the actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freights at 60 mph.

In order to prepare the necessary NEPA documents to provide environmental clearance for the project, we are preparing an Environmental Assessment (EA). The attached project map shows the project limits. The majority of the work will occur within UPRR's right-of-way (ROW). Temporary easement or ROW acquisition may be required at the stream crossings of the Sugar Run Creek at MP 38.8, the Cedar Creek at MP 42.6 and Jackson Creek at MP 44.4 in Will County, IL. Work on these structures would be limited to extending the culvert at MP 38.8 to the east, extending the bridge at MP 42.6 to the east and replacement of the one track bridge at MP 44.4 with a double track bridge. Staging areas for construction equipment, materials, and spoils will be located within UPRR's right-of-way (ROW) of the Joliet Intermodal Facility which is currently being constructed.

The comments and material you supply will be used to determine if the proposed improvements may have impacts that warrant further consideration. Your comments will be incorporated into the environmental planning process and Environmental Assessment document as appropriate. Because this effort is part of an FRA grant application, we are operating under an accelerated schedule and would appreciate comments by May 12, 2010.

A draft of the Environmental Assessment will be submitted with our FRA grant application, due on May 19th, and we can send you a copy for your review and comment at the time of the FRA grant application submittal. Please let us know if you would like a copy of the draft Environmental Assessment for your review.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@illinois.gov.

The Illinois Department of Transportation thanks you in advance for your prompt review and responses to our request for comments.

MEETING MINUTES

SUBJECT: Union Pacific's New 2nd Mainline Track Project from Joliet (MP 36.8) to Elwood (MP 44.69), IL
Environmental Assessment

LOCATION: Joliet City Hall, 150 W. Washington St., Joliet IL 60432

MEETING DATE: March 12, 2010 - 11:00am to 11:30pm

ATTENDEES: Illinois Department of Transportation (IDOT): George Weber
Parsons Brinckerhoff (PB): Phil Pasterak, Thomas Coleman, Tim Selover

See attached sign-in sheet.

INVITED STAKEHOLDERS Will County Governmental League, Will County Executive Office, Will County Highway Department, Will County Community Development Department, Grundy County Administrator, Grundy County Land Use Department, Grundy County Highway Department, City of Joliet, City of Wilmington, Village of Elwood

Discussion:

The meeting began at 11:00 AM. After introductions, Mr. Weber began with an overview of the Union Pacific Railroad's (UPRR) New 2nd Mainline Track Project from Joliet (MP 36.8) to Elwood (44.69), IL. He noted that the project encompasses the final design and construction of 6 miles of new 2nd mainline track between Joliet and Elwood. The project consists of track improvements to the existing double tracks between MP 36.8 to MP 38.5, and adding a second mainline track to the single track between MP 38.5 to MP 44.69. In approximately the northern two miles of the project area, which are already double-tracked, the track improvements would include the addition of crossovers between the two existing tracks as well as turnout/signal upgrades. Additional construction activities throughout the entire project area include the installation of turnouts and approximately 6 miles of new mainline track. The project includes installation of Centralized Traffic Control (CTC) signal system capability on the new trackage.

Mr. Weber discussed the project's purpose is to enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Elwood. This purpose is fully complementary with the projects awarded under the Federal Railroad Administration (FRA) High-Speed Intercity Passenger Rail (HSIPR) grant to IDOT that will be implemented in the section from Dwight to St. Louis. Consistent with the Chicago-St. Louis High Speed Rail Project 2003 Final Environmental Impact Statement (FEIS) and 2004 Record of Decision (ROD), no physical improvements or changes in Amtrak operating characteristics (i.e., number and speed of trains) will be made north of Dwight. The actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freight trains at 60 mph.

Mr Weber then gave an overview of IDOT's High Speed Rail Program and explained that the project has independent utility in addressing mainline track capacity and operational issues for existing and expected near-term freight and Amtrak services, and does not preclude other options to address the Dwight-Chicago portion of High Speed Rail if further corridor studies are initiated or advanced under the National Environmental Protection Act (NEPA). The project is proposed to proceed as part of the HSIPR Program for Final Design (FD)/Construction using FRA funding, as well as local and railroad resources. The next round of funding applications are due May 19th 2010.

Mr. Weber then invited the attendees to review a roll plot of the planned improvements and opened the meeting for public comment.

A question was asked where the construction staging areas would be located. Mr. Weber noted that the project staging area would be located at the UPRR Joliet Intermodal Yard and/or within the UPRR's right-of-way (ROW).

Scott Haywood, Village of Elwood, inquired how far the new second track would extend into Elwood and if train traffic would back up at the current spur located between Mississippi Street and South Thiele Road (Diagonal Road). Mr. Haywood explained that the Village is concerned about long freight trains blocking Mississippi Street. Mr. Weber explained that new 2nd track would end at MP 44.69 and not extend into the Village of Elwood. There would be no increase in the frequency of Amtrak trains.

There was then a follow-up discussion on the future operation of the UPRR Joliet Intermodal Yard and how it could impact train traffic through Elwood. Mr. Weber stated that the UPRR has stated that all initial freight traffic would initially come from the north into the yard and not impact Elwood. However, freight train traffic may increase through Elwood as growth in the economy increases demand.

A question was asked regarding the grain elevator located south of Elwood and approximately 5.0 miles from the project end at MP 44.69. The facility has scales located on east side of UPRR track and storage silos on the west side of the UPRR track. There is currently a high level of truck traffic using a private crossing. Mr. Weber explained that the existing grade crossings would be improved along the project corridor. He would check to see if this location, which is not located on project corridor, is planned for improvement.

A question was asked about the extension of the Metra Heritage Corridor south of Joliet. Mr. Weber explained that this was not within the scope of this project.

Mr. Weber closed the meeting by informing the audience that it is a goal of the IDOT High Speed Rail Program to keep communities informed about project and the construction.

Additional comments can be submitted by phone or via e-mail directly to George Weber at:

George Weber
Bureau of Railroads, Bureau Chief
Illinois Department of Transportation
100 West Randolph Street

**Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), IL**

Environmental Assessment

May 12, 2010 Stakeholder Meeting
Joliet City Hall, 150 W. Washington St, Joliet, Ill 60432

**Responses to Stakeholder Comments and Questions
17 May 2010**

Questions and comments regarding the Union Pacific Railroad's (UPRR) New 2nd Mainline Track Project from Joliet (MP 36.8) to Elwood (MP 44.69), IL, were submitted by a variety of individuals and groups from the study area at the study's stakeholder outreach meeting held on May 12, 2010. In addition, public comments and questions on the project were submitted directly to the Illinois Department of Transportation (IDOT) Bureau of Railroads via e-mail, fax and phone through May 14, 2010.

All of the questions and comments have been collected and compiled to provide a comprehensive review of the issues raised along with IDOT's responses. Some of the comments received were very similar in nature. As a result, similar comments and their responses have been grouped by topic and "General Comment" heading below to avoid duplicative responses. Questions or comments requiring individual or specific responses are also included below along with unique responses.

The list below shows the index of topics covered in this report, along with the number of comments received for each. Because comments often refer to more than one topic, the numbers associated with each do not equal the total number of comments received.

Index of Topics

1. Construction staging area and construction impacts
2. Potential train traffic impact to the Village of Elwood
3. Grade crossing safety
4. Other issues to be further addressed in design and/or construction

1. Construction Staging Area and Construction Impacts

General Comment:

Where is the location of the construction staging area for the project?

Response to Overall Comment Category:

The staging areas for construction equipment, materials, and spoils would be located within the UPRR's right-of-way (ROW) of the Joliet Intermodal Facility, which is currently under construction. The intermodal facility site is located 2,000 feet west of the UPRR ROW near Laraway Road and Brandon Road.

No displacements are expected as the majority of the track improvements would occur within the UPRR's ROW. Temporary easements may need to be obtained by UPRR for construction access and to stage materials for the construction of new culverts and bridges located at mile post (MP) 38.8, 42.6 and 44.4; however, these easements will not require the relocation of businesses or residences, or impact sensitive environments.

Construction noise will be mitigated by limiting construction between the hours of 7:00 am to 6:00 pm.

2. Potential Train Traffic Impact to the Village of Elwood

General Comments:

What is the impact of increased train traffic due to the project and/or the Joliet Yard through the Village of Elwood, which is located south of the project end point at MP 44.69?

Response to Overall Comment Category:

The project purpose is to enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Elwood. The project and the new 2nd mainline track would end at MP 44.69 and not extend further south into the Village of Elwood. Overall, the project will result in improvements to on-time-performance on the existing route and provide for an increase in average speeds and shorter trip times; thus, the project will not have a detrimental effect on other railway operations.

With the opening of the new Joliet intermodal terminal, the number of freight trains is expected to increase in the next year from five per day to 12 per day. Construction began in August 2009 and the initial phase is scheduled for completion in June 2010. Additional growth in freight trains is also expected beyond the 12 trains per day with the potential of up to 22 trains per day by 2017. The existing number of Amtrak trains is 10 trains per day. The actual train speeds on this section of line would not increase due to this work – passenger trains on the mainline track would continue to operate at 79 mph; freight trains at 60 mph.

The UPRR has stated that the freight traffic from the Joliet Intermodal Yard would initially be directed north and not result in an immediate increase in freight traffic south of the Joliet Intermodal Yard towards Elwood. IDOT does not expect an increase freight train through Elwood or in using the existing siding in Elwood. However, freight train traffic may increase on the line south of the Joliet Intermodal Yard when customer demands for freight service increase due to economic changes.

A Memorandum of Understanding (MOU) is in the process of negotiations with IDOT and UPRR and will address future train operations along corridor between Joliet and Dwight. The issue of blocking of grade crossings due to long train car lengths or stopping of trains is also regulated by the Illinois Commerce Commission (ICC). Discussions are being held with the ICC to address to address grade crosses and safety along the corridor.

A goal of the IDOT High Speed Rail Program is to keep communities informed throughout project from design, construction and operation.

3. Grade Crossings

General Comment:

Will grade crossings be improved as result of the project?

Response to Overall Comment Category:

Consistent with FRA guidelines and good engineering practice, crossings would be warned or protected as appropriate. With the addition of a second track, some crossings would warrant alternative treatments to those that now exist. These modifications may include installation of new protection devices, installation of warning devices and/or installation of electrical lines.

At those grade crossings where rail construction is proposed, the crossings may be closed and barricaded for short durations (a few days per crossing) and vehicular/pedestrian detours will be utilized to re-route traffic to alternate at-grade crossings throughout this time period. Work will be performed during daylight hours for safety considerations and also to restrict construction noise to the daylight hours.

To mitigate road closures, UPRR will coordinate with the appropriate municipalities or agencies (for example, the City of Joliet, Village of Elwood, Will County, and IDOT) to determine the detour routes and to ensure that the proper public notifications (for example, public transportation and emergency services) and signage are utilized during this time.

4. Other Issues to be further Addressed

General Comment:

Will this project affect the grain elevator located south of Elwood and approximately 5.0 miles south of the project end at MP 44.69? The facility has scales located on east side of UP track and storage silos on the west side of the UP track. There currently a high level of truck traffic using a private crossing.

Response to Overall Comment Category:

This crossing is not within project area for improvements under this Environmental Assessment (EA). However, IDOT is working with the ICC to improve and upgrade grade crossings in the Joliet to Dwight corridor.

General Comment:

Will this project affect the extension of the Metra Heritage Corridor south of Joliet?

Response to Overall Comment Category:

Future extension of the Metra Heritage Corridor is not within the scope of the project.

STATE OF ILLINOIS

ILLINOIS COMMERCE COMMISSION TRANSPORTATION DIVISION / RAIL SAFETY SECTION

Michael E. Stead

Rail Safety Program Administrator

May 13, 2010

George Weber
Chief, Bureau of Railroads
Division of Public and Intermodal Transportation
Illinois Department of Transportation
100 W. Randolph Street, Suite 6-600
Chicago, IL 60601

Dear Mr. Weber:

This in response to your letter dated April 30, 2010, with which you provided information regarding a proposed project to construct a second main track, adjacent to the Union Pacific Railroad Company's (UP) main track, located between Joliet, Will County (railroad milepost 36.8) and Elwood, Will County (railroad milepost 44.69). With the letter you provided this office with an opportunity to provide comments for the Illinois Department of Transportation's (IDOT) information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements.

Following a review of the information you provided, as well as our files, Staff of the Illinois Commerce Commission (Staff) recommends the following:

- (1) Necessary safety improvements should be identified for all public highway-rail grade crossings where vehicular traffic backs up across the tracks or vehicle storage is insufficient for a design vehicle due to an adjacent roadway. Furthermore, safety improvements should address any issues concerning insufficient space for school buses and hazardous material vehicles making their mandatory stop at a crossing without extending into a parallel highway. This is especially critical at those locations where vehicular storage between a highway intersection and the crossing is reduced due to the installation of an additional proposed track.
- (2) The highway approaches of the public highway-rail grade crossings located along the proposed siding track should be evaluated for compliance with the minimum criteria of 92 Ill. Adm. Code 1535. Where necessary, improvements to the highway approaches should be made to bring the highway approaches in compliance (e.g. improve crossings with steep highway approach grades).
- (3) Identify public highway-rail grade crossings and the necessary improvements where the additional track will create roadway geometric issues, including difficulties installing the railroad warning devices and, issues concerning design vehicle turning radii to/from a parallel highway.

527 E. Capitol Avenue, Springfield, IL 62701
Telephone [217] 782-7660 Fax [217] 524-4637
www.icc.illinois.gov

Mr. George Weber
May 13, 2010
Page Two

- (4) Where the installation of the additional track reduces the distance to a parallel highway and increases the potential of a left-turning motorist from the parallel highway turning short of a lowered gate, four-quadrant gates should be installed.
- (5) Pedestrian safety treatments should be identified at crossings used by pedestrians.
- (6) Existing public and private grade crossings that are either redundant, unnecessary or where safety improvements cannot reasonably be performed, due to crossing geometry or proximity of complex highway intersections, should be identified for closure.

Thank you for the opportunity to comment on IDOT's information gathering phase of the NEPA documents being prepared for the project to construct a second main track, adjacent to the UP's main track, located between Joliet and Elwood. If you have any questions, or need additional information, please contact John Blair, Assistant Rail Safety Program Administrator, at (217) 785-8421 or jblair@icc.illinois.gov, or me at (217) 557-1285 or mstead@icc.illinois.gov.

Very truly yours,

Michael E. Stead

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Stead:

Thank you for your letter dated May 13, 2010 in response to my letter of April 30, 2010 requesting comments from the Illinois Commerce Commission on this element of the State's proposed High Speed Rail project between Chicago and St. Louis. The subject improvement involves adding a second main track on the Union Pacific (UP) right-of-way between Joliet and Elwood. IDOT is currently gathering information on project elements as part of the National Environmental Policy Act (NEPA) process. Because the project may affect rail-highway grade crossings which are under ICC's purview, we were seeking your comments on the project.

As discussed with you in our telephone conference on May 12th, IDOT and our consultant Parsons Brinckerhoff are preparing the NEPA Environmental Assessment and are in the early stages of plan development. We appreciate the information provided in your letter as to the necessary safety improvements that may be needed in the project and in this particular segment. The location of parallel roadways adjacent to the UP right-of-way will likely require designs to provide for proper turning vehicle storage. Roadway profiles may also require adjustment where necessary to avoid steep approach grades. As discussed we intend to conduct joint diagnostic studies with the ICC and UP of all grade crossings in the corridor to identify necessary improvements.

Thank you again for your comments. We look forward to working with you and your staff in developing detailed plans for the project and in the implementation of the State's High Speed Rail program

Sincerely,

A handwritten signature in cursive script, appearing to read 'George Weber'.

Subject: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
Joliet to Elwood, Illinois

Dear Mr. Weber:

Thank you for coordinating with the Federal Highway Administration (FHWA) regarding the proposed improvements to the Union Pacific Railroad and seeking our comments. We have reviewed the materials you submitted to us and we have concluded FHWA involvement in the proposed project is not warranted because the Interstate system will not be affected by the project. We do not anticipate this project will require an agency action by FHWA and we are not aware of any potential impacts to FHWA projects or programs that may result from the proposed project. Therefore, we do not need to review the Environmental Assessment for this project.

Please contact me via email at (Matt.Fuller@dot.gov), if project circumstances change that would warrant our involvement.

Sincerely,

Matt Fuller
Environmental Programs Engineer

Dear Mr. Weber,

Subject: County Highway 17
Arsenal Road
Environmental Assessment
Union Pacific Railroad's New 2nd Mainline
Track from Joliet to Elwood, Illinois

This letter is in response to your April 30, 2010 correspondence regarding the above subject. This project will impact the existing railroad crossing of County Highway 17, Arsenal Road. Please be aware that the Will County Department of Highways is currently undergoing a Phase I study to widen Arsenal Road in this area under section 00-00117-13-FP. The scope of the County project is to reconstruct the existing 2-lane cross-section with a 3-lane cross-section east of the Union Pacific Railway, through the railroad, and west to Baseline Road. Further coordination between the two projects will need to be facilitated.

As per your letter, please provide a copy of the Environmental Assessment as it becomes available for review.

If there are any questions, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to be "B. D. Gould".

Re: Environmental Assessment
Union Pacific Railroad's New 2nd Mainline Track Project
from Joliet (MP 36.8) to Elwood (MP 44.69), Illinois

Dear Mr. Gould:

Thank you for your letter dated May 6, 2010 in response to my letter of April 30, 2010 requesting comments from Will County. We appreciate your letter stating Will County's plan to widen County Highway 17 and we have notified Union Pacific of this project. We will continue to coordinate these projects since they are interrelated.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@Illinois.gov.

The Illinois Department of Transportation thanks you for your interest in this project.

Sincerely,

A handwritten signature in cursive script, reading "George Weber".

MEETING MINUTES

SUBJECT: Union Pacific Railroad's New Siding Project from Braidwood (MP 58.26) to Braceville (60.44), IL
Categorical Exclusion

LOCATION: Joliet City Hall, 150 W. Washington St., Joliet IL 60432

MEETING DATE: March 12, 2010 - 11:30am to 12:00pm

ATTENDEES: Illinois Department of Transportation (IDOT): George Weber
Parsons Brinckerhoff (PB): Phil Pasterak, Thomas Coleman, Tim Selover

INVITED STAKEHOLDERS See attached sign-in sheet.
Will County Governmental League, Will County Executive Office, Will County Highway Department, Will County Community Development Department, Grundy County Administrator, Grundy County Land Use Department, Grundy County Highway Department, City of Wilmington Village of Braceville, City of Braidwood, Village of Godley, Exelon Generation Company

Discussion:

The meeting began at 11:30 AM. After introductions, Mr. Weber began with an overview of the Union Pacific Railroad's (UPRR) New Siding Project from Braidwood (MP 58.26) to Braceville (60.44), IL. He noted that the project consists of the construction of a siding track along the northwest side of the existing UPRR mainline track. The improvement begins at MP 58.20, approximately 750 ft. northeast of S. Division Street in Braidwood, and extends 2.1 miles southwest to MP 60.44 in Braceville. Construction would occur within the existing UPRR right-of-way and include new turnouts, approximately 2.3 miles of siding track, including upgrading the signal system on the new trackage to a centralized traffic control (CTC) signal system, and grade crossings at S. Division Street and Kankakee Road. Construction activities would commence in early 2011 and be completed by Fall 2011, assuming the proposed project is approved as a Categorical Exclusion (CE) from the National Environmental Policy Act (NEPA).

Mr. Weber discussed the project's purpose is to enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Elwood. This purpose is fully complementary with the projects awarded under the Federal Railroad Administration (FRA) High-Speed Intercity Passenger Rail (HSIPR) grant to IDOT that will be implemented in the section south of Dwight. Consistent with the Chicago-St. Louis High Speed Rail Project 2003 Final Environmental Impact Statement (FEIS) and 2004 Record of Decision (ROD), no physical improvements or changes in Amtrak operating characteristics (i.e., number and speed of trains) will be made north of Dwight. The actual train speeds on this section of line would not increase due to this work – passenger trains would continue to operate at 79 mph; freight trains at 60 mph.

Mr Weber then gave an overview of IDOT's High Speed Rail Program and explained that the project has independent utility in addressing mainline track capacity and operational issues for existing and expected near-term freight and Amtrak services, and does not preclude other options to address the Dwight-Chicago portion of High Speed Rail if further corridor studies are initiated or advanced under NEPA. The project is proposed to proceed as part of the HSIPR Program for Final Design (FD)/Construction using FRA funding, as well as local and railroad resources. The next round of funding applications are due May 19th 2010.

Mr. Weber then invited the attendees to review a roll plot of the planned improvements and opened the meeting for public comment.

A question was asked if trains would be stopped over Kankakee Street and Division Street, which are at-grade road-rail crossings. Representatives from Exelon Generation Company stated that there are 2,000 cars entering the Braidwood plant and blocking the Division Street crossing should be avoided. They inquired if the siding track could be moved south of Division Street. Additionally, they asked if a study had been performed to show the change in train traffic with the siding or access issues to the Braidwood Plant. Exelon further asked if there would be construction impacts or closing of Route 53 or State Route 129 which run parallel to the UP tracks.

In response, Mr. Weber explained that the construction staging area would be located in the roadside/trackside ditch in UPRR right-of-way (ROW) near the S. Division Street grade crossing or at UPRR Joliet Intermodal Yard. The crossing at Division Street will be blocked when trains pass along the mainline, as they currently do, and when trains slow to diverge from the mainline to the siding. He noted that the only thing that will increase the chance of crossing being blocked will be a freight train parked temporarily in the siding while awaiting the passing of another train. He further explained it is not the goal of the project to use federal money to construct a siding for train car storage. This will be addressed in Memorandum of Understanding (MOU) between IDOT and UPRR.

A follow-up question was asked if the Village of Godley fire and police were notified. Tami Brannon from Village of Godley said she would inform the police and fire services about the project.

A question was asked if there is plan to upgrade the traffic signals and crossing gates at Division Street and Tony Graff, City of Wilmington, asked if the grade crossings in Wilmington would be upgraded. Mr. Weber explained it is IDOT's long term goal to upgrade all the crossings between Joliet and Dwight. There are on-going discussions with Illinois Commerce Commission to identify funding and improve safety at grade crossings.

A discussion on what permits would be required by the UPRR for the project followed. Mr. Weber explained that the UPRR would be required to obtain all permits as there are no exemptions for the railroad.

Mr. Weber closed the meeting by informing the audience that it is a goal of the IDOT High Speed Rail Program to keep communities informed about project and the construction.

Additional comments can be submitted by phone or via e-mail directly to George Weber at:

**Union Pacific Railroad's New Siding Project from
Braidwood (MP 58.26) to Braceville (MP 60.44), IL**

Categorical Exclusion

May 12, 2010 Stakeholder Meeting
Joliet City Hall, 150 W. Washington St, Joliet, Ill 60432

**Responses to Stakeholder Comments and Questions
17 May 2010**

Written questions and comments regarding the Union Pacific Railroad's (UPRR) New Siding Project from Braidwood (MP 58.26) to Braceville (MP 60.44), IL were submitted by a variety of individuals and groups from the study area at the study's stakeholder outreach meeting held on May 12, 2010. In addition, public comments and questions on the project were submitted directly to the Illinois Department of Transportation (IDOT) Bureau of Railroads via e-mail, fax and phone through May 14, 2010.

All of the questions and comments have been collected and compiled to provide a comprehensive review of the issues raised along with IDOT's responses. Some of the comments received were very similar in nature. As a result, similar comments and their responses have been grouped by topic and "General Comment" heading below to avoid duplicative responses. Questions or comments requiring individual or specific responses are also included below along with unique responses.

The list below shows the index of topics covered in this report, along with the number of comments received for each. Because comments often refer to more than one topic, the numbers associated with each do not equal the total number of comments received.

Index of Topics

1. Construction staging area and construction impacts.
2. Potential train traffic impact to the area.
3. Braidwood Nuclear Power Station.
4. Crossing safety.
5. Other Issues to be further addressed in design and/or construction.

1. Construction Staging Area and Construction Impacts.

General Comment:

Where is the location of the construction staging area for the project?

Response to Overall Comment Category:

Construction would occur within the existing UPRR right-of-way (ROW)

Track construction would require earthen fill at some locations and excavation at other locations for subgrade construction. Foundations will be required for the new signal masts. If additional fill were required it would be brought in by truck from a borrow area to be determined by the contractor outside of the project area. Twelve inches of base material would be placed on

subgrade. Ballast would be brought in by train to stabilize the track embankments. The ballast would be obtained from one of UPRR's existing pits.

The construction staging area would be located in the roadside/tracksides ditch in UPRR ROW near the S. Division Street grade crossing, in Braidwood. Construction activities will commence in early 2011 and be completed by fall 2011, assuming the proposed project is approved as a Categorical Exclusion (CE) from the National Environmental Policy Act (NEPA).

2. Potential Train Traffic Impact to the area

General Comment:

What is the impact on train traffic through the Village of Godley?

Response to Overall Comment Category:

The project purpose is to enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Elwood. Overall, the project will result in improvements to on-time-performance on the existing route and provide for an increase in average speeds and shorter trip times; thus, the project will not have a detrimental effect on other railway operations..

Due to the more efficient train movements in this area, the grade crossings will not be adversely impacted. These improvements may serve to reduce the traffic delay at these crossings as well as adjacent crossings. At this time no increase in the number of freight trains or operating speed are planned for this area.

A Memorandum of Understanding (MOU) is in the process of negotiations with IDOT and UPRR and will address future train operations along corridor between Joliet and Dwight. The issue of blocking of grade crossings due to long train car lengths or stopping of trains is also regulated by the Illinois Commerce Commission (ICC). Discussions are being held with the ICC to address to address grade crossings and safety along the corridor.

A goal of the IDOT High Speed Rail Program is to keep communities informed throughout project from design, construction and operation.

3. Braidwood Nuclear Power Station

General Comment:

Has a study been preformed to show the change in train traffic today and with new siding in respect to the grade crossings at S. Division Street and Kankakee Street?

Response to Overall Comment Category:

A specific study to show the change in freight traffic due to project has not been completed. The purpose of the project is to enhance capacity and increase the fluidity of operations on the UPRR Joliet Subdivision in the line section between Joliet and Dwight. Under the present infrastructure configuration, delays to passenger and freight trains can and do occur on the 37-mile line section between Joliet and Dwight. For example, "Lincoln Service" trains 300 and 301 (first departures of the day northbound and southbound, respectively) are scheduled to meet north of Dwight, but the limited siding and track capacity, along with frequent road crossings in this section constrains the meet locations, subjecting these trains to delays. Under the current

schedules, there are about 15 trains per day operating over this section of line, including 10 Amtrak trains and five UPRR freights (a combination of local and through trains). The project will benefit existing medium- and long-distance Amtrak service and will result in improvements to on-time-performance on the existing Chicago-St. Louis route and provide for an increase in average speeds and shorter trip times.

IDOT does not expect the new siding track to be used for storage of freight trains for extended periods of time. Freight trains would be stopped for only a short duration of time to allow the passing of Amtrak trains. This event may be several times a day or not all depending on daily freight train and Amtrak schedules.

4. Crossing Safety

General Comment:

Will grade crossings be improved as result of the project?

Response to Overall Comment Category:

The grade crossings at S. Division St. and Kankakee Rd. will be temporarily impacted due to the construction of the siding track. The crossings may be closed and barricaded for short durations (a few days per crossing) and vehicular/pedestrian detours will be utilized to re-route traffic to alternate at-grade crossings throughout this time period. Work will be performed during daylight hours for safety considerations and also to restrict construction noise.

To mitigate for the road closures, UPRR will coordinate with the appropriate municipalities and agencies (for example, the Cities of Braidwood and Braceville, Village of Godley, Grundy County, Will County, and IDOT) to determine the detour routes and to ensure that the proper public notifications (for example, public transportation and emergency services) and signage are utilized during this time.

5. Other Issues to be further addressed in design and/or construction.

General Comment:

Are there any trains carrying hazardous materials that will use the siding?

Response to Overall Comment Category:

Current UPRR freight traffic on this segment does not typically carry hazardous materials.

General Comment:

What types of permits are required for construction of the project?

Response to Overall Comment Category:

A local stormwater permit will be required for all hydraulic structures located within Will County. A permit will also be required from the Illinois Department of Natural Resources (IDNR) for the structure replacement/extensions. Individual IDNR permits will be required for the structures located within a Federal Emergency Management Agency (FEMA) designated floodway, while the others will comply with the non-notification Statewide Permits requirements. No stormwater permits are required from Grundy County.

It is the responsibility of the UPRR to secure all natural resources permits prior to construction. This includes, but is not limited to the Section 404 permit from the U.S. Army Corps of Engineers, Section 401 Water Quality Certification from the Illinois Environmental Protection Agency (IEPA), or other permits that may be required.

Prior to construction and as part of the wetland permitting process, the UPRR will secure the necessary wetland mitigation as required for the Section 404 Permit. As wetland banking is the most efficient manner to provide wetland mitigation, the UPRR will provide the name of the wetland bank utilized as well as proof of purchase of the required credits.

STATE OF ILLINOIS

ILLINOIS COMMERCE COMMISSION TRANSPORTATION DIVISION / RAIL SAFETY SECTION

Michael E. Stead

Rail Safety Program Administrator

May 13, 2010

George Weber
Chief, Bureau of Railroads
Division of Public and Intermodal Transportation
Illinois Department of Transportation
100 W. Randolph Street, Suite 6-600
Chicago, IL 60601

Dear Mr. Weber:

This in response to your letter dated April 30, 2010, with which you provided information regarding a proposed project to construct a new 2.3 mile passing siding track, adjacent to the Union Pacific Railroad Company's (UP) main track, located between Braidwood, Will County (railroad milepost 58.26) and Braceville, Grundy County (railroad milepost 60.44). With the letter you provided this office with an opportunity to provide comments for the Illinois Department of Transportation's (IDOT) information gathering phase of the National Environmental Policy Act (NEPA) documents being prepared for the proposed improvements.

Following a review of the information you provided, as well as our files, Staff of the Illinois Commerce Commission (Staff) recommends the following:

- (1) Necessary safety improvements should be identified for all public highway-rail grade crossings where vehicular traffic backs up across the tracks or vehicle storage is insufficient for a design vehicle due to an adjacent roadway. Furthermore, safety improvements should address any issues concerning insufficient space for school buses and hazardous material vehicles making their mandatory stop at a crossing without extending into a parallel highway. This is especially critical at those locations where vehicular storage between a highway intersection and the crossing is reduced due to the installation of an additional proposed track.
- (2) The highway approaches of the public highway-rail grade crossings located along the proposed siding track should be evaluated for compliance with the minimum criteria of 92 Ill. Adm. Code 1535. Where necessary, improvements to the highway approaches should be made to bring the highway approaches in compliance (e.g. improve crossings with steep highway approach grades).
- (3) Identify public highway-rail grade crossings and the necessary improvements where the additional track will create roadway geometric issues, including difficulties installing the railroad warning devices and, issues concerning design vehicle turning radii to/from a parallel highway.

527 E. Capitol Avenue, Springfield, IL 62701
Telephone [217] 782-7660 Fax [217] 524-4637
www.icc.illinois.gov

Mr. George Weber
May 13, 201
Page Two

- (4) Where the installation of the additional track reduces the distance to a parallel highway, and increases the potential for a left-turning motorist from the parallel highway to turn short of a lowered gate, four-quadrant gates should be installed.
- (5) Pedestrian safety treatments should be identified at grade crossings used by pedestrians.
- (6) Existing public and private grade crossings that are either redundant, unnecessary or where safety improvements cannot reasonably be performed, due to crossing geometry or proximity of complex highway intersections, should be identified for closure.

Thank you for the opportunity to comment on IDOT's information gathering phase of the NEPA documents being prepared for the proposed project to construct a new 2.3 mile passing siding track, adjacent to the Union Pacific Railroad Company's (UP) main track, located between Braidwood and Braceville. If you have any questions, or need additional information, please contact John Blair, Assistant Rail Safety Program Administrator, at (217) 785-8421 or jblair@icc.illinois.gov, or me at (217) 557-1285 or mstead@icc.illinois.gov.

Very truly yours,

Michael E. Stead

Re: Environmental Assessment
Union Pacific Railroad's New Passing Siding Project
from Braidwood (MP 58.26) to Braceville (MP 60.44), Illinois

Dear Mr. Stead:

Thank you for your letter dated May 13, 2010 in response to my letter of April 30, 2010 requesting comments from the Illinois Commerce Commission on this element of the State's proposed High Speed Rail project between Chicago and St. Louis. The subject improvement involves adding a passing track on the Union Pacific (UP) right-of-way between Braidwood and Braceville. IDOT is currently gathering information on project elements as part of the National Environmental Policy Act (NEPA) process. Because the project may affect rail-highway grade crossings which are under ICC's purview, we were seeking your comments on the project.

As discussed with you in our telephone conference on May 12th, IDOT and our consultant Parsons Brinckerhoff are preparing the NEPA Environmental Assessment and are in the early stages of plan development. We appreciate the information provided in your letter as to the necessary safety improvements that may be needed in the project and in this particular segment. The location of parallel roadways adjacent to the UP right-of-way will likely require designs to provide for proper turning vehicle storage. Roadway profiles may also require adjustment where necessary to avoid steep approach grades. As discussed we intend to conduct joint diagnostic studies with the ICC and UP of all grade crossings in the corridor to identify necessary improvements.

Thank you again for your comments. We look forward to working with you and your staff in developing detailed plans for the project and in the implementation of the State's High Speed Rail program

Sincerely,

Mr. George Weber, Chief
Bureau of Railroads
Illinois Department of Transportation
100 West Randolph Street – Suite 6-600
Chicago, IL 60601

Dear Mr. Weber:

This letter is in response to your correspondence of April 30, 2010 to Director Douglas P. Scott of the Illinois Environmental Protection Agency (Illinois EPA) regarding the proposed Categorical Exclusion for the Union Pacific Railroad's new siding project in southwestern Will County, Illinois. The Illinois EPA supports the construction of the new siding as it would appear to improve train on-time performance, resulting in more efficient rail service and reductions of fuel usage and locomotive emissions.

As the proposed project is located within the boundaries of the Northeastern Illinois 8-hour ozone and fine particulate matter (PM_{2.5}) nonattainment area, we request the Illinois Department of Transportation take steps to minimize diesel emissions during construction. The Illinois EPA requests that the construction specifications require the use of either later-model construction equipment meeting the more stringent Tier 3 emissions standards or equipment that has been retrofitted with diesel oxidation catalysts or particulate filters. We also request that, to the greatest extent possible, idling of construction equipment be minimized when not in use. The Illinois EPA would also like an opportunity to review the draft Categorical Exclusion document

If you have any questions, please contact Mike Rogers at (217) 524-4408.

Sincerely,

Laurel L. Kroack, Chief
Bureau of Air

Re: Categorical Exclusion
Union Pacific Railroad's New Siding Project
from Braidwood (MP 58.26) to Braceville (MP 60.44), IL

Dear Ms. Kroack:

Thank you for your letter dated May 12, 2010 in response to my letter of April 30, 2010 requesting comments from the Illinois Environmental Protection Agency. We will incorporate your comments regarding the emissions of construction equipment and your support for the project into the Categorical Exclusion document. Also, we will send you a copy of the Categorical Exclusion for your review and comment.

If you have any questions about the project, please do not hesitate to contact me at (312) 793-4222, or by email at george.weber@Illinois.gov.

The Illinois Department of Transportation thanks you for your interest in this project.

Sincerely,

A handwritten signature in black ink, appearing to read 'George Weber'.

Subject: Categorical Exclusion
Union Pacific Railroad's New Siding Project
Braidwood to Braceville, Illinois

Dear Mr. Weber:

Thank you for coordinating with the Federal Highway Administration (FHWA) regarding the proposed improvements to the Union Pacific Railroad and seeking our comments. We have reviewed the materials you submitted to us and we have concluded FHWA involvement in the proposed project is not warranted because the Interstate system will not be affected by the project. We do not anticipate this project will require an agency action by FHWA and we are not aware of any potential impacts to FHWA projects or programs that may result from the proposed project. Therefore, we do not need to review the Categorical Exclusion for this project.

Please contact me via email at (Matt.Fuller@dot.gov), if project circumstances change that would warrant our involvement.

Sincerely,

Matt Fuller
Environmental Programs Engineer

Dear Mr. Weber,

Subject: Categorical Exclusion
Union Pacific Railroad's New Siding
Project from Braidwood to Braceville,
Illinois

This letter is in response to your April 30, 2010 correspondence regarding the above subject. This Department has no positive or negative comment regarding the project as it does not cross any highways under the jurisdiction of this Department.

If there are any questions, please feel free to contact me.

Sincerely,

Bruce D. Gould, PE
County Engineer

Notes:

- Culvert and bridge evaluation based on UPRR preliminary straight-line track plans for the Joliet to Dwight dated 3-30-11 between MP36.7 and 72.81.
- Proposed culvert and bridge work would include replacement, reconstruction, or rehabilitation of an existing railroad bridge, including a culvert, that does not require the acquisition of a significant amount of right-of-way.
- Undetermined = culvert and bridge environmental evaluation to be performed pending final UPRR track and construction plans.
- Medium = based on field evaluation and environmental analysis in Chapter 3 for structures at MP 38.8, MP 42.6 and MP 44.4.
- Low = structures are categorized as projects that would require environmental remediation through improvements to existing railroad track for purpose of preventing or correcting environmental pollution of soil, air or water.

Subject: Illinois DOT Chicago-Dwight High-Speed Rail Fuel and Energy Consumption
Based on Train Performance Calculator (TPC) Output

This memorandum summarizes results of fuel consumption calculations performed with the assumed operating conditions and train consists for the proposed Chicago-Dwight High-Speed Rail service. These results were developed with the Train Performance Calculator (TPC) that is part of the Berkeley Simulation Rail Traffic Controller (RTC) with energy estimates based on fuel consumption.

Methodology

The fuel consumption calculated for this analysis is based on the Train Performance Calculator (TPC) calculation performed on Rail Traffic Controller (RTC), a railroad operations simulation model widely used in operations planning and assessments in the railroad industry. The TPC within the RTC model is capable of simulating a train engineers' locomotive and train handling, as well as operating speed. The result is a prediction of the total amount of fuel consumed based on given train consists and track conditions. In order to obtain the fuel consumption range while addressing vertical curvature profile characteristics of the track segment used for this analysis, the TPC was performed for operations in both direction.

In this analysis, fuel consumption for two different passenger train consists in two different maximum operating speeds were computed in gallons of fuel consumed and then converted to energy consumed in kilo-watt per hour (kwh) based on the calculated fuel consumption. This is necessary since the TPC feature in the RTC model is not capable of calculating energy consumption of diesel locomotives or trains in kwh.

Details of these train consists, track profiles, and conversion calculations used in this analysis are described in the next section.

Assumptions

Train Consists

Two types of train consists are used in this analysis. These consists are based on off-the-shelf fleet models currently in use for passenger rail operations at similar maximum speeds for the existing Amtrak Lincoln Service trains operated between Chicago, IL and St. Louis, MS through the study area in which this analysis focused.

- 4-Car Train: One General Electric (GE) P-42 “Genesis” locomotives (4250 HP output) hauling 4 Amfleet I passenger coach cars (58 short tons per each car: total weight of 232 short tons)
- 6-Car Train: One General Electric (GE) P-42 “Genesis” locomotives (4250 HP output) hauling 6 Amfleet I passenger coach cars (58 short tons per each car: total weight of 348 short tons)

Track Profiles

A track profile with physical track characteristics identical to Amtrak San Joaquin corridor between Control Point (CP) Kismet on the BNSF Stockton Subdivision (approximately 5 miles east of the Madera Amtrak Station) and Corcoran Amtrak Station on the Bakersfield Subdivision was used for this analysis. This profile was selected because of these three characteristics:

- Similar distance (73.6 route miles for the San Joaquin corridor and 72.8 route miles for the Chicago-Dwight High-Speed Rail corridor)
- Similar grade characteristics (actual grade range of -0.30% to +0.30% in the San Joaquin corridor)
- Same number of passenger stations between the origin and destination and similar intervals between passenger stations (Fresno and Hanford compared to Summit and Joliet in existing Amtrak Lincoln Service)

For the purpose of this analysis, no speed restrictions were assumed to exist within the study area.

It should be noted that sections of tracks used in analysis were from an existing rail corridor. While a special test track could be created and used for this analysis, sections from actual or future rail corridor were selected since these includes a wide variety of track characteristics, especially variable vertical curvatures. TPC calculations based on such condition would reflect the train performance in real railroad operations more accurately compared to those calculated on artificial test tracks in the simulation model.

Operations

Based on the current project objective, the maximum authorized speed of the corridor was assumed to be increased to Federal Railroad Administration (FRA) Class 6 (110 MPH). However, in order to assess the fuel and energy consumption impacts of the high-speed rail operations, the same calculations were also performed for the current maximum authorized speed on the Chicago-Dwight segment of the Lincoln Service (79 MPH or FRA Class 4). The analysis for the conventional rail operations was intended to attain the control data for comparison against the proposed high-speed rail operations.

In this analysis, the future high-speed trains were assumed to stop at all existing intermediate stations served by current Amtrak Lincoln Service trains. These stops and mileposts written on the Amtrak timetable are Summit (Milepost 12) and Joliet (Milepost 37).

Energy Consumption

As briefly mentioned in the methodology section, outputs from RTC needs to be manually converted based on the calculated fuel consumption. In this analysis, following 2 conversion factors were used.

- 13.92 kWh per gallon, based on the freight rail operations by BNSF Railway
- 15.5 kWh per gallon, based on EPA domestic rail energy consumption standard (20.8 brake-horsepower per gallon)

Results

Fuel consumption of each of assumed train consists in 79 MPH operations and 110 MPH operations are summarized in Table 1. The results show that while trains at conventional rail speed consume 52 to 74 gallons of fuel, trains at proposed high-speed rail speed consume 112 to 137 gallons of fuel in 73-mile operations in relatively flat corridor. This means that trains in 110 MPH operations would consume around twice of fuel compared to one in 79 MPH operations. However, the difference in the fuel consumption of 6-car trains in different maximum operations speeds appeared to be smaller compared to that for 4-car trains.

Table 1 - TPC Fuel Consumption Calculation

Length - Speed	Fuel Consumed (gallon)	
	Eastbound (Kismet to Corcoran)	Westbound (Corcoran to Kismet)
79 MPH - 4 Cars	52.21	55.12
79 MPH - 6 Cars	71.16	74.89
110 MPH - 4 Cars	112.45	115.33
110 MPH - 6 Cars	135.74	137.26
<i>Difference - 4 Cars</i>	<i>60.24 (+115%)</i>	<i>60.21 (+109%)</i>
<i>Difference - 6 Cars</i>	<i>64.58 (+91%)</i>	<i>62.37 (+83%)</i>

The same trend is seen in energy consumption as summarized in Table 2. Whereas 79 MPH operations could be accomplished between 720 and 1,160 kWh, 1,570 to 2,130 kWh of energy would be consumed in 110 MPH operations based on the conversion calculation. When compared, the model predicts that 110 MPH operations would consume almost twice as much energy as 79 MPH operations. This difference is primarily attributable to increasing wind resistance as a function of speed.

Table 2 - Energy Consumption Based on TPC Fuel Consumption Calculations

Length - Speed	Energy Consumption (BNSF Standard: kWh)		Energy Consumption (EPA Standard: kWh)	
	Eastbound (Kismet to Corcoran)	Westbound (Corcoran to Kismet)	Eastbound (Kismet to Corcoran)	Westbound (Corcoran to Kismet)
79 MPH - 4 Cars	726.76	767.27	809.26	854.36
79 MPH - 6 Cars	990.55	1,042.47	1,102.98	1,160.80
110 MPH - 4 Cars	1,565.30	1,605.39	1,742.98	1,787.62
110 MPH - 6 Cars	1,889.50	1,910.66	2,103.97	2,127.53
<i>Difference - 4 Cars</i>	838.54	838.12	933.72	933.26
<i>Difference - 6 Cars</i>	898.95	868.19	1000.99	966.74

PROJECT LEVEL COST

	CONTINGENCY		20	%	388,740	383,664	772,405
Sub-Total =					388,740	383,664	772,405

Totals = 2,332,441 2,301,986 4,634,428

Grand Total = \$4,634,428

This is a "Shotgun" estimate, intended to provide a ballpark cost to determine whether a proposed project warrants further study. This estimate is not to be used for budget authority. This estimate is based on a conceptual design, without detailed engineering or site investigation. Quantities and costs are estimated using readily available information and experience with similar projects. Site conditions and changes in project scope and design may result in significant cost variance.

Estimate does not include any station platform work at UD Tower. This is a "Shotgun" estimate, intended to provide a ballpark cost to determine whether a proposed project warrants further study. This estimate is not to be used for budget authority. This estimate is based on a conceptual design, without detailed engineering or site investigation. Quantities and costs are estimated using readily available information and experience with similar projects. Site conditions and changes in project scope and design may result in significant cost variance.

Joliet Track and Signal Concept Plan (upload #34)

PRELIMINARY CONCEPTUAL TRACK AND SIGNAL DESIGN

The Metra Heritage Corridor and Amtrak rail passenger services, including the proposed high speed rail service will be accommodated on a new platform located between Union Pacific south bound and north bound tracks 3 and 4. (see Proposed Rail Passenger Platform Relocation graphics on next page). The new 9 car (735 foot) platform would be accessed on its south end by a passageway connecting to the new passenger concourse. Stairs and an elevator at that end will provide access to the platform level. Exit stairs would be provided at Jefferson Street and Van Buren Street. Exit stairs, an elevator, and accessible ramp will be provided at Clinton Street.

The Rock Island District Line boarding and alighting functions will move from the current location west of the interlocking (rail intersection) to a new proposed 10 car (1020') platform directly east of the interlocking with direct access to the east end of the new passenger concourse. An additional track would also need to be added south along the existing Rock Island District track from Joliet Union Yard to the connecting track to not impede the operations of the Heritage Corridor trains when the Rock Island District trains are stopped at the relocated platform.

Major Programmatic Elements:

- Add new 2nd Union Pacific bypass track east of interlocking, to connect the spur line to the existing RID track from Joliet Union Yard to the connecting track, to not impede the operations of the HC trains when the RID trains are stopped at the relocated platform
- Construct New Metra Rock Island District Platform Northeast of the interlocking (rail intersection).
- Provide new concourse/platform access below interlocking (rail intersection) to proposed Heritage Corridor Platform Alignment.
- Construct New Heritage Corridor Platform between Union Pacific tracks 3 and 4 with all required access to Concourse Level
- Provide new Union Station Services Access through Rock Island District Embankment.
- Add utility service and underground work for Transportation Center

SUPPORTING DOCUMENTS

The following documents were prepared as part of this Project. Copies of these documents are available upon request.

- Corridor Improvement Program - Construction Agreements between IDOT and UPRR – July 16, 2010 and March 4, 2011
- Corridor Improvement Program – Statement of Work
- Corridor Improvement Program – Financial Plan
- Chicago to St. Louis - Quality Assurance Manual
- Chicago to St. Louis - Draft Environmental Impact Statement – June 2000
- Chicago to St. Louis - Final Environmental Impact Statement – January 2003
- Chicago to St. Louis - Record of Decision - 01/08/2004

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

1. INTRODUCTION

While the IL-Chicago-St. Louis Corridor Supplement Application and the IL-Chicago-St. Louis Corridor Supplement – SDP Application are independent projects, the management of these projects can rely upon the principles of the program management plan (PMP) of the Chicago-St. Louis corridor improvement program. IDOT recognizes that not all elements of the PMP are applicable to the IL-Chicago-St. Louis Corridor Supplement Application and the IL-Chicago-St. Louis Corridor Supplement – SDP Application. Nonetheless, the general principles of planning, monitoring and implementing a project apply. IDOT will use those sections of the PMP from the Corridor Improvement Program PMP and apply them to the IL-Chicago-St. Louis Corridor Supplement Application and the IL-Chicago-St. Louis Corridor Supplement – SDP Application.

Program Management of large-scale projects, such as the transformation of the Chicago-St. Louis (ChiSL) Corridor (“Corridor”) into a high-capacity, high-speed mixed-use corridor, requires resources, skills and experience in the organization and delivery of efforts of similar scope and scale. The Illinois Department of Transportation (IDOT), and its partner Union Pacific Railroad (UPRR), are highly experienced in the delivery of major transportation programs. Unlike many states departments of transportation, IDOT also has experience delivering rail programs. However, because of the complexity and wide scope of needs, a Program Management Consultant (PMC, sometimes referred to herein as “we”) has been engaged by IDOT to augment the public agency, rail carrier and regulatory agency’s forces, and is employed for the Chicago – St. Louis corridor program.

The Chicago-St. Louis 110 mph high speed rail package of improvements (hereafter referred to as **Corridor Improvement Program**) will strategically make investments in the rail Corridor that will aid in upgrading the passenger rail system (e.g., new rail, trains, signals, crossings, etc.), leading to a reduction in travel time, an increase in air quality and service reliability for both passenger and freight trains, as well as better connectivity between two strong population centers in the Midwest.

1.1 Project Management Plan (PMP) Overview

This document is intended to provide the approach for ensuring successful implementation of Corridor Improvement Program. It fulfills the requirements of the Federal Railroad Administration (FRA) for funding under the American Recovery and Reinvestment Act of 2009 (ARRA) High Speed Intercity Passenger Rail Program (HSIRP). The required elements of the PMP per 49 U.S.C. 24403(a) are listed in the table below. This table also indicates the applicable section(s) of the PMP where each element is addressed.

This Program Management Plan (“PMP”) is based on experience gained in the organization and delivery of prior, similar projects including the Taiwan high speed rail project and other intercity passenger rail improvement programs in the US. This is a dynamic document that will be updated periodically to include the future projects that are also a part of the overall Chicago – St. Louis HSIPR Program.

This PMP is a living document. IDOT will review and update the Management Plan on an annual basis, or more frequently as needed. In order to maximize our effectiveness in

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

managing the project and meet project goals, the Project Management Plan will be continuously evaluated and revised as the project progresses.

IDOT fully endorses this Project Management Plan and is committed to achieving the goals and objectives set forth herein. Specifically, IDOT is committed to periodically submitting Program budget and schedule information to the US Secretary of Transportation (see Section 3.6.1 for reporting requirements).

PMP Requirements	
Statutory Requirements	Applicable Chapter
Adequate Staff organization with reporting relationships, responsibilities, job descriptions and qualifications.	Section 2.1
Budget covering the project management organization, appropriate consultants, property acquisition, utility relocation, systems demonstration staff, audits, and miscellaneous payments the recipient may be prepared to justify.	Section 1.4. See Project Financial Plan for additional detail
Construction schedule for the Project.	Attached as Appendix A
Document control procedure and recordkeeping system.	Section 2.5
Change order procedure that includes a documented, systematic approach to handling the construction change orders.	Section 4.7
Organizational structures, management skills, and staffing levels required throughout the construction phase.	Section 2.1.2
Quality control and quality assurance functions, procedures, and responsibilities for construction, system installation, and integration of system components.	Chapter 6
Material testing policies and procedures.	Section 6.3.2
Internal plan implementation and reporting requirements.	Section 3.6
Criteria and procedures to be used for testing the operational system or its major components.	Chapter 10
Periodic updates of the plan, especially related to project budget and project schedule, financing, and ridership estimates.	Section 1.1
Recipient's commitment to submit periodically a project budget and project schedule to the Secretary.	Sections 1.1 & 3.6

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

1.2 Program Management Consultant (PMC) Overview

The role of the PMC is to manage the program implementation including the wide-range of interdependencies between standards, designs and programs that comprise the overall program. The Team coordinates those elements of the program that are common to the management; organization; finance; risk assumption; as well as standards of communication, methods, technology and quality that are required to successfully develop and provide the fixed facilities, rolling stock and transportation services envisioned. The PMC provides either direct management or management oversight to accomplish the goals of the program.

The Chicago-St. Louis Corridor PMC serves as the Owner's Representative in the execution of the program. The Team is integrated with staff from IDOT, consultants, and other program partners. For a program of this size, with the broad range of disciplines and stakeholders involved, key personnel from IDOT, Amtrak and UPRR have or will be temporarily assigned to work with the PMC, to ensure that input, review and coordination activities are expedited. These agency and carrier personnel will work hand-in-hand with the consultants that make up the PMC throughout the duration of the program. The PMC will define the roles and responsibilities within the program and would be responsible for the overall integrity and coherence of the program.

1.3 Corridor Improvement Program Description

The Grantee will perform, or cause to perform, Final Design ("FD") and Construction in support of the renovation of track between Dwight and Lincoln and between Godfrey and the East St. Louis, Illinois area ("Project"). IDOT and UPRR will enter into a construction agreement covering the subject work ("Agreement"). The Project involves the renovation of approximately 118.89 miles of first main track and 39.44 miles of second main track and/or sidings, including replacement of track, turnouts, road crossings and curves. Work over the remainder of the 208 total miles of the Corridor Improvement Program was conducted as part of the 2010 TRT Project and Advance Program Work. The Project location is depicted in Figure 1.1 - Project Location Map.

1.3.1 Corridor Improvement Program Schedule

The Corridor Improvement Program schedule is contained in Appendix A of the PMP and will be revised over the course of the project. Generally, construction activities will occur from the fourth quarter of 2010 through 2014. The project segment from Dwight to Pontiac is scheduled for 110 mph operation in 2012 using existing rolling stock that has been modified and rehabilitated for 110 mph operation. The remainder of the corridor is scheduled for up to 110 mph operations by 2015.

The schedule for the IL-Chicago-St. Louis Corridor Supplement Application and the IL-Chicago-St. Louis Corridor Supplement – SDP Application is 55 months, beginning in January, 2011.

1.3.2 Corridor Improvement Program Limits

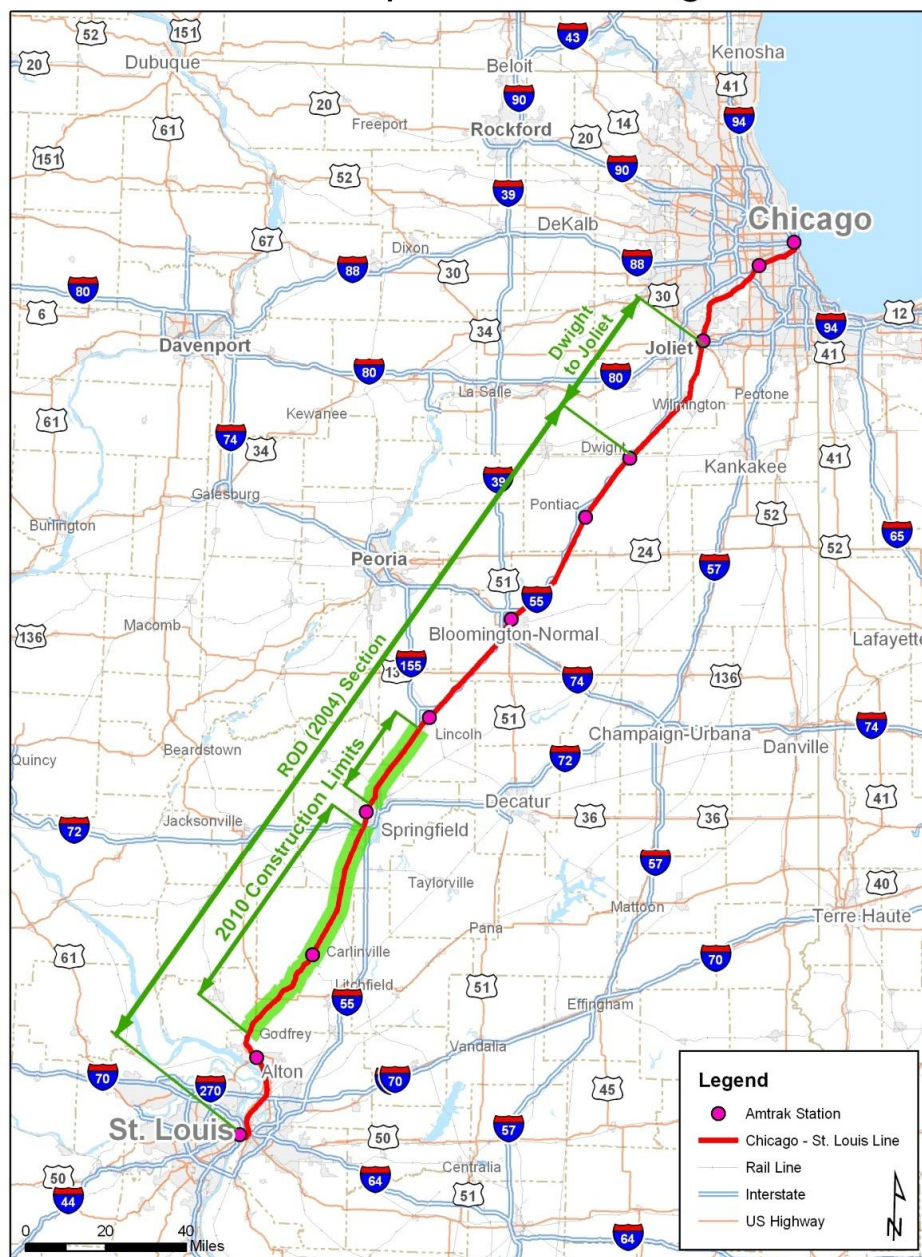

The limits for the IL-Chicago-St. Louis Corridor Supplement Application and the IL-Chicago-St. Louis Corridor Supplement – SDP Application include the entire Corridor. The map describing the entire Corridor is set forth below in Figure 1.1. Per the Agreement between IDOT and UPRR, the work will be performed entirely in the State of Illinois within the UPRR Springfield and Joliet Subdivisions.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Additional information regarding specific project limits for the IL-Chicago-St. Louis Corridor Supplement Application and the IL-Chicago-St. Louis Corridor Supplement – SDP Application is provided in Section 1.1.3 below.

Figure 1.1

Chicago - St. Louis High Speed Rail Corridor Improvement Program

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

1.3.3 Corridor Improvement Program Scope

The current April 4, 2011 FRA Funding Application for which this Service Development Plan supports is intended to provide for additional funding to support track, grade crossing, signal and other upgrades in the Corridor that build upon the work performed within the Cooperative Agreement. The proposed additional work is collectively termed the IL-Chicago-St. Louis Corridor Supplement Application and the IL-Chicago-St. Louis Corridor Supplement – SDP Application (“Supplemental Projects”). The Supplemental Projects will further support high speed rail service within the Chicago-St. Louis Corridor, but are beyond the scope of the work currently approved within the existing Cooperative Agreement.

The Supplemental Projects include six tasks which are designed to enhance the ROD package of improvements previously approved by the FRA:

- Task 1 – Siding and Extended Main Track
- Task 2 – Track Upgrades
- Task 3 – PTC
- Task 4 – Private and Farm Crossings
- Task 5 – ROD Study
- Task 6 – Program Management and Construction Administration

Supplemental Projects Tasks 1, 2, 3, 4 and 5 are each distinct projects in that each Task can be performed independently of other Tasks. Each of these tasks will provide a benefit to the development and improvement of rail service within the Chicago-St. Louis Corridor. However, each task also complements the other tasks, resulting in an additive effect for improvements to the Chicago-St. Louis Corridor rail service. Task 6 is required to provide for program support to enable successful completion of Tasks 1-5.

The Supplemental Projects Tasks include the following work:

Task 1 – Passenger Siding and Main

Task 1 provides for track improvements within the Corridor by constructing a new 2.1-mile passing siding near Mazonia, Illinois (between MP 55.00 and 57.13), and the construction of 7.9 miles of extended second main track between Elwood and Joliet, Illinois (between MP 36.80 and MP 44.69). The new siding and second main will be equipped with Centralized Traffic Control (CTC) signaling as part of this task. These improvements will increase operational flexibility for both passenger and freight operations, reduce the potential for train delays, and enhance train operational safety.

The work to be performed within Task 1 includes potential refinement preliminary engineering (PE)/National Environmental Policy Act (NEPA), final design (FD), and construction of railroad upgrades between Dwight and Joliet.

Figure 1.2 at the end of this section provides a map of the locations of the proposed Supplemental Project Task 1 – Passenger Siding and Main.

Task 2 – Track Upgrades

This task includes upgrades of the existing main track. The 2010 Grant statement of work stated that IDOT will perform a limited set of improvements (i.e., not all improvements) for the Corridor area from MP 42.80 to MP 72.80. The statement of work never contemplated that all first main track upgrades from MP 42.80 to MP 72.80 would be constructed with the 2010 Grant funds; nor did it contemplate any improvements from MP 36.70 to MP 42.80.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Upon receipt of revised estimates from the Union Pacific Railroad (UPRR), IDOT has determined that the 2010 Grant funds will allow some of the upgrades between MP 54.00 and MP 72.80 to be completed. Consequently, this application seeks funding for the completion of first main track upgrades between MP 54.00 and MP 72.80 and for full main track upgrades on the remainder of the Corridor from MP 36.70 to MP 54.00, between approximately Wilmington and Joliet IL.

Completing this task will allow track readiness for increased speeds up to 110 mph operation between approximately Dwight and Joliet IL, thus reducing passenger train running time in this segment of the Corridor.

Figure 1.3 at the end of this section provides a map of the location of the proposed Supplemental Project Task 2 – Track Upgrades.

Task 3 – PTC

The 2010 Grant includes funds for Positive Train Control (PTC) improvements from MP 72.80 to MP 281.00. Task 3 consists of equipping the existing and proposed tracks with PTC between Dwight and Joliet, IL (approximately 37 miles from MP 36.70 to MP 72.80).

Implementation of a state-of-the-art signal and communications system is integral to the implementation of 110 MPH operations. Improved signaling will increase track throughput and raise the efficiency, productivity and safety of the track as well as meet regulatory requirements that will soon take effect. On 110 MPH rail, overlay of state-of-the-art signal and communications system on the existing signal system is required. A state-of-the-art system is necessary to coordinate freight and passenger operations and permit joint service to share the same track.

Subject to acceptance by the FRA and freight railroads, it is assumed that PTC system technology will be applied to all routes with speeds over 80 MPH during this phase. PTC provides for a higher level of train protection from collisions with other trains than is possible with conventional wayside and/or train cab signaling systems.

PTC is proposed to be installed in the Dwight to Joliet segment to complement the track upgrades proposed under Task 2 and will provide consistency with other sections of the Corridor that will receive PTC under the current Cooperative Agreement.

Figure 1.4 at the end of this section provides a map of the location of the proposed Supplemental Project Task 3 – PTC.

Task 4 – Private and Farm Crossings

The 2010 Grant for the HSIPR funds a dual gate crossing system at private crossings from Dwight to the East St. Louis area. After a study by the Corridor stakeholders and input from the Federal Railroad Administration (FRA), a conclusion was reached that 4-quadrant gates were more appropriate for private crossings at the 2010 Grant funded locations. This application seeks additional funding to achieve a 4-quadrant gate system at private crossings from Dwight to the East St. Louis area. It also seeks funding for extra control enhancements in the farm crossing system which was not included in the 2010 Grant. The field diagnostic process and subsequent collaborative design review work allowed stakeholders to refine the designated equipment for the farm crossings. The refined design would add farmer control panel and vehicle detection loops at each farm crossing. This will enhance the safety of the crossings, but is over and above what was included in the 2009 HSIPR funding application.

The 2010 Grant did not provide funds for private and farm crossings between Dwight and Joliet.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Under Task #4, a 4-quadrant gate system (for private crossings) and farmer control panels and vehicle detection loops (for farm crossings) would be procured and installed from Dwight north to Joliet. The private and farm crossing improvements will increase safety on the Corridor for train crews and passengers as well as for area residents. Figures 1.5 and 1.6 at the end of this section provide maps of the locations of the proposed Supplemental Project Task 4 – Private and Farm Crossings.

Task 5 – ROD Study

Task 5 involves conducting a lessons learned study on the ROD and related IDOT-funded high speed rail projects by RTEC/University of Illinois at Urbana-Champaign. The ROD Study will be performed to consider the three phases major phases of the Corridor Improvement Program, including:

- Phase I – Planning, to document the efforts involving service development (feasibility studies), financial, environmental and program management.
- Phase II – Design and Construction, involving a review of the process used to design, procure and construct the major capital improvement elements of the project, including trackwork, trainsets, signaling, grade crossings and stations.
- Phase III – Operations, to evaluate the resulting 110 mph high speed rail service in terms of ridership, scheduling, fare structures, railroad/operator coordination, agency coordination, documentation of initial operations and economics.

The results of this study are anticipated to provide for guidance that may result in improvements in the overall technical and administrative functions with the on-going Corridor Program, as well as providing guidance for HSR development throughout the Midwest region and the U.S. Figure 1.7 at the end of this section provides a map of the location of the proposed Supplemental Project Task 5 – ROD Study.

Task 6 - Program Management & Construction Administration

This task will provide for the program management, oversight, construction administration and quality control/quality assurance activities required to support the efforts of Tasks 1-5.

1.4 Corridor Improvement Program Costs

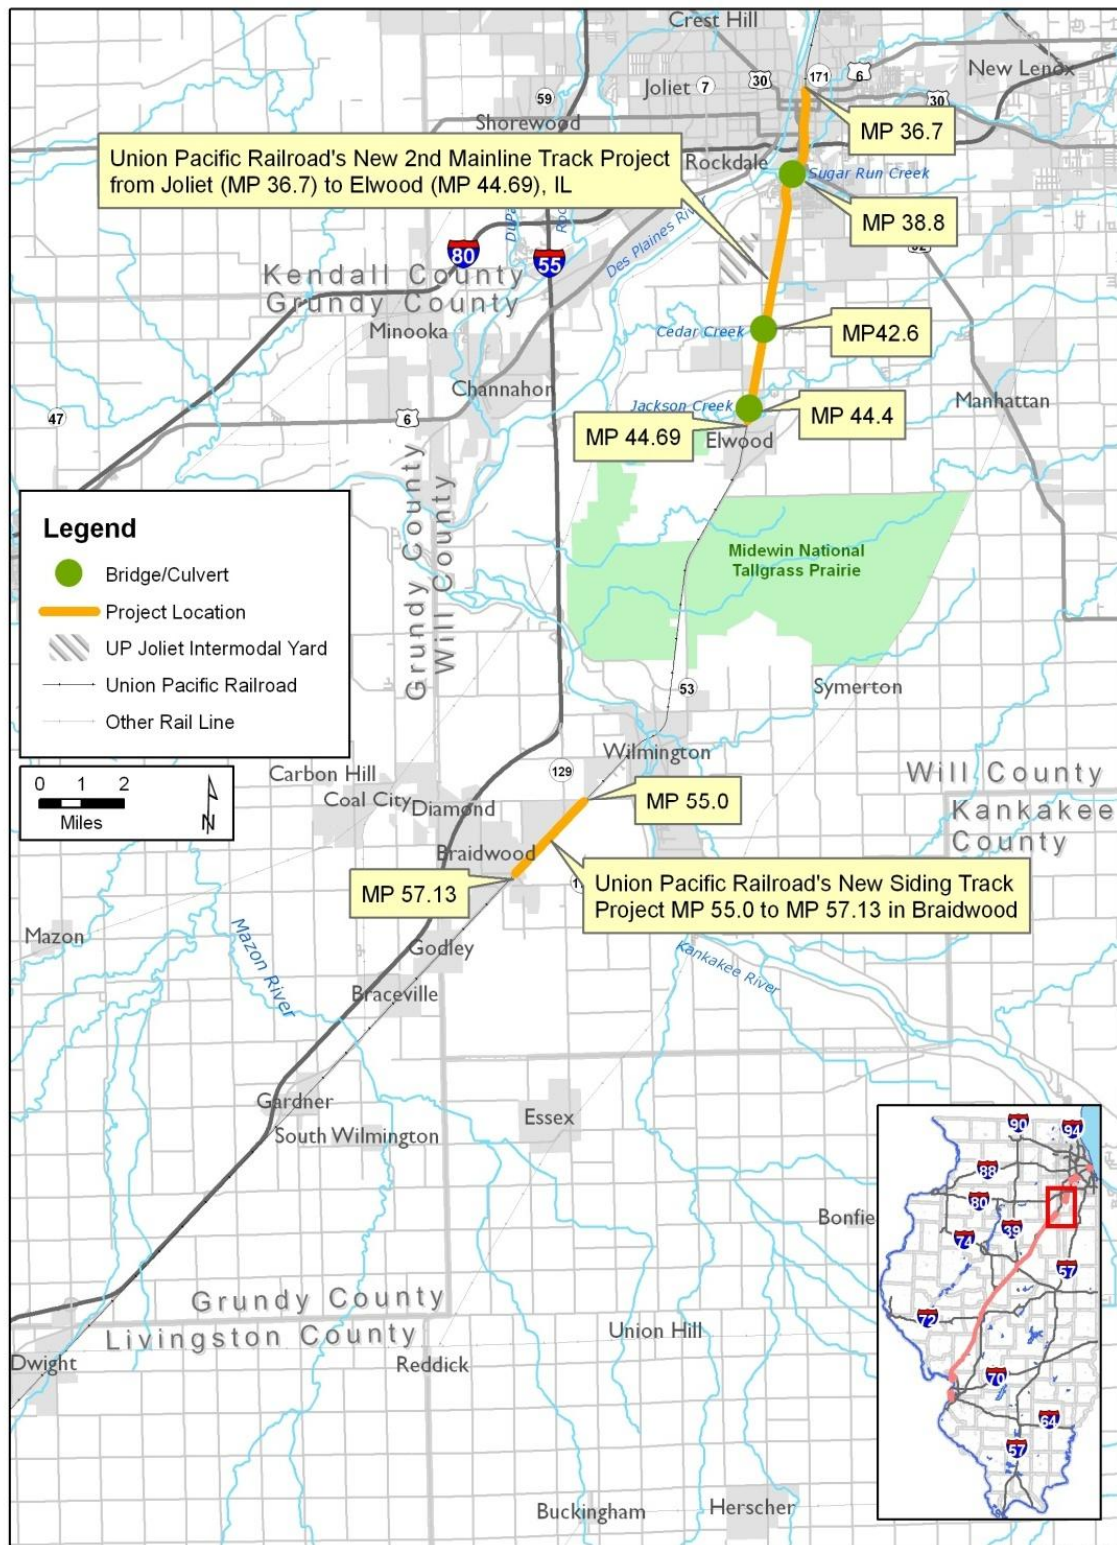

The larger Corridor improvement program to which this application supplements, is estimated to require an investment of \$1.202 billion. The total estimated amount for the Supplemental Project tasks to the larger program is projected at \$248.5 million in 2011 dollars, as shown in Table 3-1.

Table 3.1 – Supplemental Projects Total Projected Costs (2011 Dollars)

IL-Chicago-St. Louis Corridor Supplement Program Tasks	Task Cost
Task 1 – Passenger Siding and Main	\$ 102.4 million
Task 2 – Track Upgrades	\$ 76.2 million
Task 3 – PTC	\$ 6.5 million
Task 4 – Private and Farm Crossings	\$ 23 million
Task 5 – ROD Study	\$ 0.9 million
Task 6 – Program Management and Construction Administration	\$ 39.5 million
TOTAL	\$ 248.5 million

2. ORGANIZATION AND PROTOCOL DEVELOPMENT

2.1 Organizational Structure

It is important that organizational roles and relationships are identified and understood by project personnel. Keeping organization chart(s) current will aid all parties concerned – IDOT, the members of the PMC and the key stakeholders (UPRR, Amtrak, FRA, ICC, etc.). The current Corridor Improvement Program organization chart is included as Figure 2.1.

Figure 2.1 – Project Organization Chart

2.1.1 Project Leadership Committee

The Project Leadership Committee includes: George Weber (Illinois Department of Transportation, Bureau Chief, Railroads), Michael Garcia, PE (Illinois Department of Transportation, Chief of Rail Engineering), Miriam Gutierrez (Illinois Department of Transportation, Rail) and Philip G. Pasterak, PE (Senior Vice President, Transit and Rail Manager – Central US, Parsons Brinckerhoff). Resumes of the Committee Members are included in Figure 2.2.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Figure 2.2 – Leadership Committee Resumes

Project Leadership Committee	
Name / Position	Background
George Weber IDOT Program Manager Bureau Chief, Bureau of Railroads Illinois Dept. of Transportation JR Thompson Center, Suite 6-600 100 West Randolph Chicago, IL 60601 Phone: 312-793-4222 Fax: 312-793-5674 George.Weber@illinois.gov	<p>George Weber is the Bureau Chief for the Illinois Department of Transportation Bureau of Railroads. He was appointed to this capacity in January 2009 after serving as Acting Bureau Chief for two years. In his current capacity, he is responsible for all state railroad programs , including rail freight assistance, rail policy, intercity passenger rail, high speed rail and the CREATE program. Mr. Weber has been with the Department since 1991 serving until his appointment as Acting Bureau Chief, as the Rail Passenger Section Chief in overseeing the State's passenger rail program. He was responsible for coordinating and managing all activities of the State's passenger rail program to encourage public use.</p> <p>Mr. Weber was primarily responsible for overseeing and managing the largest expansion of passenger rail service in the Midwest in over a decade. In early 2006, he coordinated with Amtrak the successful implementation of four more round trips on Illinois' three downstate corridors. This expansion resulted in Illinois having the second largest state-sponsored program in the US, second only to California in term of operations and funding. The corridor coalitions that George formed in the late 90's were the beginning of the grass roots movement that resulted in the eventual service expansion.</p> <p>Besides his daily duties of managing the State's Rail Programs, he also is the Illinois representative for the Midwest Regional Rail Initiative and States for Passenger Rail Coalition. He has also participated in various compacts including the Midwest High Speed Rail Compact as well as the Midwest Interstate Passenger Rail Compact. In January 2007, George was named employee of the quarter in recognition for his outstanding service to the Department. In October 2009, George was the recipient of the 2009 Award of Merit for Professional Excellence for his professional and technical excellence in Railroad Policy development and his contribution to the State's High Speed Rail Initiative.</p> <p>Prior to his working with IDOT, Mr. Weber worked for Amtrak from 1980 through 1991. He began his career with Amtrak in Chicago serving as a Trainmaster in the busy Chicago terminal until 1986 when he relocated to Albany, New York to assist in the takeover by Amtrak of the train and engine crews from the various railroads. He also served in similar operational capacities in St. Cloud, Minnesota and Denver, Colorado before accepting the position with the State of Illinois. Mr. Weber began his railroad career in 1977 with Conrail as a Block Operator before advancing to a Yardmaster's position with both Conrail and Amtrak. George was a member of the US. Army from 1969 through 1972 and completed his military stint with an 18 month tour in Vietnam.</p>

Name / Position	Background
Michael R. Garcia, PE IDOT Deputy Program Manager Chief of Rail Engineering Illinois Dept. of Transportation Bureau of Railroads, Room 339 2300 S. Dirksen Parkway 100 West Randolph Springfield, IL 62764 Phone: (217) 782-4133 Fax: (217) 524-1889 Mike.Garcia@illinois.gov	<p>Mike Garcia received his Civil Engineering Degree in 1978 from Marquette University located in Milwaukee, WI. He then began his Railroad career in Waukegan, IL for the Chicago & North Western Railroad. He held various positions including working on the Chief Engineer's staff in Chicago. He was hired by the Illinois Department of Transportation's Bureau of Railroads in 1984 as a Program Manager, four years later Mike was promoted to Chief of Rail Engineering, a title he still holds. He has been the State's chief rail engineer for projects on nearly every railroad in Illinois of all shapes and sizes, as small as a \$10,000 rail siding to as big as the proposed \$4,300,000,000 High Speed Rail project. He is currently active as the State's engineering manager for the \$1.5 billion CREATE Program in Chicago and the lead state engineer for the recently awarded 1st Phase \$1.1 billion HSIPR Chicago to St. Louis project.</p> <p>Mike is a member of American Society of Civil Engineers and is a member and past Vice President on the Board of Directors of the American Railway Engineering and Maintenance of Way Association. Michael is a Registered Professional Engineer in the states of Illinois and Wisconsin.</p>
Miriam Gutierrez IDOT Rail Program Planning Section Chief Illinois Dept. of Transportation JR Thompson Center, Suite 6-600 100 West Randolph Chicago, IL 60601 Phone: (312) 793-4803 Fax: (312)-793-1251 miriam.gutierrez@illinois.gov	<p>Miriam Gutierrez received her BA from DePaul University in Chicago. She began her career at the Cook County Office of the Chief Judge and then worked as the Latino Outreach Coordinator at Chicago 2016. As part of 2016 Chicago Olympic bid, Miriam was actively involved in engaging the community and developing campaign strategies to create awareness and support across all Chicagoland's neighborhoods, racial, ethnic, religious, business and political communities.</p> <p>At the Illinois Department of Transportation, Miriam leads public involvement and planning for Bureau of Railroads projects. She is responsible for developing strategies and legislative initiatives to increase revenues, provide fiscal control, and evaluate statewide rail service and system performance problems. Miriam is also responsible for the State Rail Plan and Rail Program. She has served in key roles in the delivery of the initial stages of the Chicago – St. Louis 110 mph high speed rail program.</p>
Philip G. Pasterak, PE Program Management Consultant Senior Vice President PB Americas, Inc. 230 W Monroe St., Suite 900 Chicago, IL 60606 Direct: (312) 803-6539 Fax: (312) 782-1684 pasterak@pbworld.com	<p>Phil Pasterak has extensive experience in the management, planning, and technical design of rail facilities. He is currently program manager for PB for the Illinois Department of Transportation's implementation of 110 mph high speed service on the Chicago-St. Louis corridor, and in various roles on passenger programs throughout the Midwest, including Ohio and Minnesota. Phil has hands-on experience in all project stages, including delivery of a precedent-setting nationwide rail signal safety program to demanding deadlines in the United Kingdom. He also played a key role in the implementation of commuter rail for the Utah Transit Authority, which opened in 2008.</p>

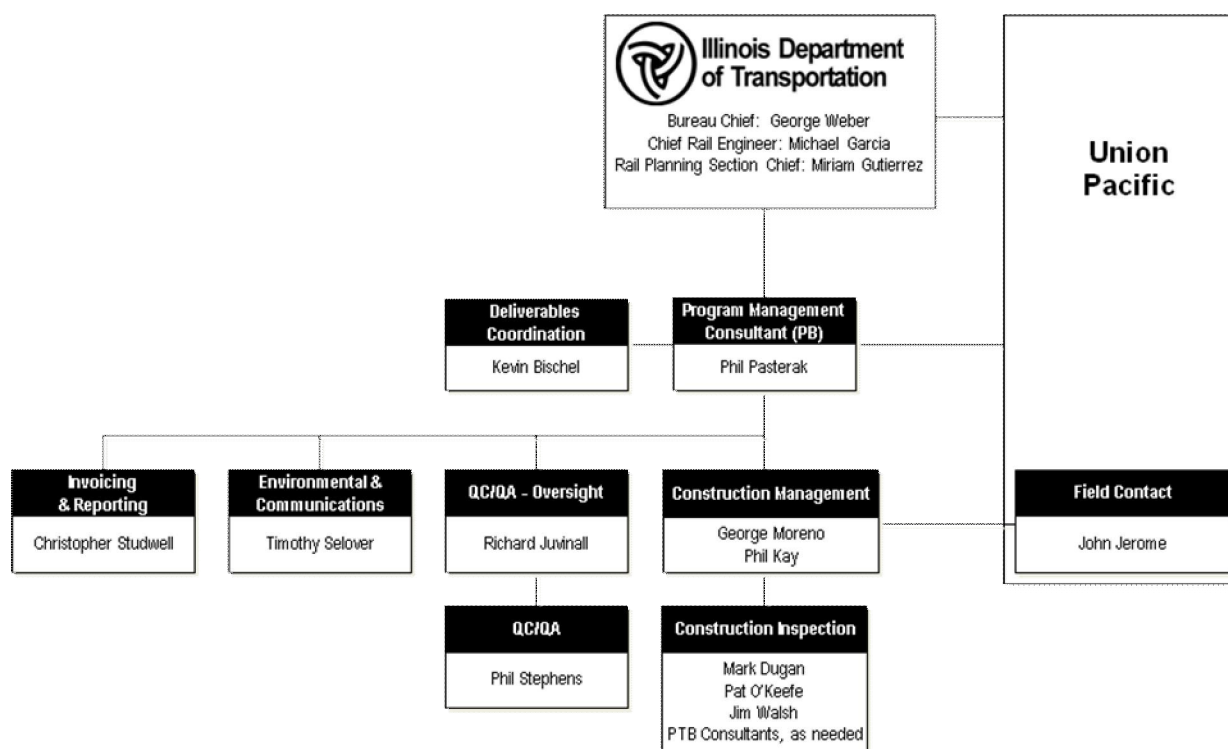

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

2.1.2 Construction / Field Work – Organization

The PMC will be providing construction oversight and inspection services of construction activities performed by UPRR and its contractors as described in PMP section 9.11. Due to the extensive amount of the Program scope and cost that is construction related, a construction / field work specific organizational chart has been included in this PMP (Figure 2.3).

The organizational chart below shows the staffing levels that were utilized for the 2010 TRT construction. It is anticipated that additional construction inspectors will be brought on as the construction level increases. In addition to the PMC staff, IDOT may add additional construction inspectors by procuring consultant services (referred to as PTB Consultants, see PMP section 4.2.1). PTB Consultants will likely be procured for road crossing and station construction inspection. The PMC will provide oversight and management of the PTB consultants.

Figure 2.3 – Construction / Field Work – Organizational Chart

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

2.2 IDOT Interface

The Illinois Department of Transportation is directed by its Secretary, Gary Hannig. He is supported by an Assistant Secretary, Chief of Staff, Chief of Operations, seven Offices (Business and Workforce Diversity, Chief Counsel, External Affairs, Finance and Administration, Governmental Affairs, Planning and Programming, and Quality Compliance and Review), and four modal Divisions (Aeronautics, Highways, Public and Intermodal Transportation, and Traffic Safety). This project will be managed by the Public and Intermodal Transportation, whose Director is Joseph Shacter. Within this Division, the Bureau Chief of Railroads is George Weber. Within this Bureau, Michael Garcia is the Chief of Rail Engineering and Miriam Gutierrez is Rail Program Planning Section Chief.

The Project will require coordination with the IDOT Division of Highways for the roadway grade crossings. The Division of Highways is divided into nine Districts which report to one of five Regional Engineers. The project is located within Districts 1, 3, 6, and 8. The project will also require coordination with Bureau of Local Roads & Streets.

Points of contact have been established between IDOT and the PMC for formal and informal contact. This is intended to establish a system of reports to the client to document progress, problems and resolutions and other issues that arise in the conduct of the Chicago-St. Louis Corridor program.

Within the Program Management Team, there will be multiple interface points between disciplines and technical areas. The summary matrix shown in Figure 2.4 was developed to summarize these interface points. Technical task force committees will be assembled as needed to address specific technical issues.

2.3 Federal Railroad Administration (FRA) & Regulatory Agency Interface

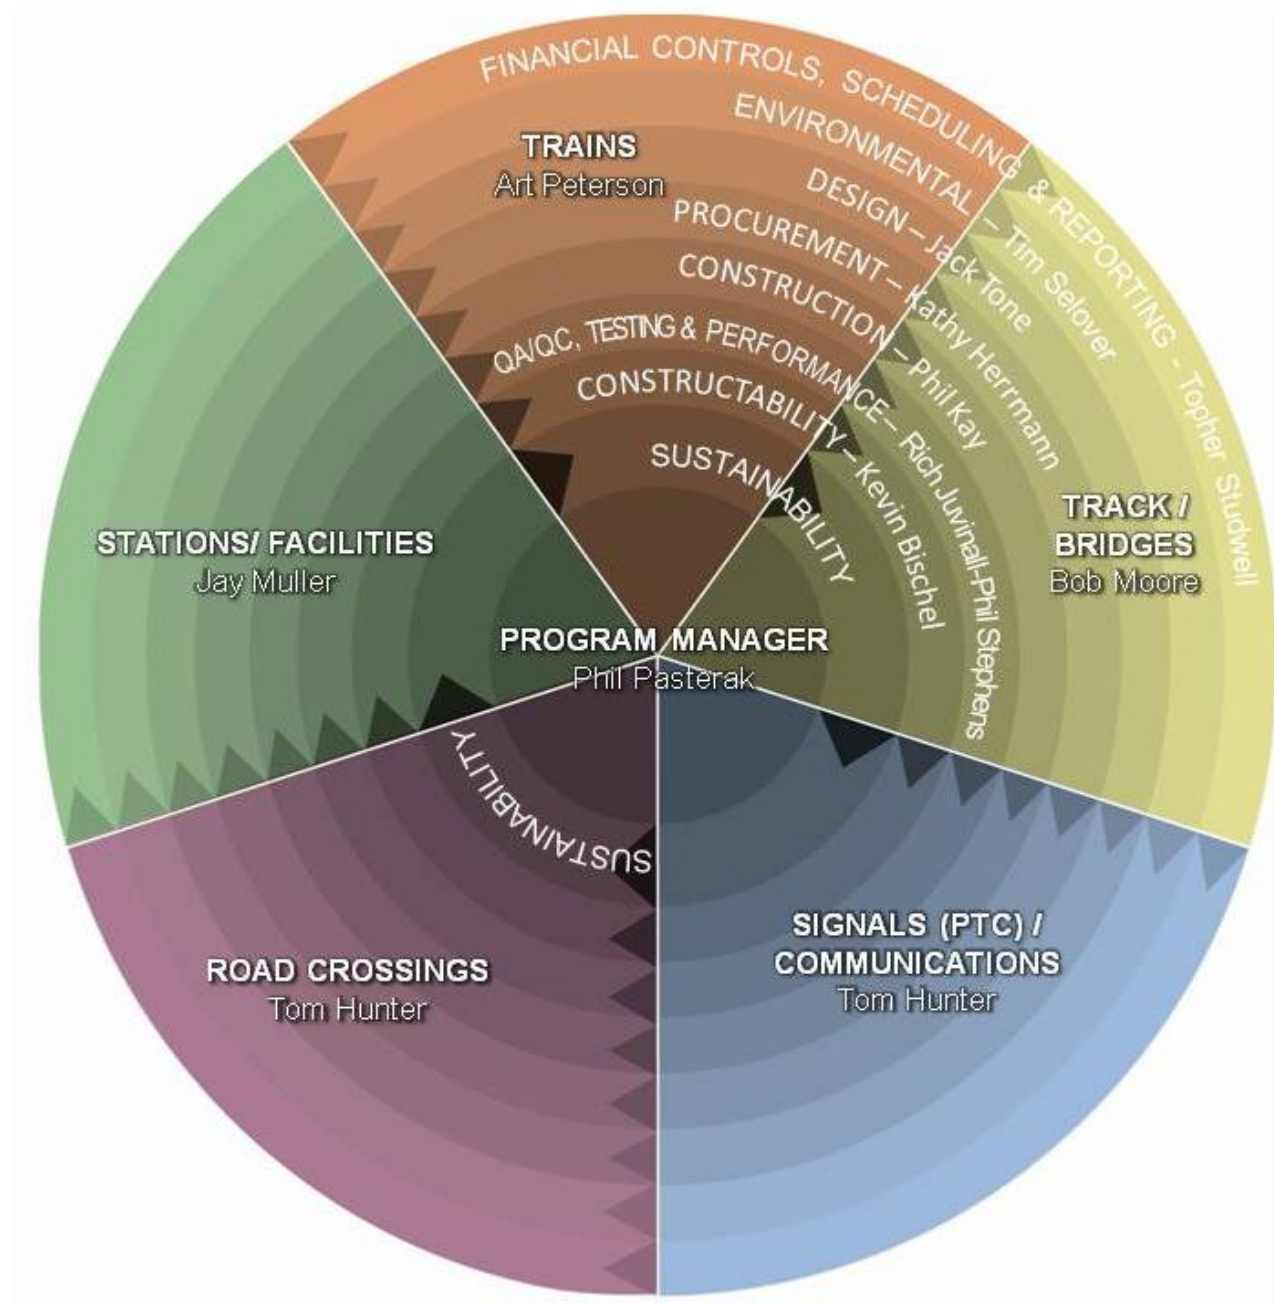

2.3.1 FRA Interface

The FRA team will conduct verification activities to ensure that the Project implementation of the FRA program conforms to established laws, regulations, and policies. Active FRA involvement will allow FRA to have confidence in the quality of the product and the Project team processes. If required, FRA will work to improve the products and processes in accordance with assessment of risk and benefit. IDOT will bring important federal issues to FRA's attention for consideration and guidance.

FRA will provide a Project Manager who will be the Agency's primary representative for overall project administration and oversight, in analyzing information concerning the status of the project, and if appropriate coordinating the review and acceptance of FRA required submissions. The FRA Grant Manager will be the primary contact on contract administration issues, including coordinating and providing status reports to FRA Headquarters. The IDOT and FRA representatives will meet bi-weekly to discuss the overall progress of the project and address outstanding issues.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Figure 2.4 – PMC Interface Matrix

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

2.3.2 Other Regulatory Agency Interface

The PMC will establish points of contact with the regulatory agencies having jurisdiction over the Program. In addition, to ensure that coordination is expedited with these agencies, the PMC will include personnel experienced in dealing with these matters, which will review applicable regulations and establish compliance standards and expectations. PMP Section 10.5 indicates regulatory approvals that are anticipated to be required for the Corridor Improvement Program.

2.4 Railroad Interfaces

In a similar context, points of contact have been established with Amtrak, UPRR, and as required, other railroads.

As noted in the preceding section, specific IDOT, Amtrak and UPRR personnel are assigned to the PMC to provide the channel for the formal contact with these carriers. Points of contact have been or will be established with each of the connecting/crossed rail lines on the corridor, which may include the CN, Metra, Belt Railway of Chicago, BNSF, CSX, Gateway Eastern, Illinois & Midland, KCS, NS and TRRA among others.

Railroad Key Contacts	
UPRR	Mark Bristol
Amtrak	Michael Franke

The Terminal Railroad Association of St. Louis ("TRRA"), Kansas City Southern Railroad ("KCS"), and Union Pacific Railroad ("UPRR") each have ownership and/or dispatching interests for the portion of the Corridor south of Alton Illinois. UPRR will act as the collective point of contact to the PMC for TRRA, KCS, and UPRR issues in the Corridor south of Alton. UPRR will obtain dispatching agreements with the TRRA and KCS (see PMP section 4.6 Railroad Agreements).

The PMC and UPRR representatives will conduct weekly conference calls to discuss the overall progress of the project and address outstanding issues.

2.5 Document Control and Management Standards

2.5.1 Document Control

The PMC is in the process of establishing the parameters of a document control system. At present, project documents and electronic reference material is maintained in the PMC member Parsons Brinckerhoff's (PB) Chicago Server in the "J Drive" under the PB Project Number 16866 – IDOT HSR Program. All email correspondence will copy the project document control staff (alonistiotis@pbworld.com) for proper filing and archiving. Hard copy documents will be filed at Parsons Brinckerhoff Chicago Office according to the Project file index.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

The file: 'J:\16866 IDOT HSR Program\0.0 File Index\16866A- CHISL PM Document File Index.doc' contains the project filing structure. The primary categories of this structure are the following:

- | | |
|-----------------------------------|-------------------------|
| 1. File Index | 6. Project Data |
| 2. Pre-Contract | 7. Project Deliverables |
| 3. Contract | 8. Project Delivery |
| 4. Financial Management | 9. Technical Work |
| 5. Correspondence & Communication | 10. Public Involvement |

Project-specific document control procedures are being developed to further define methods and location of storage and recall and will be added to this PMP when completed (anticipated December 2010). The Quality Management System will also address document control issues.

2.5.2 Document Sharing & Collaboration (ProjectSolve²)

Documents and information to be shared between firms and/or stakeholders will be transferred using PB's ProjectSolve² a web-based file sharing system. A File Sharing Protocol (ProjectSolve² & FTP) memo (dated 7/20/10) has been prepared to summarize file sharing protocol and website instructions.

Access to ProjectSolve² (PS2) is limited to the project stakeholders and is password protected. Folders within the site can be 'hidden' or made accessible only to selected individuals / groups, as needed. Initially, everyone that is part of the PMC (IDOT, PB, all subs) will be able to view/edit all folders/files on the site. Some of the technical folders will also be accessible to select stakeholders (UPRR, Amtrak, ICC and FRA). A note will be added to the top of each main folder indicating any access restrictions for that folder (and subfolders).

Please contact Kevin Bischel (bischel@pbworld.com) to obtain access. You will need to provide Name, Company/ Organization, email address. PB will determine access restrictions for the new account. The ProjectSolve² URL is:

<https://www.projectsolve2.com/eRoom/PBChicago/IDOTHSRProgramManagement>

The PS2 website provides for version control and includes a revision history. When a file is edited on the website, or a new version uploaded, the system will create a new version number for the file and create an archive version of the previous file. The system will also prompt the user to enter revision summary information that will be saved with each version.

ProjectSolve² Site Organization

The following items can be found on the entry page of the website. Figure 2.5 depicts the ProjectSolve² Site Structure.

Program Administration folder will be primarily for business and management related documents. Monthly progress meeting minutes and reports will reside here.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Technical folder will contain discipline specific data and will be organized by the rings of the 'bulls-eye' figure. In addition to the discipline folders, there is a 'Cross Discipline – Common Base Files' folder. This folder will contain data that will be used by several disciplines, such as aerial photos and quality management system files.

Data Log: This is a database that will log all of the base data that has been received and is stored on PS2. This log is not a summary of all files on PS2, but rather a summary of data received from 3rd parties. Each entry will contain a site link where the data can be found on the site.

Calendar: Calendar events will be shown here. This will include meetings and also vacations / other project commitments for the Project Team members. Links to meeting minutes and agendas will be stored within each calendar event. The actual meeting minutes files will be stored in the respective discipline folders.

Team Directory: Contact list for entire team (not just PS2 members)

Temporary Drop Box: This folder is on the site entry page and is used for quick file transfers. Everyone with access to the site will be able to access this folder. Contents of this folder will be deleted or moved/ filed by PB periodically.

Project FTP Site

Large file transfers to/from individuals that do not have access to ProjectSolve² should use the PB FTP site (<https://ftp.pbworld.com>). Information will be stored on this site for a period of 14 days after which it will automatically be deleted. Information is only accessible to those with the unique link that is emailed to recipients automatically after upload.

2.6 Communication Protocol

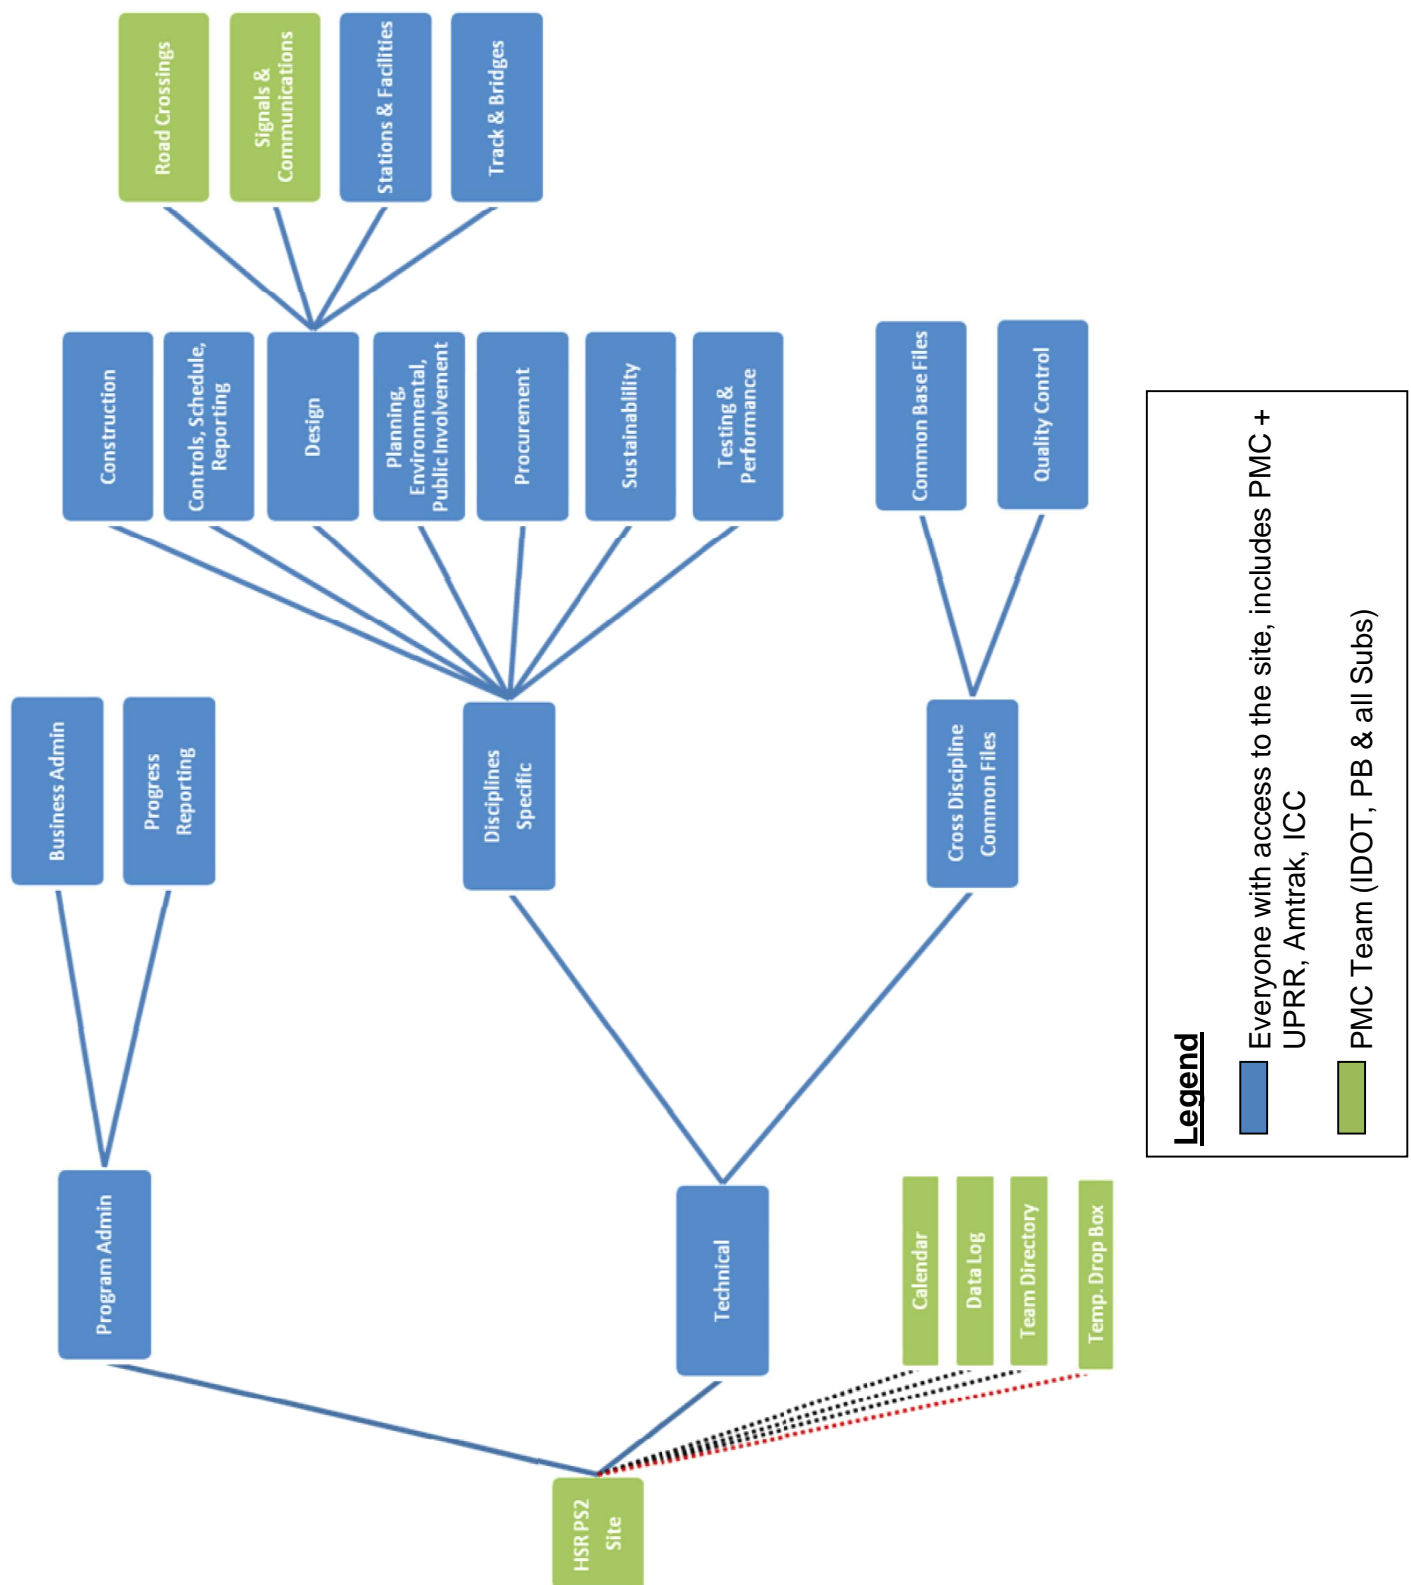

Communication between IDOT and the PMC will be primarily through the IDOT Project Manager, Michael Garcia, and the PMC lead, Philip Pasterak. Office and field communication systems are being developed to assure timely control and command of the program. Procedures are being developed to establish methods of communication acknowledgement and methods to store and recall vital program communications.

2.7 Information Technology Protocol

In conjunction with Document Management and Communications Protocol, the PMC will establish and implement an information technology system suitable to support management of the program in accordance with the standards and protocols established.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Figure 2.5 – ProjectSolve² Site Structure

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

2.8 Dispute Resolution

Methods and protocols to resolve disputes between PMC members will be developed. These methods can also be applied to disputes between the team and external entities.

A claim is an unresolved charge resulting from a dispute. IDOT's goal is to prevent claims from occurring. IDOT recognizes that preventing all claims from a contractor is not always possible. In those situations, IDOT's goal is to minimize the claims that occur and resolve them as soon as possible in an expeditious and cost effective manner. Many of the procedures and processes have been previously described in the Project Management Plan ("PMP"). IDOT will work with UPRR to finalize other ways disputes can be avoided/minimized, as further described below:

1. Communication is always a key element to a successful project. IDOT recognizes that it is important to stay involved in the project. Knowing and responding to issues prior to the beginning of a task rather than at the end of a task can reduce problems with the project. IDOT's goal is to:
 - a. Communicate more rather than less. IDOT (or its designee) will conduct periodic meetings with the Project's participants such as UPRR and Parsons Brinckerhoff (the Program Manager). Meeting minutes will be prepared and distributed to the participants.
 - b. Avoid adversarial relationships
 - c. Create a structured process for decision making
 - d. Use the request for information ("RFI") process as a communication tool to facilitate resolution of or to clarify document issues. IDOT will develop a standard form for RFI's which will be tracked to ensure a timely response to UPRR.
2. Create a document control system – See sections 2.5 and 3.1 of PMP. Also see section 4.7 of the PMP, Contract Administration. Issues can often be resolved by accessing documents quickly.
3. Create a safety plan - See section 7.1 of PMP.
4. Create a quality assurance/quality control plan – See section 6.1 of PMP. A quality assurance plan will assist in ensuring that many issues/problems identified during construction are resolved quickly rather than at the end of the project.
5. Claim evaluation process – IDOT will work with UPRR to develop an agreed upon claim dispute/evaluation process. IDOT, as guidance, suggests applying the *Standard Specifications for Road and Bridge Construction* (IDOT – January 1, 2007). It shall apply to instances where UPRR seeks additional payment or time under the contract and IDOT has not agreed with UPRR's claim during the ordinary course of contract administration.
 - a. UPRR shall submit its claim in writing to IDOT in sufficient detail to enable IDOT to determine basis and the amount of the claim.
 - b. UPRR's claim shall include reference to the applicable contract section. Supporting documentation must also be provided.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

- c. Unless otherwise agreed by IDOT, the exact amount of additional funds must be specified and broken down into: direct labor, direct materials, direct equipment, direct jobsite overhead, and direct offsite overhead.
 - d. If an extension of time is requested, specify the number of days and the reasons why the time extension is necessary.
 - e. UPRR's claim shall include the names of IDOT officials or employees involved in the claim or who have knowledge of the claim.
 - f. The claim must be certified by UPRR.
 - g. If the above requirements are not met, the claim shall not be considered and will be deemed waived by IDOT. UPRR's claim will also be considered waived if UPRR prevents IDOT from accessing its records or, UPRR prevents reasonable access to complete records of actual costs and additional time. IDOT and UPRR shall agree that claims shall be filed within a set date of UPRR's knowledge of the claim.
 - h. The fact that UPRR satisfied the requirements above shall not be construed as proving or substantiating the validity of the claim.
 - i. If deemed necessary by IDOT, it will schedule opportunity for UPRR to provide an oral presentation of its written claim.
 - j. IDOT will review UPRR's claim against the terms of the contract
 - k. Will a delay analysis or some other type of analysis (e.g., an audit, particularly for large claims) be necessary?
 - l. IDOT will advise UPRR in writing of its decision on the claim.
 - m. If the claim has merit, IDOT will make an equitable adjustment either in the amount of costs to be paid or in the time required for the work, or both. If IDOT finds the claim without merit, no adjustment will be made.
6. Arbitration. If a claim cannot be resolved informally or through the claim evaluation process set forth above, IDOT and UPRR have agreed to utilize the arbitration process per the rules of the American Arbitration Association (see section 9.1 of the July 16, 2010 construction agreement between IDOT and UPRR).

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

3. ADMINISTRATION

3.1 Document Control

Document Management Standards including the establishment of, training on and testing of the systems necessary to assure secure storage and convenient recall of critical program information is essential for the success of the program. The PMC is in the process of investigating the type of system that will best suit the program.

3.2 Scheduling and Project Control

The PMC is in the process of staffing a function to implement a system of program scheduling that includes the incorporation of the entire universe of program execution. This will provide for the periodic update of schedules, the monitoring of progress, the development of recovery schedules and the reporting of schedule progress to PMC management staff.

3.3 Cost Estimating

A Cost Estimator has been retained for the program to estimate expected program costs and review the accuracy of estimates. This will enable the provision for the periodic update of cost estimates and the monitoring of cost trends, as well as methods and procedures to enact corrective action when overages are identified. This is especially important given the FRA requirements with regard to fiscal responsibility for overruns, etc. The Cost Estimator will also establish budgets for program execution and track progress against the budget.

3.4 General Purchasing

Provide methods for the control and execution of general purchasing for the execution of the program. This purchasing function is not related to the procurement of system capital goods or professional services required to establish the final transportation system, but rather to equip and supply the PMC to conduct the program management activities.

3.5 Cost Accounting

The PMC has established systems for cost accounting to apprise IDOT of program costs vs. program progress. The PMC's Oracle-based financial system combined with regular generation of progress reports will provide for the review of PMC invoices and the review of deliverable status. The Oracle system will provide for payment of invoices or transmittal of reviewed invoices to IDOT, provide periodic reports on cost and budget compliance to program managers, and enable the preparation of PMC invoices to IDOT. All invoices and program progress reporting will conform to IDOT and/or FRA requirements.

3.6 Reporting

The following Grant and ARRA Reporting procedures will be followed for the Corridor Improvement Program. ARRA reporting is a critical requirement to document expenditures and provide an accounting of job generation through the program.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

3.6.1 Grant Reporting Requirements

1. Progress Report - Quarterly (1/1-3/31; 4/1-6/30; 7/1-9/30; 10/1-12/31)

- a. The form attached to the grant (Attachment 4) will be used. Each report shall set forth concise statements concerning activities relevant to the Project, and shall include, but not be limited to, the following:
 - 1) Relate the state of completion of items in the Statement of Work to expenditures of the relevant budget elements.
 - 2) An account of significant progress (findings, events, trends, etc.) made during the reporting period.
 - 3) A description of any technical and/or cost problem(s) encountered or anticipated that will affect completion of the grant within the time and fiscal constraints as set forth in the Agreement, together with recommended solutions or corrective action plans (with dates) to such problems, or identification of specific action that is required by the FRA, or a statement that no problems were encountered.
 - 4) An outline of work and activities planned for the next reporting period..
- b. One copy of report will be sent to the FRA Grant Manager (as defined in the Grant/Cooperative agreement) on or before the thirtieth (30th) calendar day of the month following the end of the quarter being reported.

2. Federal Financial Report - Quarterly

- a. SF-425 (Federal Financial Report) will be utilized in accordance with the instructions accompanying the form, to report all transactions including Federal cash, Federal expenditures and unobligated balance, recipient share, and program income.
- b. Copies will be sent to FRA Grant Manager on or before the thirtieth (30th) calendar day of the month following the end of the quarter being reported.

3. Federal Cash Transaction Report - Quarterly

Unless otherwise directed by FRA, quarterly cash transaction reports will not be provided because there will be no advance payments by FRA for this project.

4. Interim and/or Final Report

- a. If required, these reports will be provided at intervals specified in the Statement of Work.
- b. Within 90 days of project completion date or termination by FRA, IDOT to furnish one hard copy and one reproducible master original to the Grant Manager and one hard copy to the FRA Administrative Officer of a Summary Project Report. A final version of this report, detailing the results and benefits of the IDOT's improvement efforts, shall be furnished by the expiration date of the Grant/Cooperative agreement.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

3.6.2 ARRA Reports

1. NEPA Report (Section 1609(c) of ARRA)

IDOT will provide a quarterly report in accordance with section 1609(c) of ARRA providing the status and progress of projects and activities with respect to the National Environmental Policy Act (NEPA) review.

2. Jobs Accountability Quarterly Reports (Section 1512 of ARRA)

a. This report shall include the following:

- 1) The total amount of ARRA funds received
- 2) The amount of ARRA funds received that were expended or obligated to projects or activities.
- 3) A detailed list of all projects or activities for which ARRA funds were expended or obligated, including:
 - a) The name of the project or activity
 - b) A description of the project or activity
 - c) An evaluation of the completion status of the project or activity
 - d) An estimate of the number of jobs created and the number of jobs retained by project or activity
 - e) Detailed information on any subcontracts or sub grants awarded by IDOT to include the data elements required by the Federal Funding Accountability and Transparency Act of 2006 (Pub. L. No. 109-282) allowing aggregate reporting on awards below \$25,000 or to individuals, as prescribed by the Director of the Office of Management and Budget.

b. Reports will be provided no later than ten days after the end of each quarter.

c. The OMB may issue additional guidance on the preparation and submission of Jobs Accountability Reports, to which the PMC will comply.

d. IDOT will register with the Central Contractor Registration database or complete other registration, as determined by the Director of the Office of Management and Budget.

3. Periodic Reports (Section 1201 of ARRA)

These reports (due, per ARRA, annually) require the following information describing:

- a. The amount of Federal funding appropriated, allocated, obligated and outlaid under the Grant/Cooperative agreement.
- b. The number of projects that have been put out to bid under the Grant/Cooperative agreement and the amount of Federal funds associated with such projects.
- c. The number of projects for which contracts have been awarded under the Grant/Cooperative agreement and the amount of Federal funds associated with such contracts.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

- d. The number of projects for which work has begun under such contracts and the amount of Federal funds associated with such contracts.
- e. Infrastructure investments, as applicable or directed by FRA.
- f. The number of projects for which work has been completed under such contracts and the amount of Federal funds associated with such contracts.
- g. The number of direct on-project jobs created or sustained in the associated supplying industries, including the number of jobs created and the total increase in employment since February 17, 2009 (the date ARRA was enacted).
- h. Information tracking the actual aggregate expenditures from Grantee sources (both internal and external) for projects eligible for funding under the Grant/Cooperative agreement beginning on the date of ARRA enactment through 9/30/10 as compared to the level of expenditure that was planned to occur during such period as of ARRA's enactment date.
- i. DOT or FRA may issue additional guidance on the preparation of Periodic Reports.

4. Additional Information

- a. To satisfy the purposes of ARRA, IDOT may be required to provide additional information in response to requests from OMB, or the Department's Inspector General.
- b. FRA will inform IDOT if and when such additional reports or information are required.

3.6.3 Intercity Passenger Rail Service Reports

1. Project Benefit Report

IDOT, UPRR, and Amtrak are currently developing a Service Outcomes Agreement. This agreement will identify travel time and reliability parameters and associated reporting requirements. Upon completion of this agreement (anticipated December 2010), the reporting requirements will be inserted into this PMP.

3.7 Public Involvement

The PMC will be responsible for the development of a public involvement office to track and disseminate program information to the media and directly to the public, as well as maintain communications with principle stakeholders. This office will have a coordinated working relationship with the IDOT and State Government public information services/staffs. Speakers' Bureaus and other program-tested methods will be employed to ensure that a consistent and positive message is available to the media, to local governments and to the general public. The PMC will establish and maintain a program website. The public involvement office will establish points of contact with local governments in the on-line towns and cities on the Chicago-St. Louis High Speed Rail route.

The public involvement plan is currently being developed to engage the public and stakeholders to advance the acceptance and success of the program. This plan will outline the public involvement activities through the construction. Public outreach meetings and communication tools will occur to engage the public in the project.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

The public involvement process for this study also includes the establishment of a system for communicating news to the appropriate outlets and the maintenance of a program website for timely communication of program goals and progress. Advanced information dissemination and document control tools, such as ProjectSolve² can be used to expedite the flow of documents between IDOT, the PMC, the rail carriers and regulatory agencies in a secure (password-protected, etc.) manner.

Public Involvement tasks for Corridor Improvement Program will include:

- Developing message points and frequently asked questions.
- Coordinating efforts with IDOT, PB, and local communities.
- Providing media efforts.
- Supporting and facilitating meetings (elected officials, counties, small groups).
- Updating Project mailing list.
- Developing and distributing newsletter and informational sheet throughout the construction period.
- Creating project specific website content and graphics to be placed on HSIPR site.
- Logging and managing comments via comment management system.

In addition to the project leadership committee, the following table identifies key contacts for the public involvement process.

Public Involvement Key Contacts	
Miriam Gutierrez	IDOT Rail Planning
Paris Ervin/ Josh Kauffman	IDOT Public Information
Marc Magliari	Amtrak
Joe Bateman / Mark Davis	UPRR
Tim Selover	PMC (PB)
Tracy Morse	PMC (Images, Inc)

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

4. CONTRACTING

4.1 Contract Standards

In accordance with IDOT requirements, the PMC will establish contracting standards for the engagement of outside consultants, developers, vendors, equipment suppliers and contractors ("the program team"). The PMC will also compose "boilerplate" contractual provisions to enforce the requirements and protocols of the Program Management Plan.

4.2 Professional Services Procurement

4.2.1 Illinois Department of Transportation

In conformance with IDOT and FRA requirements, IDOT and the PMC will procure those professional services necessary to execute the program. IDOT will procure consultant services ("PTB Consultants") using its procurement process which is also known as a Professional Transportation Bulletin ("PTB"). This bulletin is the official notice of needed professional services for IDOT. Additional details regarding the PTB can be found at <http://www.dot.state.il.us/desenv/ptb.html>

The selection of PTB Consultants by IDOT is not based on cost. Rather, it focuses on the firm's professional qualifications, experience, and the expertise of key personnel to be assigned to the project with consideration also given to:

- 1) Ability to complete the work in the time required and the firm's existing workload.
- 2) The firm's proximity to the project, when important.
- 3) The extent of work, which must be subcontracted by the firm and their proposed method of accomplishing the project objectives.
- 4) Financial evaluation of the firm and its accounting methods.
- 5) Performance rating for past work done for IDOT, if applicable.

PTB Consultants will be responsible for specification development and design of civil and roadway facilities, communication and signal systems, operating and maintenance facility architecture, station architecture and oversight of rolling stock design, manufacture and delivery.

4.2.1 Union Pacific Railroad

Union Pacific Railroad will procure professional services as necessary to execute the program. UPRR will assign professional services work under an existing Master Services agreement or it will issue a request for proposals. UPRR will provide IDOT an opportunity to review its drafted request for proposals prior to issuance in order to review scope, selection criteria, and DBE participation goals.

Professional services are anticipated for hydrologic and hydraulic evaluations for the structures along the Corridor, Environmental/Flood plain permitting for the structures as well as the new construction project areas, surveying/ mapping, and ARRA reporting.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

4.3 Contractor & Material Procurement

4.3.1 Illinois Department of Transportation

In accordance with the requirements of IDOT, IDOT will procure the services, including as appropriate, the supply of material for the construction of fixed facilities. IDOT will procure contractors using the IDOT Construction Contractors Bulletin. This Bulletin is the official publication and invitation for construction bids by the Illinois Department of Transportation. Lettings are subject to and governed by the rules of the IDOT adopted at *44 Illinois Administrative Code 650* and *44 Illinois Administrative Code 660*, and by the provisions of the Bulletin. Additional details can be found at <http://www.dot.state.il.us/dobuisns.html#letting>

Contractor procurement by IDOT is anticipated for construction related to complex road crossings along the Corridor.

4.3.1 Union Pacific Railroad

The majority of the material and contractor procurement will be performed by UPRR. Due to the specialized nature of the construction, a large portion of the material and contractor procurement will be via existing long term Master Services agreements. Additional material and contractor services will be procured using the UPRR suppliers; see UPRR's website: <http://www.uprr.com/suppliers/index.shtml>

UPRR will provide IDOT an opportunity to review bid packages prior to issuance to provide input regarding scope, terms and Disadvantaged Business Enterprise (DBE) participation goals.

4.4 Equipment Procurement

In conformance with IDOT, FRA and Amtrak requirements, 110 MPH-capable certified rolling stock, including passenger cars and locomotives, to be used on the Chicago-St. Louis Corridor, will be procured. The equipment will utilize specifications and procurement strategy developed as part of Passenger Rail Investment and Improvement Act of 2008 ("PRIIA"), section 305 technical committee work. Industry review will occur as part of PRIIA process. After the PRIIA specifications are completed, IDOT will select and add any custom components to the specifications and release a bid package.

Rolling stock procurements using federal funds will be subject to Buy America requirements. Also included in this area of responsibility are units of maintenance equipment, both mobile and fixed, and automatic reservation and ticketing devices, if required.

4.5 Right-of-Way Acquisition

In accordance with the requirements of IDOT, IDOT will provide for the acquisition of any necessary right of way required for establishment of the transportation system. This function must be coordinated with the UPRR real estate group, other involved rail carriers (such as at a complex junction, etc.), and affected communities (as it relates to station improvements).

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

4.6 Railroad Agreements

Agreements will be established as required with each of the host/owning railroads for access to the railroad property and for all other facets of the program which require the sign-off and/or permission of the rail carriers (access to drawings and data, etc.). These or other agreements that may be required will set forth the roles and responsibilities of the each of the parties. It is IDOT's intent that the agreements will make provision for the assignment of liability and risk, provide for indemnity as permitted, establish standards and provisions for maintenance, standards for dispatch, establish Force Account Agreements for cost reimbursement and, possibly, incentives for exemplary performance. They will also provide for timely communication during operations and methods for the resolution of disputes.

The work performed as part of the 2010 TRT Project & Advance Program Work is guided by the construction agreement (dated July 16, 2010) between IDOT and the UPRR. The contract between UPRR and IDOT for construction work to be performed as part of the Corridor Improvement Program for 2011 was executed on March 4, 2011. In addition, IDOT and the UPRR are in the process of negotiating a maintenance agreement which should be finalized in the near future. IDOT, UPRR and Amtrak have also executed a Service Parameters agreement (December 2010). A summary of the anticipated railroad agreements as part of the Corridor Improvement Program is shown below. Note, these agreements are subject to change/modification. While the agreements are not directly applicable to the IL-Chicago-St. Louis Corridor Supplement Application and the IL-Chicago-St. Louis Corridor Supplement – SDP Application, they do show that the State and affected railroads are able to work together to achieve a common goal.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

Railroad Agreements		
Agreement Name	Purpose	Parties to Agreement
Construction Agreement	Pertains to track reconstruction, structural work, signal work and the procurement and testing of new equipment.	UPRR and State of Illinois
Maintenance Agreement	Agreement to describe UP's maintenance responsibility for improvements placed on its property which are funded through FRA.	UPRR and State of Illinois
Service Outcome Agreement	Agreement to describe service parameters once HSIPR service on the UP line begins	UPRR, State of Illinois, and Amtrak
Station Improvement-Dwight, Pontiac, Lincoln, Carlinville, Alton, Springfield	Station improvement in support of 110 mph rail service	State of Illinois and applicable community and/or private owner
Cab Signal Implementation Agreement	Equipment requirements, design and construction services for implementation of cab signal overlay on Dwight-Pontiac line section. Also covers testing and cut-in of signal system for revenue service.	IDOT, ICC, UPRR
PTC Implementation Agreement	Equipment requirements, engineering and construction services to implement PTC on the balance of the corridor. Will also cover ITCS interfaces, testing and cut-in system for revenue services	IDOT, ICC, UPRR
Dispatch control agreement between UP and TRRA	Covers the East St. Louis to St. Louis line section.	UPRR, TRRA, State of Illinois and Amtrak
Dispatch control agreement between UPRR and KCS	Covers the Alton-East St. Louis line section.	UPRR, KCS, Amtrak
Dispatch control agreement between UPRR and NS at Iles	Crossing of two rail carriers in downtown Springfield	UPRR, NS, and Amtrak
Maintenance agreement between UPRR and KCS	Covers the area between Alton and East St. Louis	UPRR, KCS, and Amtrak
Illinois Commerce Commission required agreements	Necessary access agreements/ letters	IDOT and Illinois Commerce Commission

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

4.7 Contract Administration

Under the cost accounting provision, the PMC will review contract invoices and provide for the accounting and control of deliverables. The PMC will provide protocols for contract change management, contract termination, review and settlement of claims, and provide for contract closeout and audit. See PMP section 2.8, Dispute Resolution, for details regarding claim evaluation and arbitration.

4.7.1 Change Management Process

The purpose of change management between UPRR and IDOT is to realign budget line items within an IDOT/UPRR agreement to reflect actual prices and costs. These actual prices/costs replace the estimated line item costs developed when the agreement was originally compiled. Note, the bottom line total dollar amount of the contract will NOT increase or decrease under the change management process. Rather, the change management process is limited to line item changes. The procedure for the Change Management process is shown below:

1. Identification - First, the need to realign the line item in the subject budget must be identified by IDOT, the PMC or UPRR. The line items are based on UPRR's work orders identified in the subject contract. The work orders contain a series of tasks with a line item for labor, material and/or contract values.

Typically, adjustments/modifications to the line items within the work order will utilize the contingencies so as not to adjust the overall cost of the agreement.

2. Reason for Change - Next, a written statement supporting the requestor's change request must accompany the request. It shall include an outline of the line item(s) being identified for change and a chronology of events leading up to the change request is required. The outline shall also include an estimate or exact change in the cost (where known) or duration.

The requestor identifies what the change request results from, such as the items set forth below.

- Adjusted Quantity
 - Adjusted Unit Cost
 - Adjusted Contract/Subcontract
 - Modified Scope
 - Differing Conditions
 - Regulatory Agency Requirements
 - Other Conditions (requires explanation)
3. Support - The requesting party must then identify and gather support for the requested change. Typical support documents include, but are not limited to, correspondence, bills/invoices, receipts, chronologies, and actual quantities.
 4. Submittal - The request for change and the support documents shall be submitted to the PMC by the UPRR who will review and discuss the items and their adjustment. Once satisfied that the information within the package explains the issues associated with the change request, the package will be passed to IDOT for a final review and concurrence.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

5. Review - The request for change shall be reviewed by UPRR, IDOT and the PMC. All three parties must agree that the change is necessary before it will be effectuated. If all parties do not agree to the requested change, the requestor shall have another opportunity to provide additional justification and/or documentation. Once a decision has been reached on the request for line item change, all parties execute an Agreement Modification Notice (see sample, below). "Approve/Concur", "For Information Only", and "No Comment" are considered as final or "Closed" dispositions or status.
6. Dissemination of Information - Modification to the PMC's tracking sheets and other related documents may be required. These changes are to be posted and reviewed on a regular basis.

The line item change will be tracked within a log and with a cover sheet. Each change is managed within a shared system. Once items are closed, the appropriate modifications to the related documents/line items will be made to reflect the adjustments to each line item.

CORRIDOR IMPROVEMENT PROGRAM**

4.7.2 Change Order Process

Change orders are modifications to the contract. This includes work that is added to or deleted from the original scope of the contract which alters the original contract amount or completion date.

Construction by Union Pacific Railroad

IDOT and the UPRR are currently negotiating the procedure for processing change orders to the UPRR-IDOT construction agreement. This procedure will be inserted into this PMP after the construction agreement is signed (anticipated December 2010).

Construction by IDOT Contractors

While the majority of the Program construction will be performed by UPRR forces / contractors, IDOT may let construction contracts for the complex road crossing improvements and station improvements. Change orders to this construction will be governed by the *Standard Specifications for Road and Bridge Construction* (IDOT – January 1, 2007), Division 100 – General Requirements and Covenants. Section 104 (Scope of Work) and Section 109 (Measurement and Payment) specifically address change order procedures.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

5. FINANCIAL

5.1 Funding Sources

The PMC will work with IDOT to assist in the identification, tracking and as required, tap sources of capital funds for the establishment of the transportation system. The sources of capital funds may be equity, debt, bonds and grants (including unobligated FTA funds for related transportation improvements, etc.). Sources and uses of capital funds shall be identified and reported to IDOT, FRA and FTA.

On July 13, 2009, a \$31 billion State of Illinois capital bill, "Illinois Jobs Now!" was signed into law. This bill includes funding for high-speed rail and the State of Illinois' match applicable to the cooperative agreement (5%) will come primarily from this bill. See the Corridor Improvement Program Financial Plan for more details regarding funding.

5.2 Risk Management

A Risk Management Plan will be developed by the PMC. The Risk Management Plan ("RMP") will identify potential risks, the likelihood of occurrence, and the impact to the project. The PMC will perform risk assessments systematically and periodically throughout the project development at significant milestones. IDOT and the PMC will coordinate this effort with FRA and UPRR.

Risk Management Plan Methodology

A RMP will be implemented as follows:

Step 1: Identify Risks

A well thought-out and consistent approach to identify a comprehensive list of potential risk events will be employed. Specifics will be used to identify and describe the risk. Some techniques to identify risk are brainstorming and expert interviews as part of a risk assessment workshop.

Step 2: Quantify Risks

Develop a risk management matrix with all the risks grouped in categories. Assign the risk to the owner, contractor or other parties (to be agreed) and show on the matrix.

Determine the probability of the occurrence and impact to cost and/or schedule for each risk and show on the matrix using qualitative designations. (i.e. Low, Medium, High)

Use this matrix to compare the probability to the level of impact for each risk.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Step 3: Analyze and Prioritize Risks

Identify the top 20% of the risks based on the risk exposure (probability and impact) that must be monitored using the matrix. Identify the estimated dollar value and/or length of delay for each monitored risk. Prioritize the monitored risks using dollar estimates and time schedule delays. A technique to prioritize is paired comparison, which takes into account the degree of control the project team has over the risk event followed by the timing of the risk event. (i.e., High Probability-Medium Impact).

Identify the responsible party for each risk.

Step 4: Planning for Risks

Create risk response strategies for each monitored risk. Evaluate and select a primary response. Incorporate options into the risk and project plans.

Step 5: Periodic Updates

The risk register is dynamic document that will be updated each month to reassess risks and response strategies.

An initial risk register for the Corridor Improvement Program work has been created. This register, which addresses potential risks, responses to the risk and risk reduction strategies is contained in the appendix of the Financial Plan for the work. This initial risk register will be expanded during the Corridor Improvement Plan risk workshop scheduled to occur in January 2011.

5.3 Ridership and Revenue Assessments

5.3.1 Ridership Estimates and Surveys

The PMC will perform investment-grade ridership forecasts and revenue estimates. Forecasts must meet the expectations of the financial marketplace. The PMC will conduct focus group and other investigations to provide IDOT, Amtrak and FRA with realistic insight into the demographic of the customer base and trip purposes serviceable by the system. Market research is to be used as the basis for train sizing and schedule development. Upon completion of the ridership forecasts and revenue estimates, this information will be inserted into the Corridor Improvement Program Financial Plan.

5.3.2 Customer Service Plan

The results of ridership investigations will be utilized to establish and optimize a customer service plan for the Chicago-St. Louis Corridor that will maximize the cost-benefit aspects of the program and meet the customer expectations for dominate trip purposes. Since enhancing the feasibility of the Amtrak connections at either end of the Corridor is a key objective of this program, the PMC will work closely with Amtrak and IDOT in the development of a comprehensive program to optimize connections to key destinations beyond the geographic limits of the Corridor.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

5.3.3 Pricing Plan

Results of ridership investigations will be used to define a pricing plan for ticketing and the provision of other customer services on the Chicago-St. Louis Corridor trains.

5.4 Financial Market Interface

The PMC shall establish and maintain relationships in the financial marketplace to stay abreast of conditions that may affect the financing of the Corridor Improvement Program. Marketplace conditions shall be reported regularly to IDOT, Amtrak and the FRA.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

6. QUALITY ASSURANCE / QUALITY CONTROL PROGRAM

The PMC has prepared a Quality Management System ("QMS"). The Quality Management System includes a Quality Assurance Manual and associated Quality Procedures that will define the quality system objectives, responsibilities, on-going quality control requirements, and quality assurance oversight and audit requirements. As of the date of this document, the Quality Assurance Manual has been prepared, reviewed by IDOT and is in the process of being finalized for issuance. The associated quality procedures are also being developed. These documents are 'living documents' and will be updated as necessitated by the project.

6.1 Quality Management System Overview

The safety, reliability, maintainability, and human factor considerations within High-Speed Rail related projects or programs demand that systematic, consistent, and authoritative process controls be implemented. Early identification of conditions that may affect a project's ability to perform satisfactorily, and timely corrective action that precludes repetition of problems, requires the establishment of clear, concise quality criteria. Attainment of these criteria is achieved through sound planning, engineering design, effective procurement and contract procedures, proper contractor/supplier selection, and effective implementation and control of manufacturing, construction, installation, testing, and operational activities.

The controls necessary for preserving the integrity of the quality activities and the documentation of the results of these activities are categorized into three general areas:

- Review of design, contract, and procurement documents, as well as testing, operating, and maintenance procedures to verify that quality aspects have been considered.
- Surveillance and/or witness of manufacturing, construction installation, and integrated testing activities for adherence to design, contract, and operational requirements.
- Audits of Quality Management Systems for adequacy and compliance with requirements.

The QMS for the Corridor Improvement Program is based on the Quality Assurance and Quality Control Guidelines developed by the Federal Transit Administration ("FTA"), a sister agency to the FRA with both agencies being a part of the U.S. Department of Transportation. These guidelines are well developed and have been successfully used for many years for projects of similar size and characteristics as this Project. In this regard, the Quality Management System for this Project will satisfy the requirements of 49 CFR Part 633.25 and follows the format recommended by the Federal Transit Administration (FTA) in FTA-IT-90-5001-02.1, *Quality Assurance and Quality Control Guidelines*, February 2002.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

The Quality Management System will address fifteen quality management system elements mandated by the FTA and includes an additional element to measure, analyze and improve processes affecting quality:

1. Management Responsibility
2. Documented Quality System
3. Design Control
4. Document Control
5. Procurements
6. Product Identification and Traceability
7. Process Control
8. Inspection and Testing
9. Inspection, Measuring, and Test Equipment
10. Inspection and Test Status
11. Nonconformance
12. Corrective and Preventive Action
13. Quality Records
14. Quality Audits
15. Training and Resource Management

6.2 Project Quality Manual Goals and Objectives

The goal of the QMS is to ensure that all work and deliverables prepared by the PMC conforms to IDOT, FRA or other regulatory agency standards of Quality Assurance and Quality Control.

The objectives of the Project Quality Manual ("PQM") are to:

- Establish a guiding document which provides overall critical direction and support for implementation of the Corridor Improvement Program Rail Program Quality Management System. The PQM outlines the elements of the QMS, and defines the IDOT policy regarding those elements.
- Establish a systematic approach to ensure that contracted products and services are produced and delivered as specified in a timely and cost-effective manner.
- Ensure attainment of the expected level of quality on the IDOT ChiSL corridor High Speed Rail Program.
- Provide a quality standard for contractors', consultants', and suppliers' generated quality management systems

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

6.3 Project QA/QC System

6.3.1 General QA/QC Approach

It is the intent of the PMC to maintain oversight of project quality implementation throughout the Project by imposing requirements for consultants /contractors /suppliers to have an effective Contract Quality Management System ("CQMS"). Each consultant/ contractor/ supplier will be required to submit a CQMS, which is adequate for the applicable scope of their contract. The submittal will be reviewed against the requirements of this PQM and approved by the IDOT ChiSL corridor High Speed Rail Program Quality Assurance Manager for adequacy and acceptance prior to implementation.

Specialty subcontractors may be required to conform to and maintain their certification in applicable ISO Standards or equivalent Quality Standards. Towards that end, the PMC's QA/QC program will include regular review and periodic audit requirements to ensure that standards are being maintained.

The PMC's QA/QC Approach for the Corridor Improvement Program construction work will include a combination of verification of quantities of materials and production for the work performed, and verification of quality of the materials to be used for the construction process. If discrepancies are found with either the quantity or quality of material for the project, UPRR will be notified immediately so discussions can commence to investigate and resolve the issue.

6.3.2 Material Testing Policies and Procedures

Purchasing requirements for materials used for the Corridor Improvement Program are stated in applicable contract documents and apply to all suppliers, program consultants, design consultants, construction management consultants, construction contractors, and material manufacturers/suppliers. The quality requirements placed on the supplier, consultant or contractor depend upon the nature of the service or product.

The contract or purchasing requirements clearly specify the expectations of the Corridor Improvement Program, including relevant standards; drawings; specifications; process requirements; inspection instructions; and, approval criteria for materials, processes, and product. The procurement documents are reviewed and approved by a designated authority for adequacy of specified requirements prior to release.

Because inspection and testing are primarily the contractor's responsibility, the contractor must develop a project-specific testing and inspection plan that is subject to review and acceptance by the PMC. The contractor may utilize an independent testing agency if required, to ensure that testing and inspection is carried out in accordance with project requirements.

Inspection and testing procedures are planned and executed as necessary to verify quality. Procedures control the acceptance of incoming product, the evaluation of work in progress, and the conduct of final inspection and testing. Records of inspections and tests clearly indicate whether the product has passed or failed the inspections and/or tests according to defined acceptance criteria. Records also identify the inspection authority responsible for the release of product.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

6.3.3 Track Materials QA/QC Approach

Track materials constitute a significant portion of the total material items anticipated to be required for the Corridor Improvement Program. The QA/QC efforts for track materials will principally comprise verification of quality and quantity of the key material items to be used for the Corridor Improvement Program, which includes the following material components:

- Concrete Ties
- Ballast
- Running Rail
- Turnouts
- Rail Welds
- Rail Clips/Fasteners
- Concrete Grade Crossing Panels

Materials quality verification for these items for the Corridor Improvement Program work will include obtaining documents from both the manufacturer and the UPRR to verify that the materials were inspected, tested and certified, as applicable and required in accordance to UPRR's procurement specifications for these materials. This documentation may be supplemented by additional field and/or laboratory testing to verify material quality. Typical track material standards that are anticipated to be applicable to the Corridor Improvement Program include those from the American Railway Engineering and Maintenance of Way Association (AREMA), the American Society for Testing and Materials (ASTM), UPRR's own specific standards and others.

Material quantity and production quality verification will be comprised primarily of spot verification. The development of specific material and production quantity and quality verification procedures will be a function of the PM Team's Resident Engineer.

6.3.4 Concrete Tie QA/QC Approach

The concrete ties to be used on the Project work have been identified as a key element of the QA/QC program. Because of the special nature of concrete ties, staff members from the University of Illinois at Champaign-Urbana (UIUC) will perform this work, operating as Transportation Technology Transfer ("TTT"), LLC. TTT will contract directly with the PMC and operate under the direction of the PMC and IDOT.

The focus of TTT is to confirm the quality processes involving the concrete ties to be used in the program and provide recommendations for quality improvements. TTT will provide guidance on the necessity and requirements for tie testing through field testing and/or an independent laboratory. TTT will also assist with the oversight of field testing and and/or independent laboratory tie testing that may be performed.

Specifically, the TTT proposal includes the following four-step concrete tie manufacturer QA/QC investigation activities. The complete TTT draft scope of work and proposal is attached to this document as Appendix B.

1. Evaluate the design and performance plans and specifications used for the manufacture of concrete ties for UP/IDOT.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

2. Evaluate all QA/QC processes and procedures in use by the tie manufacturer(s) for the concrete ties supplied to UP/IDOT.
3. Evaluate the internal QA/QC processes that UP and IDOT use to ensure the concrete ties received from the tie manufacturer meets the plans and specifications.
4. Provide technical oversight and comment for any required laboratory or field testing of concrete ties and fastening systems, as requested by the PMC, IDOT and/or the FRA.

The results of the combination of in-plant test validation and supplemental independent lab testing will provide an indication of the manufacturing quality and compliance to specifications of the concrete ties used on the Project. Should the assessments and tests reveal concerns, discussions between IDOT, UPRR and CXT would ensue to determine what remedial action may be appropriate. Concrete Tie warranty provisions between UPRR and CXT are addressed in Section 6.3.3, below.

The results of these quality assessment tests will also lay the foundation for development of focused QA/QC procedures for independent inspection at the concrete tie manufacturing facilities for follow on work in the Corridor Improvement Program. The concrete tie QA/QC work may also provide information to UPRR and IDOT for recommendations for possible changes to the UPRR specification for concrete ties for future programs.

Additional details of proposed concrete tie QA/QC plans are provided in the "Concrete Tie QA/QC Plan" (10/19/10) document included within Appendix B.

Concrete Tie Warranty Provisions

The UPRR Concrete Tie Specification for the Springfield/Joliet Subdivisions dated April 2010 includes the following warranty provisions in specification Section 15, on page 20 of 20:

- The concrete ties shall be guaranteed by the manufacturer, effective from the month and year of manufacture shown on the tie for a period of 5 years against any defect attributable to manufacturer.
- During the warranty period, if substantial quantities of ties have to be withdrawn from service due to a potential manufacture's defect, a laboratory examination shall be performed.
- In cases where a manufacturing fault is detected during the examination, the manufacturer shall provide replacement ties for all defective ties at a rate of 1.5 replacement ties for each defective tie.
- If no agreement can be reached during the examination referred to above, the matter shall be referred to independent specialists, acceptable to both parties, to settle the dispute. The cost shall be borne by the party found to be responsible.
- Defective ties shall remain the property of the railroad.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

6.3.5 Rolling Stock & Motive Power QA/QC Approach

Procurement of high quality Rolling Stock and Motive Power units will be assured through a rigorous system of ongoing inspection and testing. Within this industry a high level of Quality Assurance and Quality Control is expected and it is anticipated that the manufacturer(s) who are awarded these contracts will have sophisticated quality management system(s) that as a minimum, meet the requirements of the Project Quality Program and those standard industry manufacturing requirements to comply with ISO 9000:2008 or a demonstrated equivalent quality standard.

A key early deliverable for the rolling stock contractors will be the submittal and acceptance of their management and quality assurance plans including detailed Test and Inspection Plans. It is envisioned that these plans are required within two-three months of award of contract for the car and locomotive procurements and must be accepted before proceeding to the submittal of the preliminary design drawings and documentation.

6.3.6 Positive Train Control QA/QC Approach

Part of the Corridor Improvement Program involves the design and building of infrastructure for positive train control ("PTC"), a new technology that works as an overlay with existing safety systems to ensure compliance with train movement authorities, signals and speed limits. It is anticipated that UPRR will be the lead designer and contractor for this work utilizing the services of various specialized sub-contractors. As with the rest of the Project, QA/QC will be of paramount importance and all design and construction activities will follow an approved Quality Program. Specialist designers will be required to submit their quality programs and their detailed test and inspection plans to both the UPRR and the PMC Quality Assurance manager for approval.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

7. SAFETY AND SECURITY PROGRAM

7.1 Safety Approach

The program will develop and adopt a System Safety Program Plan (“SSPP”) to support and enhance a culture of safety. This plan will adopt rules and procedures to protect project personnel and others in the office and in the field. The plan will address the need for project personnel to be aware and trained, retrained, and if necessary, certified in safety practices of the host railroads, the FRA, and others if entry upon railroad properties is required. This document will also provide procedures for enforcement, corrective action and reporting.

FRA will be issuing regulations requiring a SSPP for each high speed rail corridor and detailing what must be included in the SSPP, with specific regulations governing each category of information required. In addition, many of FRA’s existing regulations are applicable regardless of the speed of the track. Furthermore, agencies such as the Illinois Commerce Commission and IDOT are exercising their jurisdiction over various aspects of safety in the Project Corridor. The host railroads, primarily UPRR and the passenger railroad (Amtrak) also have responsibilities for specific elements under existing FRA regulations.

The UPRR point of contact for safety issues is currently John Brennan. Anyone on the project team visiting the UPRR property will annually be required to participate in the contractor orientation course and evaluation via www.contractororientation.com. A course completion card will be issued by UPRR upon completion of the orientation courses and must be carried while on UPRR property.

In advance of the FRA’s issuance of SSPP regulations, the SSPP plan will include the following points based on the Code of Federal Regulation’s Rail Fixed Guideway System; State Safety Oversight, 49 CFR Part 659.19.

7.1.1 Policy Statement and Authority for SSPP

A policy statement signed by the High-Speed Rail (“HSR”) program’s chief executive that endorses the safety program and describes the authority that establishes the SSPP.

7.1.2 Goals and Objectives

A clear definition of the goals and objectives for the HSIPR safety program and stated management responsibilities to ensure that they are achieved.

7.1.3 Overview of Management Structure

An overview of the management structure of the HSIPR program, including: (i) an organization chart; (ii) a description of how the safety function is integrated into the rest of the organization; and (iii) clear identification of the lines of authority used by the HSIPR program to manage safety issues.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

7.1.4 SSPP Control and Update Procedure

The process used to control changes to the SSPP, including: (i) specifying an annual assessment of whether the SSPP should be updated; and (ii) required coordination with the oversight agency, including timeframes for submission, revision and approval.

7.1.5 SSPP Implementation Activities and Responsibilities

A description of specific activities required to implement the system safety program, including: (i) tasks to be performed by HSIPR program safety function, by position and management accountability, specified in matrices and/or narrative format; and (ii) safety-related tasks to be performed by other HSIPR program departments, by position and management accountability, specified in matrices and/or narrative format.

7.1.6 Hazard Management Process

A description of the process used by the HSIPR program to implement its hazard management program, including activities for: (i) hazard identification; (ii) hazard investigation, evaluation and analysis; (iii) hazard control and elimination; (iv) hazard tracking; and (v) requirements for on-going reporting to the oversight agency regarding hazard management activities and status.

7.1.7 System Modification

A description of the process used by the HSIPR program to ensure that safety concerns are addressed in modifications to existing systems, rolling stock, and equipment, which do not require formal certification but which may have safety impacts.

7.1.8 Safety Certification

A description of the safety certification process required by the HSIPR program to ensure that safety concerns and hazards are adequately addressed prior to the initiation of passenger operations and subsequent major projects to extend, rehabilitate, or modify an existing system, or to replace rolling stock and equipment will be created.

7.1.9 Safety Data Collection and Analysis

A description of the process used to collect, maintain, analyze, and distribute safety data, to ensure that the safety function within the HSIPR program receives the information necessary to support implementation of the system safety program.

7.1.10 Accident/ Incident Investigations

A description of the process used by the HSIPR program to perform incident notification, investigation and reporting, including: (i) notification thresholds for internal and external organizations; (ii) investigation process and references to procedures; (iii) the process used to develop, implement and track corrective actions that address investigation findings; (iv) reporting to internal and external organizations; and (v) coordination with the oversight agency.

7.1.11 Emergency Management Program

A description of the process used to develop an approved, coordinated schedule for emergency management program activities, which include: (i) meetings with external agencies; (ii) emergency planning responsibilities and requirements; (iii) process used to evaluate emergency

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

preparedness, such as annual emergency field exercises; (iv) after action reports and implementation of findings; (v) revision and distribution of emergency response procedures; (vi) familiarization training for public safety organizations; and (vii) employee training.

7.1.12 Internal Safety Audits

A description of the process used to ensure that planned and scheduled internal safety audits are performed to evaluate compliance with the SSPP, including: (i) identification of departments and functions subject to review; (ii) responsibility for scheduling reviews; (iii) process for conducting reviews, including the development of checklists and procedures and issuing of findings; (iv) review of reporting requirements; (v) tracking the status of implemented recommendations; and (vi) coordination with the oversight agency.

7.1.13 Rules Compliance

A description of the process used by the HSIPR program to develop, maintain, and ensure compliance with rules and procedures having a safety impact, including: (i) identification of operating and maintenance rules and procedures subject to review; (ii) techniques used to assess the implementation of operating and maintenance rules and procedures by employees, such as performance testing; (iii) techniques used to assess the effectiveness of supervision relating to the implementation of operating and maintenance rules; and (iv) process for documenting results and incorporating them into the hazard management program.

7.1.14 Facilities and Equipment Inspections

A description of the process used for facilities and equipment safety inspections, including: (i) identification of facilities and equipment subject to regular safety-related inspection and testing; (ii) techniques used to conduct inspections and testing; (iii) inspection schedules and procedures; and (iv) description of how results are entered into the hazard management process.

7.1.15 Maintenance Audits and Inspections

A description of the maintenance audits and inspections program including identification of the affected facilities and equipment, maintenance cycles, documentation required, and the process for integrating identified problems into the hazard management process.

7.1.16 Training and Certification Program for Employees and Contractors

A description of the training and certification program for employees and contractors, including: (i) categories of safety-related work requiring training and certification; (ii) a description of the training and certification program for employees and contractors in safety-related positions; (iii) process used to maintain and access employee and contractor training records; and (iv) process used to assess compliance with training and certification requirements.

7.1.17 Configuration Management and Control

A description of the configuration management control process, including: (i) the authority to make configuration changes, (ii) process for making changes, and (iii) assurances necessary for all involved departments to be formally notified.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

7.1.18 Local, State, and Federal Requirements

A description of the safety program for employees and contractors that incorporates the applicable local, state, and federal requirements, including: (i) safety requirements that employees and contractors must follow when working on, or in close proximity to, active railroad tracks/property; and (ii) process for ensuring the employees and contractors know and follow the requirements.

7.1.19 Hazardous Materials Program

A description of the hazardous materials program including the process used to ensure knowledge of and compliance with the program requirements.

7.1.20 Drug and Alcohol Program

A description of the drug and alcohol program and the process used to ensure knowledge of and compliance with program requirements.

7.1.21 Procurement Process

A description of the measures, controls, and assurances in place to ensure that safety principles, requirements and representatives are included in the HSIPR program procurement process.

7.2 Security Approach

Security procedures for field work will follow the host railroad's existing security procedures. The project will follow UPRR's security program. The goals of the UPRR program are:

1. Initiate a personal background check.
2. Provide safety training
3. Provide security awareness training
4. Provide authorized access credentials (Photo Identification Badge)

This Program will be administered by e-VERIFILE, Union Pacific's contracted Background Investigation Company and the program will be known as e-RAILSAFE.

The requirements of the UPRR program are:

- Railroad Contractors to register their company with the "e-RAILSAFE program." The web address is www.e-railsafe.com
- Railroad Contractors must secure Background Consent Forms (waivers) from each of their employees who, in the scope of their duties, will need to enter onto the property of Union Pacific. Any contractor employee who refuses to provide consent to a background check will not be allowed to provide services to the Union Pacific Railroad.
- Railroad Contractors will submit necessary employee information to the "e-RAILSAFE program" via the website.
- Contract employees (Contractees) will be required to provide their electronic photo to the contractor, for their submittal to the e-RAILSAFE program. The Contract employee will then complete the on-line training for Railroad Safety and Railroad Security Awareness via "e-RAILSAFE program's" website.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

- After the Contractee satisfactorily completes the training program, a background investigation is initiated.
- The “e-RAILSAFE program” will then score that investigation to validate that it meets all the criteria for the issuance of a photo identification badge.
- When a satisfactory score is rendered, the “e-RAILSAFE program” will automatically print a photo identification badge and mail the photo identification badge to the Contractor’s business address for distribution to the Contractee.
- The Contractee is responsible to wear the approved badge, as well as carry another form of government issued ID on them at all times when on railroad property. Contractor employees without the identification card will not be allowed to work or on Union Pacific property. If already on our property, the contractor employee will be required to leave until the appropriate ID card is obtained. Employees leaving the employment of a contractor must surrender the identification card to either the contractor or to Union Pacific.

UPRR will conduct unannounced audits to inspect employees government issued photo I. D’s to ensure they match of the employees’ contractor identification card. Contractor personnel unable to provide both forms of identification will be removed from UPRR property.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

8. SYSTEM STANDARDS AND INTEGRATION

8.1 System Vision

In conjunction with IDOT and using the Service Development Plan as the basis, the PMC will develop a Vision Statement for Chicago-St. Louis high speed rail and enhanced passenger services to be offered and the configuration of the transportation system necessary to deliver that service. The Vision Statement will address issues of service branding and brand management. Using Public Involvement resources, the PMC and IDOT will vet the initial vision with the potential customer base (the public) to refine the Vision Statement. The PMC will provide for periodic review of the vision statement and the service program which delivers on the vision. The work will include liaison with the immediately adjacent states and Amtrak in this iterative process.

8.2 System Concept and Integration Plan

In accord with the System Vision, the PMC will establish a plan for system configuration, including but not limited to station locations, platform types, track configuration, signal and communication system configuration including Positive Train Control, motive power and passenger equipment configuration, maintenance standards and methods. The PMC will provide a plan to assure all system components function as a unit, including training and certification requirements for system operation.

8.3 Technical Standard Development

The PMC will establish technical standards, and detailed specifications for track construction and maintenance (suitable for sustained 110 MPH passenger train operation, but also recognizing the requirements of the various types of freight services which will continue to operate on the Chicago-St. Louis Corridor), the 110 MPH-capable passenger equipment and motive power, communications and train control systems, maintenance (appropriate for dealing with the diverse needs of this mixed-use corridor), operating and station facilities. (for both the "IL-Dwight-St. Louis-Corridor Improvement Program" and the "IL-Chicago-St. Louis-Double Track" projects).

These ranges of capital investments affect the layout and design of the physical plant and the station facilities. For example, in the double-track project, many stations will have second platforms installed, each of which must have the full range of amenities installed (consistent with Amtrak guidelines and standards). The platforms themselves will be ADA compliant, and will have grade-separated, ADA-compliant passenger access provisions installed at that time.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

8.4 Operating Standards

8.4.1 Operating and Safety Rule Integration

In cooperation with Amtrak, the host railroads and the FRA, the PMC will review and supplement as appropriate for passenger operations, the Operating and Safety Rules. This effort may include provision for the acceptance of changes and modification of Rules by the host railroads. The implementation of high-speed passenger train operation, double-tracking of the complete corridor and the consequent increase in the volume of high-speed passenger train movements, may introduce new and/or unique rules and operating procedures requirements.

This effort will include a joint PMC, Amtrak and host railroads rules and procedures committee (or similar) to develop and refine the rules and procedures required to safely conduct Corridor operations.

8.4.2 Training Standards

In cooperation with Amtrak, the host railroads and the FRA, the PMC will establish a program of training for operating personnel to assure a safe operation in compliance with the Operating and Safety Rules established. This effort will include the necessary certification, licenses and permits needed to safely and reliably operate this joint-use, high-speed corridor and to ensure that a high standard of customer service is delivered by all crews, each and every day.

As with the rules and procedures committee, a training standards committee approach may be used as the delivery method.

8.5 Railroad Interface

The PMC will provide for the review, comment and acceptance of the system configuration, technical standards and specifications, system integration and operating standards by Amtrak, the host railroads and the FRA.

8.6 FRA and ICC Interface

The PMC will provide for the review, comment and acceptance of system configuration, technical standards and specifications, system integration and operating standards and rules by regulatory agencies with jurisdiction. Note that direct FRA involvement in the rules and procedures process is proposed above.

8.7 Customer Service Standards

Amtrak, the host railroads, IDOT, and the PMC will collectively work to establish train schedules that provide transportation service optimized to the dominant trip purposes on the Chicago-St. Louis Corridor, as identified by the ridership forecasting exercise.

UPRR will perform, with PMC review, performance modeling using the RTC simulation model. The PMC will coordinate acceptance of the train schedules by, IDOT, Amtrak and the host railroads. The PMC will ensure that coordination with key connecting services in Chicago and St. Louis is reflected in the simulation, and that these connections are optimized.

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

The PMC, with potential support from a PTB consultant, will specify desired standards for station operations and convenience, including personnel, cleanliness, ticketing and reservation access, security provisions, sanitary provisions, parking, baggage handling, ADA provisions, groundside transportation, food service, sundry service and other foreseeable customer amenities. IDOT, UPRR, and Amtrak will review and approve these specifications.

The PMC, with potential support from a PTB consultant, will establish standards for the provision of on-board customer services as are necessary or customary to passenger transport on a high-density corridor operation, such as the Chicago-St. Louis service will transition to. These standards shall include but not be limited to baggage provisions, environmental control, sanitary facilities, food service, internet access, ticket validation, emergency communication and egress, and on-board announcements. IDOT and Amtrak will review and approve these standards.

8.8 Special Studies and Investigations

As identified and necessary, the PMC with PTB consultant support, will provide methods to meet any requirements for special studies or investigations deemed necessary by IDOT, Amtrak, the FRA or the PMC to establish the safe and efficient operation of the Chicago-St. Louis High-Speed Rail Corridor. These studies have not yet been identified.

8.9 Engineering Consultant Oversight

8.9.1 Design Reviews

The PMC will provide for periodic review of standards and designs being developed by the section or facility design teams, whether contracted by IDOT, Amtrak, the host railroads or other entities. The PMC will establish formal standards of review and reporting of findings, comments, corrections and recording of final designs and modifications. The PMC will establish a system of configuration control and design acceptance.

8.9.2 QA/QC Audits

In accordance with the Program Quality Management System (as defined in Section 6), the PMC will require that all subcontractors shall have a conforming QA/QC plan for their specific assignments. The default position will be that the subcontractor will adopt all requirements of the PMC's QA/QC Plan for their work.

Regardless of the source of the QA/QC Plan governing the work of an individual subcontractor, the PMC will require periodic audits on the QA/QC plan implemented by the subcontractor. These audits will consider preparation of plans and other documents, as well as manufacturing and construction activities, depending on the specific role and responsibility of the subcontractor. The audit procedures will be set forth, along with the process for identifying such occurrences and non-conformances, the review and reporting of same and the method for resolving these occurrences.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

8.10 Value Engineering

The PMC will establish a system of value engineering reviews jointly between the PMC and the designers/other subcontractors to assure that the technical standards of all elements of the program are being met at a minimum life cycle cost.

The PMC will provide for the period review of design and manufacturing/construction cost estimates to ensure that sound value engineering principles are being applied throughout the process. The process for identifying cost reductions/method changes will be identified, along with reporting procedures and the method for resolving discrepancies.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

9. PROGRAM EXECUTION

9.1 Environmental Clearance and Compliance Oversight

The PMC will conduct oversight of the program team to assure compliance with the requirements of the environmental clearance as required by the National Environmental Protection Act.

The PMC will oversee the development of project-level NEPA documents, as required, to support the Project. Necessary NEPA work, assumed to be re-evaluation documents, Categorical Exclusion or Environmental Assessment, will be performed if curves, turnouts, grade crossings, signals, easements, stations or other construction related activities fall outside the provisions of the ROD.

Field surveys will be conducted to review the project corridor to ensure that construction limits are contained within the ROD footprint. FRA has provided guidance indicating that the ROD footprint is defined as the existing railway roadbed. Additional coordination with FRA is currently underway to clarify this definition, namely whether this includes the existing fore-slopes, ditches, or areas of previously removed 2nd track / yards.

The PMC will conduct environmental surveys and the creation of other documentation required by NEPA to allow work outside the ROD limits. If construction is anticipated to extend outside the existing roadbed, the project team will initially prepare a FRA Categorical Exclusion (CE) worksheet and submit to FRA for approval. A field visit will be conducted prior to construction to review any work areas with the potential to extend beyond the existing roadbed. A summary report of these field trips will be prepared and provided to FRA for concurrence.

A mitigation database will be developed to track and ensure that any commitments identified are implemented during construction. A review of county and municipal codes will be conducted to identify any local requirements that need to be implemented as part of the planning, design or construction for the program. A sustainability plan will be developed for the program covering environmental, economic and other areas. Review of the overall program to identify areas of opportunity for sustainability practices.

9.2 Design

Design tasks will be combined effort by the PMC, UPRR and its consultants, and other PTB Consultants selected by IDOT (see PMP section 4.2).

The PMC and PTB Consultants will perform design services that include specification development and design of civil and roadway facilities, communication and signal systems, operating and maintenance facility architecture, station architecture and oversight of rolling stock design, manufacture and delivery. The PMC will manage and oversee the PTB Consultant.

UPRR and its consultants will perform signal design, operations simulations, and develop / oversee the engineering and operational impacts for the capacity addition and modifications to UPRR and related mainline tracks. This also includes design activities for second mainline tracks, sidings, interlocking, related civil and drainage, related signal improvements, and highway/rail crossing warning device upgrades. UPRR consultants will provide Hydrologic and

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Hydraulic evaluations for the structures along the Corridor, Environmental/Floodplain permitting for the structures as well as the new construction project areas, surveying/ mapping, and ARRA reporting.

The PMC will review UPRR designs for compliance with the technical standards and the ability of the design to meet the expectations of the system plan and the expectations of IDOT, Amtrak, the host railroads and the FRA, as appropriate.

See the Corridor Improvement Program – Statement of Work for a detailed description of design activities.

9.3 Right of Way Acquisition

Right of Way acquisition will be required to accommodate certain re-aligned curves, for improved grade crossing approaches, stations, and for other improvements. Once UPRR completes its aerial survey, properties required for curves, easements, crossings, stations, turnouts and/or signals will be identified. IDOT, the PMC, and UPRR will evaluate benefits, costs, and impacts and will jointly agree properties to acquire. The PMC will assure compliance with IDOT and host railroad requirements for right of way acquisition and compliance with federal rules regarding right of way and NEPA documentation.

1. If acquisition is needed; IDOT will request that UPRR acquire the real property and/or easements. Note, property and/or property rights may be needed for the Corridor Improvement Program. Other than stations, UPRR will be responsible for this task. Acquisition of property/rights for stations is the responsibility of IDOT and/or the affected community.
2. IDOT does not have eminent domain authority as it pertains to intercity rail service. State law, at 20 ILCS 2705/2705-440 (Intercity Rail Service) specifically states that IDOT: “shall not have the power of eminent domain”.
3. If eminent domain must be used to procure real property rights (including easements), IDOT will request that Union Pacific Railroad (“UPRR”) use its eminent domain authority to complete the acquisition. Per the July 16, 2010 construction agreement between IDOT and UPRR, at Attachment C, UPRR agrees to comply with the Uniform Relocation Assistance and Real Property Acquisition Policies Act, as amended (42 USC sec. 44602 et.seq.) and the Uniform Relocation and Real Property Acquisition for Federal and Federally Assisted Programs (49 C.F.R. Part 24), with respect to the project.
4. If property is to be acquired which does not involve eminent domain, UPRR will still comply with the regulations stated in #3, above.
5. IDOT recognizes FRA’s direction that real property interests acquired for the project be located within the Project limits.

9.4 Utility Relocation

The PMC will assure that utility relocations are accomplished in accordance with the design and are compliant with all agreements and other procedures the host railroad may have in place governing utility location on the right of way.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

9.5 Roadway Projects

The PMC and IDOT will provide for field inspection, progress meetings, QA/QC audits, safety reviews and invoice reviews to assure that the design and construction of roadway facilities meet the contractual requirements and technical standards of the PMC, IDOT, Amtrak, the host railroads, the FRA and the ICC.

The following technical task force has been assembled to perform grade crossing diagnostics. Local authorities and private landowners will be involved as required to assure that all appropriate stakeholders are included in the investigative and decision making process for potential roadway projects.

Road Crossing Diagnostic Team	
Mike Garcia	IDOT – Rail
Jeff Harping	IDOT – Local Roads
Priscilla Tobias	IDOT – Safety
Kyle Armstrong	IDOT – Safety
Marshall Metcalf	IDOT – Safety
Steve Lynch	IDOT (consultant) – Safety
Kim Kolody	IDOT (consultant) – Safety
John Blair	ICC
Stan Milewski	ICC
Dan Powers	ICC
Mike Stead	ICC
Brian Vercruysse	ICC
Richard Hoffman	Amtrak
Rod Dillenburg	UPRR
John Enice	UPRR
Patrick Halsted	UPRR
David McKernan	UPRR
Dave Orrell	UPRR
Dave Peterson	UPRR
John Venice	UPRR
Tom Hunter	PMC (PB)
Art Peterson	PMC (PB)

9.6 Communication & Signal Projects

The Corridor Improvement Program will be implementing PTC on the UPRR's Joliet and Springfield Subdivisions, from Dwight to Q Tower, to meet Congressionally-mandated 2015 deadline. After the PTC system is designed by UPRR, the proposed system will need to be reviewed and approved by the FRA Office of Safety prior to its implementation. Due to the time required to design and obtain approval of the PTC system, the Project segment from Pontiac to

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

Dwight will utilize cab signals for the initial 110 mph operations. The cab signals will be replaced with PTC after design and approval is complete.

Scope includes software development, acquisition of communications and radio spectrum, GPS systems, new computer-aided train control and dispatch systems, installation of equipment along the right-of-way, signal relocations, installation of on-board equipment (in the locomotives and cab cars) and integration and testing of the system. Scope includes PE, FD, installation, testing and training.

The PMC will provide for field inspection, progress meetings, QA/QC audits, safety reviews and invoice reviews to assure that the installation and testing of all communications and signal systems meet the contractual requirements and technical standards of the PMC, IDOT, Amtrak, the host railroads, the FRA and the ICC.

9.7 Operating and Maintenance Facility Projects

The PMC will provide for field inspection, progress meetings, QA/QC audits, safety reviews and invoice reviews to assure that the design, construction, equipping and testing of operating and maintenance facilities meet all contractual requirements and technical standards of the PMC, IDOT, Amtrak, the host railroads, the FRA and the ICC.

9.8 Station Facility Projects

The scope of the station projects will include conducting the public involvement process and environmental review, conceptual site layout and design, PE, FD, and construction. The PMC along with a PTB Consultant selected by IDOT and managed by the PMC will provide for field inspection, progress meetings, QA/QC audits, safety reviews and invoice reviews to assure that the design, construction, equipping and testing of station facilities meet all contractual requirements and technical standards of the PMC, IDOT, Amtrak, the host railroads, the FRA and the ICC.

The stations to be upgraded include Dwight, Pontiac, Lincoln, Springfield, Carlinville, Alton, and East St. Louis. Bloomington-Normal will be improved by others outside the Corridor Improvement Program.

9.9 Rolling Stock Development

9.9.1 Rolling Stock Procurement

The rolling stock procurement task will be performed by the PMC along with a PTB Consultant selected by IDOT and managed by the PMC. The exact timeline for these tasks is dependent on the acceptance and release of the PRIIA Section 305 specifications by that committee's executive leadership. Rolling stock procurement includes the acquisition of both locomotives and rail cars. Grantee anticipates that its current operator, Amtrak, will maintain the current equipment. Maintenance of new equipment could be performed by another.

IDOT and the PMC will submit a Fleet Management Plan for FRA consideration. The PMC and PTB consultant will Requests for Information preparation; discussions with manufacturers on industry-wide practices (also known as the "industry review" process); specifications development; competitive bidding/Requests for Proposal ("RFP") preparation; equipment design

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

and manufacturing; design review and technical oversight; on-and-off-site manufacturing quality assurance/quality control, equipment packaging and delivery; operator and maintainer training, equipment acceptance testing; maintenance and training manuals; spare parts and tooling; and revenue service operations implementation

The PMC will also conduct pre-award and post-delivery “Buy America” audits in compliance with federal requirements for these rolling stock procurements. Ensure that the appropriate certifications regarding the meeting of the purchaser’s requirements are completed for the locomotive and car procurements at both the pre-award and post-delivery stages.

Additionally, the PMC will ensure that an appropriate test program at the Association of American Railroads center in Pueblo, Colorado leading to certification of the locomotives and cars as being suitable for sustained operation at 110 MPH is successfully completed. Similarly, the test program must include extensive pre-revenue testing on the entire Corridor.

9.9.2 Interim Improvements

The project segment from Dwight to Pontiac is scheduled for 110 mph operation in 2012. However, the new rolling stock described above will not be available by 2012. As a result, the existing Amtrak rolling stock will be modified and rehabilitated for safe 110 mph operation. At this time, it is assumed that P-42 locomotives, or modified P-40 locomotives, will be used at each end of the consist. The PMC will identify interim equipment improvements required for safe operation of the initial 110 mph service. These improvements (to be determined) will include rolling stock modifications to add cab signaling equipment as well as cosmetic improvements. Amtrak will manage and implement the proposed equipment modifications.

9.10 Schedule and Budget Coordination

The PMC will monitor schedule and budget adherence by its management and staff and by all other program team members. This review shall identify any non-conforming results along with a plan for corrective action. Follow-up review and reporting shall ensure that the correct actions have brought the result back into conformance/expectations. The PMC shall be fully cognizant of schedule and budget review, coordination and reporting requirements, as well as any updated/modifications. The PMC shall regularly report to IDOT on schedule and budget adherence and progress. The PMC shall establish schedule recovery plans with program team members as may be required to ensure that all scheduling objectives in this program are met.

9.11 Construction Oversight

IDOT’s role is not to directly supervise the work performed by a railroad owner. Rather, IDOT will provide construction oversight and inspectional services through the use of site inspectors guided and directed by the resident engineer. IDOT’s role includes:

1. Reviewing whether construction is performed and executed in accordance with the contract documents, and appropriate engineering and safety practices;
2. Determining whether work is performed and completed within the time frame of the contract;
3. Determining whether invoicing and changes, if any, are properly documented, reviewed and promptly processed;

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

4. Determining that pay estimate quantities are accurate and a true representation of actual material delivered, installed and contains sufficient supporting documentation which meets the quality guidelines in order to recommend payment;
5. Determining whether that material acquired, delivered, stored and incorporated into the work is free from manufacturer's defects, shipping/freight and handling damage;
6. Ensuring that materials and products delivered, installed and commissioned are verified and in according to the contract documents, guidelines and engineering standards;
7. Other oversight work not specifically identified, but which is related to IDOT's oversight role; and
8. Recommending appropriate cooperative and/or corrective action and remedies (such as, but not limited to, cure notices, pursuing warranty claims and breach of contract consideration) if products and/or are non-compliant with the construction agreement between IDOT and the UPRR and/or applicable UPRR material specifications.

9.12 Reporting

Various reports will be provided for the Program. The type of project and the funding source will affect the type of report provided. Typical reports include (but are not limited to) the following:

1. Engineering – actual engineering efforts expended and a listing of deliverables.
2. Construction:
 - a. Daily status reports
 - b. Reports to relate work in place against developed budget
 - c. Turnout/switch construction report
 - d. Bridge repair report
 - e. Grade crossing installation report
3. Labor and material contract report
4. Accounting reports to indicate performance against budget
5. Invoice to Date reports – forms the basis for monitoring an overall agreement
6. Prevailing wage compliance report
7. Disadvantaged Business Enterprise report
8. As-built/As-installed drawings, calculations, reports and illustrations
9. QA/QC reports
10. Funding report requirements (e.g., those required by FRA)

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

10. SYSTEM INAUGURATION

10.1 Equipment Testing and Acceptance

As set forth above, the PMC will establish and conduct a program of equipment testing and acceptance, including as applicable, acceptance or certification by regulatory agencies with jurisdiction. Equipment includes rolling stock and motive power including on-board equipment, maintenance equipment, communication and train-control systems, ticketing and reservation systems (as applicable).

10.2 Final Inspections and Acceptance

The PMC will establish and conduct a program of final inspection and acceptance of fixed facilities including roadway, operating and maintenance facilities and stations. Furnishings shall be inspected for compliance with all technical requirements and in appropriate condition.

10.3 Training

The PMC will establish and conduct a program of training of operating, maintenance and customer-service personnel to meet any certification and licensing requirements, become proficient in the execution of emergency procedures and to meet customer service expectations. The PMC will review the training program and seek acceptance from IDOT, Amtrak, the host railroads and regulatory agencies with jurisdiction.

10.4 System Testing

As described in above, and in accordance with the requirements of IDOT, Amtrak, the host railroads, the FRA and the ICC, the PMC will conduct a program of pre-revenue service testing with successful completion of the test program being a mandatory step prior to commencing revenue operations on the Chicago-St. Louis Corridor.

10.5 Regulatory Authority Acceptance (Permits)

The PMC will verify all required regulatory agency acceptances, permits, licenses and certifications are obtained.

These permits are anticipated to include:

- Joint Permit Application: USACOE 404/ IEPA Section 401/ IDNR
- National Pollutant Discharge Elimination System (NPDES)
- County or township road closures
- State Road Closures
- Interagency Wetland Policy Act (IWPA)
- Utility Easements

ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR CORRIDOR IMPROVEMENT PROGRAM

The PMC will be responsible for ensuring compliance with Section 7 of Endangered Species Act of 1973 and NEPA requirements as described in Section 9.1 above.

1. NEPA Document (not a permit but required prior to construction), see Section 9.1
 - NEPA documentation is required by FRA for any federally funded project.
 - Work contained in Record of Decision (“ROD”). If work is outside of the ROD and there are no significant impacts, FRA may allow a reevaluation document.
 - IDOT PMC is responsible NEPA documentation.
2. Joint Permit Application (USACOE 404/ IEPA Section 401/IDNR)
 - Joint Permit Application required by: US Army Corp of Engineers, Illinois Environmental Protection Agency; and the Illinois Department of Natural Resources
 - Needed when proposed work is within 100 year regulatory flood plain (includes impacts to wetlands)
 - IDOT PMC is responsible for obtaining this permit
 - The Project is in two USACOE districts (Rock Island and St. Louis). May require two separate permit applications. Note, however that the St. Louis Corps district may coordinate the projects with Rock Island and then take jurisdiction of the needed permits. Corps may process is as a NWP 33 (used in the past for other shovel ready ARRA projects). Often, the NWP 33 can be processed in a short time period, based on field screening rather than full wetland delineation.
3. National Pollution Discharge Elimination System (“NPDES”)
 - NPDES required by Illinois Environmental Protection Agency
 - Needed when more than one acre of earth is disturbed
 - UPRR is responsible for acquiring the NPDES permit
 - Includes a Storm water Pollution Prevention Plan (“SWPPP”). NPDES are required if IEPA considers this a large project. It may not be required if IPEA deems the construction pads as 12 individual projects. Note, an NPDES this permit may be contractor based if it works on several sites that are greater than one acre.
4. County or Township Road Closures
 - Permit required by County Engineers (Madison, Jersey, Macoupin, and Sangamon) when any road closure is required
 - UPRR is responsible for obtaining these permits

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

5. State Road Closures

- Permit required by IDOT Maintenance Engineer, Districts 6 (Springfield) and 8 (Collinsville)
- Required if any State road closure is required
- UPRR is responsible for obtaining these permits

6. Section 7 of Endangered Species Act of 1973

- Permit required by the US Fish and Wildlife Service
- Permit is required if any endangered species is identified
- Responsible for obtaining permit: IDOT PMC

7. Utility Easements

- Required by various utility companies in the Project area
- UPRR will acquire utility easements

10.6 Owner Acceptance

As required in the PMC agreement, the PMC will seek and obtain acceptance of the Chicago-St. Louis High-Speed Rail Corridor by IDOT, Amtrak and the host railroads.

10.7 Ready for Operation Declaration

Upon obtaining all required acceptances and when meeting its own satisfaction, the PMC, IDOT, Amtrak, the host railroads, the FRA and the ICC shall declare the Chicago-St. Louis High Speed Rail Corridor Ready for Operation.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

11. ENTERPRISE MANAGEMENT

The PMC shall establish a plan for the management of the revenue operations phase of the Chicago-St. Louis Corridor. The plan will provide for the procurement of an Operator (this is assumed to be Amtrak, the operator of the existing Chicago-St. Louis passenger rail service, but a formal process will be required). The revenue service management plans should account for the following major expense categories: General & Administrative costs; Marketing and Sales; Ticketing and Reservations; Security and Safety Management; Insurance Program and Claims Settlement; Legal Representation; Facility and Asset Management; Revenue and Cost Accounting; Operating Department Management; On-Board Service; Maintenance of Equipment; Maintenance of Way; Customer Service Department Management; Internal Auditing and Quality Management; and on-going interface with the service operator, the host railroads and other key entities.

**ILLINOIS HIGH SPEED INTERCITY PASSENGER RAIL
PROJECT MANAGEMENT PLAN FOR CHICAGO-ST. LOUIS CORRIDOR
CORRIDOR IMPROVEMENT PROGRAM**

12. APPENDICIES

Two appendices are included as part of this PMP. They include:

Appendix A – Corridor Improvement Program Construction Schedule

Appendix B – Concrete Tie QA/QC Plan – 10/19/10

Applicant: State of Illinois - Illinois Department of Transportation
Application Number: HSR2011000498

LETTER OF CERTIFICATION

The Illinois Department of Transportation has developed a comprehensive Financial Plan for the IL-Chicago-St. Louis Corridor Supplement in accordance with the Service Development Programs Application Package Instructions issued on March 4, 2011 for the March 2011 Notice of Funding Availability. The Financial Plan provides cost estimates to complete the project and estimates of financial resources to be utilized to fully finance the project.

The costs contained in the Financial Plan are estimates based on a conceptual design without detailed engineering or site investigation. The quantities and costs are estimated using readily available information and experience with similar projects. These costs will be refined throughout the final design phase as project details become available. Costs will also be updated during the construction phase as projected costs turn into actual expenditures, and cost escalation (inflation) factors for out-year expenditures become more reliable. These costs are based on Union Pacific Railroad's experience, cost estimating practices and procedures to develop an order of magnitude quantity and unit costs for the majority of the work. These costs were reviewed by IDOT and its program manager, Parsons Brinckerhoff. These costs will be refined as the Project moves through the final design and construction, and more information becomes available on unit costs and site conditions.

To the best of our knowledge, the Financial Plan submitted herewith, fairly and accurately presents the State of Illinois' ability to finance the subject project as well as the cash flows and anticipated conditions for the project's life cycle. Further, to the best of our knowledge, we have made available all significant information that we believe is relevant to the Financial Plan.

A handwritten signature in blue ink that reads "Michael R. Garcia".

FINANCIAL PLAN

***IL-CHICAGO-ST. LOUIS CORRIDOR
SUPPLEMENT-SDP***

April 4, 2011

Illinois Department of Transportation

Bureau of Railroads

FINANCIAL PLAN

IL-Chicago-St. Louis Corridor Supplement Grant Application (Service Development Program)

The purpose of this Financial Plan is to document the recent and forecasted financial condition of the Illinois Department of Transportation (“IDOT”), and others, that will provide capital and/or operating funding for the Chicago – St. Louis Corridor Supplement improvement project (“Project”).

A. Introduction

The Chicago-St. Louis rail corridor (“Corridor”) has been an integral part of the U.S. passenger rail network and was part of the original Amtrak network. The state of Illinois (“State”) has supported the operation and improvement of rail service as well as the enhancement of the physical aspects of the Corridor for over 40 years. Currently, five daily passenger trains operate on the Corridor at speeds up to 79 mph; four trains are Lincoln Service corridor trains, with the operation of three round trips funded by the State; and a fifth is the long distance Texas Eagle service, which operates southwest of St. Louis and beyond the Corridor.

In 2009, the Federal Railroad Administration issued a notice of funding availability (“NOFA”) for the High Speed Intercity Passenger Rail (“HSIPR”) program. The State was awarded \$1.202 billion in funds for the HSIPR project which will allow it to make improvements to increase passenger rail speed in the Corridor up to 110 mph (See Cooperative Agreement between FRA and IDOT, number FR-HSR-0015-11-01-00 and amendment number one to the agreement, FR-HSR-0015-11-01-01, December 2010) (“2010 Grant”). The geography covered by the 2010 Grant award extends from Dwight to the East St. Louis area.

In March, 2011, the FRA issued a new NOFA. This Financial Plan supports IDOT’s application for additional Corridor improvements, in response to the March 2011 NOFA. The proposed additions will cause tracks north of Dwight to be upgraded, add PTC north of Dwight, add a siding and extended second main track, and provide additional safety to rail passengers, freight operators and the public.

B. Project Description and Benefit

The Project site is located entirely in the State of Illinois on UPRR’s Joliet and Springfield Subdivisions. The Project is composed of five Tasks:

Task 1. Siding and Extended Second Main Track. This task consists of constructing a new passenger siding (two miles) at Mazonia, approximately seven miles of new extended second main track (between Elwood and Joliet IL). This task includes the installation of centralized traffic control. By making these improvements, existing medium and long-distance Amtrak service would benefit. Freight benefits and operating flexibility will also result.

Task 2. Track Upgrades. The 2010 Grant statement of work stated that IDOT will perform a limited set of improvements (not ALL improvements) for the Corridor area from MP42.8 to MP72.8. The statement of work never contemplated that all first main track upgrades from 42.8 to 72.8 would be constructed with the 2010 Grant funds; nor did it contemplate any improvements from MP36.7 to MP 42.8. Upon receipt of revised estimates from the Union Pacific Railroad (UPRR), IDOT has determined that the 2010 Grant funds will allow some of the upgrades between MP54 and MP72.8 to be completed. Consequently, this application seeks funding for the completion of first main track upgrades between MP MP54 and MP72.8 and for main track upgrades on the remainder of the Corridor, 18 miles from MP36.7 to MP 54 (between approximately Wilmington and Joliet IL). Completing this task will allow track readiness for increased speeds up to 110 mph operation between approximately Dwight and Joliet IL.

Task 3. PTC. The 2010 Grant includes funds for PTC improvements from MP72.8 to MP281. This application seeks funding to equip the existing first main track and proposed second tracks with PTC between Dwight and Joliet, IL (37 miles from MP36.7 to MP72.8);

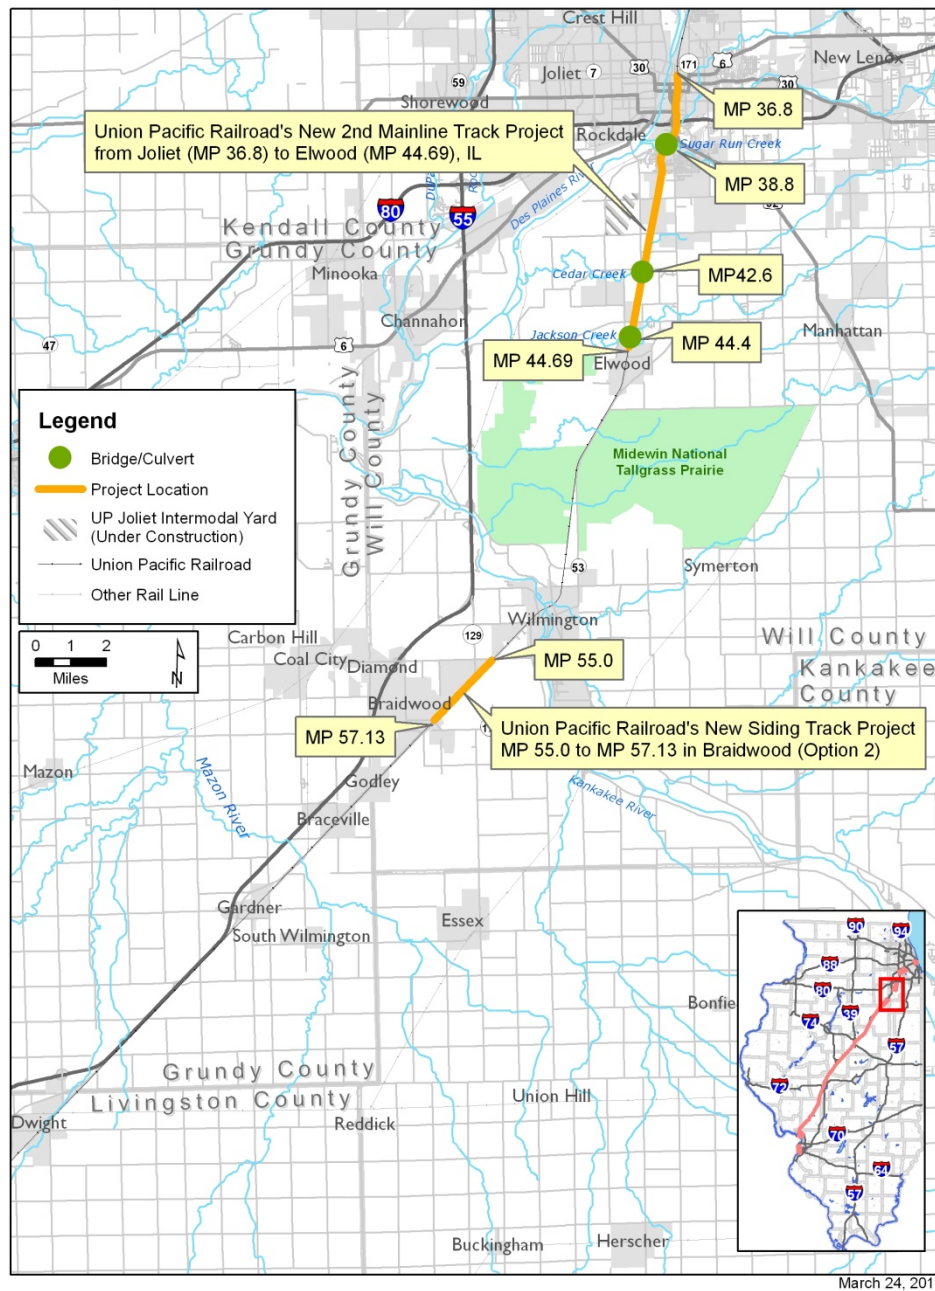

Task 4 Private/Farm Crossings. This task involves the additional upgrade of the private crossings and the farm crossings (33 total) between Dwight and East St. Louis beyond the basic upgrades included in the 2010 Grant. This funding is needed to comply with recent local agreements and FRA direction which now includes four quadrant (sometimes referred to in this application as 4-quad gates) and other additional enhancements;

Task 5 ROD Study. This involves conducting a "lessons learned" documentation/study on the work included in the 2010 Grant and related IDOT-funded high-speed rail projects by RTEC/University of Illinois-Urbana-Champaign; and,

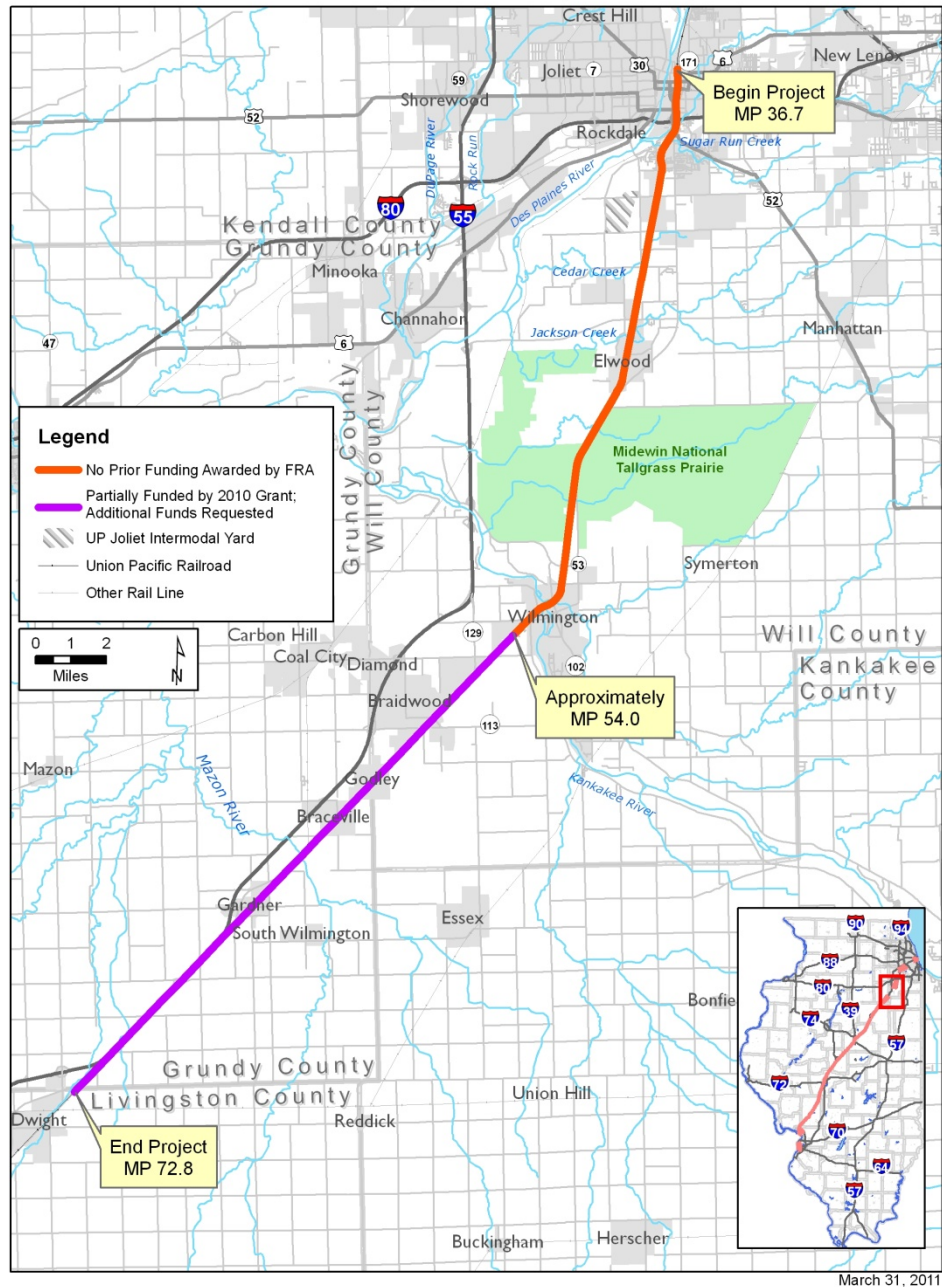

Task 6 Program Management/Construction Administration - provides for the IDOT Program Management Consultant (PMC) team and other consultants to manage the design, construction and implementation of the discrete projects included in this application for Chicago-St. Louis Corridor Supplement program. This task also provides for additional QA/QC oversight of construction and the concrete ties (including continuation of the sampling, testing and analysis process) to be used in the track construction projects between Joliet and Dwight, as listed above.

C. Location of Tasks (except Task 6 which does not involve construction)

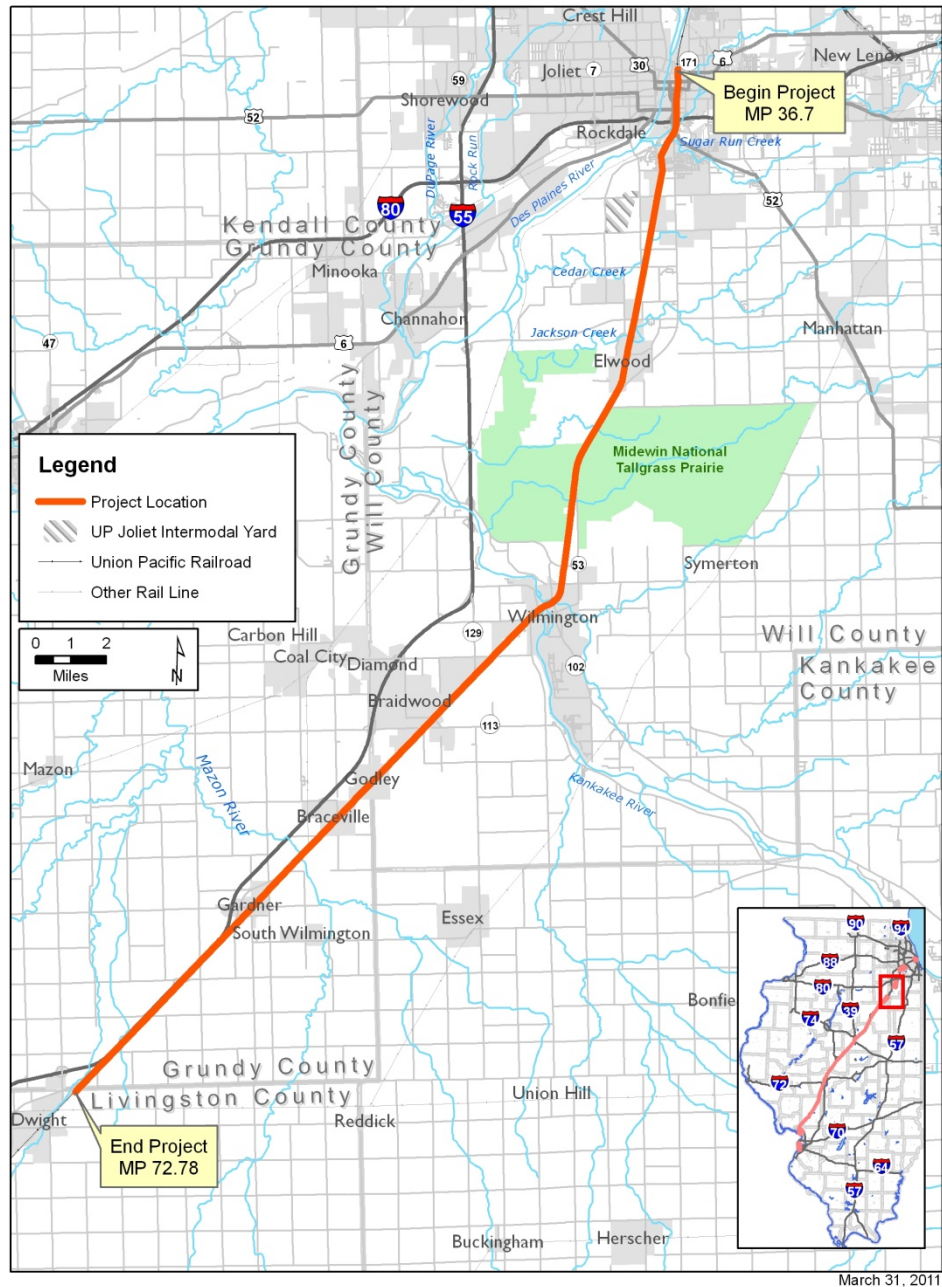

Chicago - St. Louis Corridor Supplement Siding and Extended Second Main Track (Task 1)

Chicago - St. Louis Corridor Supplement Track Upgrades (Task 2)

Chicago - St. Louis Corridor Supplement PTC (Task 3)

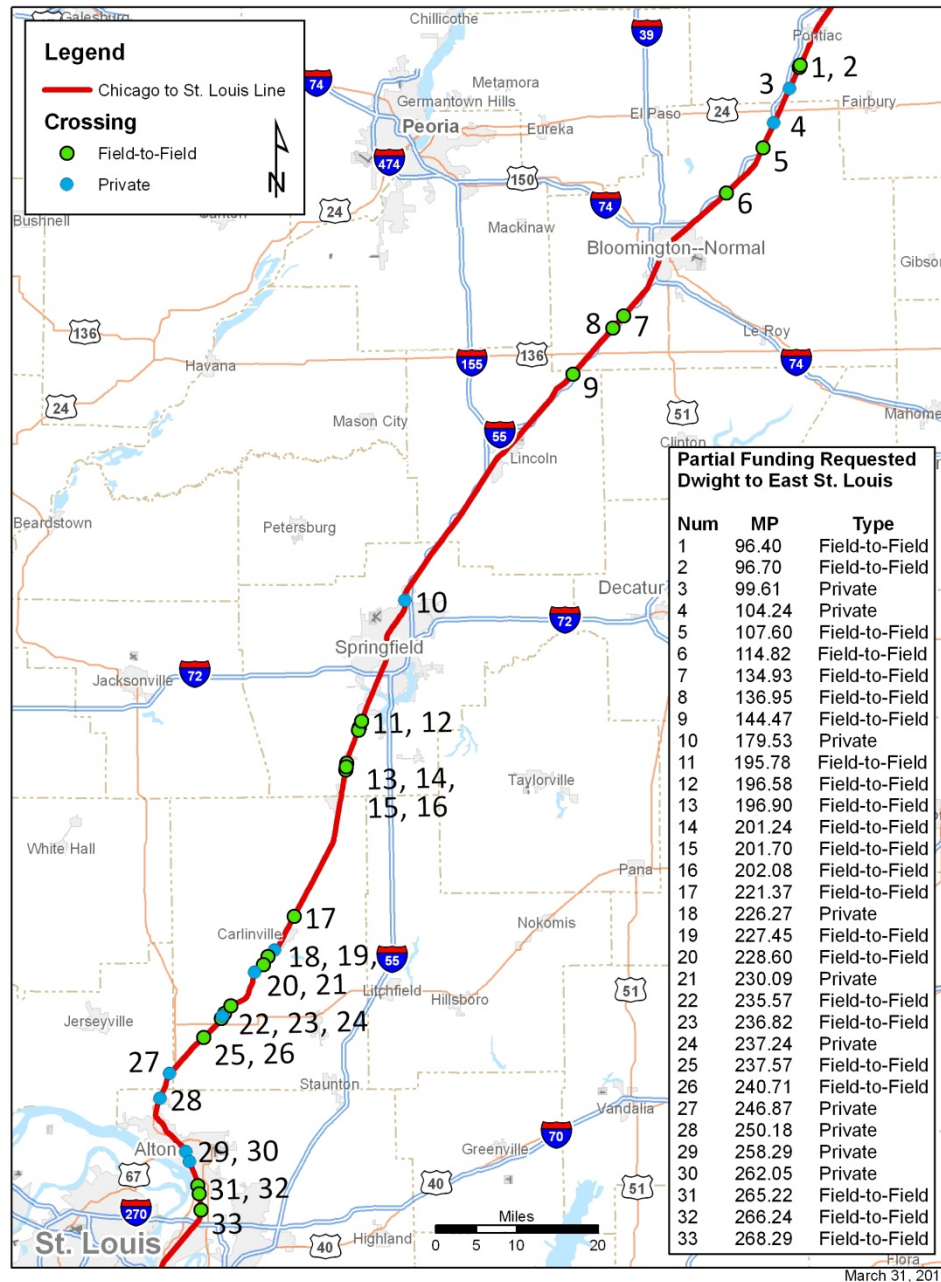

8

Chicago - St. Louis Corridor Supplement

Private & Farm Crossings (Task 4): 2 of 2

Chicago - St. Louis Corridor Supplement ROD Study (Task 5)

D. Project Limits

The proposed projects are located on the Union Pacific Railroad's Joliet and Springfield Subdivisions within the State of Illinois. Mile post limits for the specific tasks are as follows:

Task 1 – MP55 to MP 57.13 (siding); and, MP 36.8 to MP 44.69 (extended second main)

Task 2 – MP 36.7 to approximately MP 54

Task 3 – MP 36.7 to MP 72.78

Task 4 – MP 36.7 to MP 281

Task 5 – The study area will cover MP72.78 to MP281. (Note, this includes the geographic span of tasks 1 – 3 of the application, from MP36.7 to MP72.78.)

Task 6 – No geographic area as this task involves project management and construction administration.

E. Project Timeline

The estimated timeline for each of the proposed tasks is as follows:

Task 1 (Siding and Extended Second Main Track) – 01/2013 to 12/2014

Task 2 (Track Upgrades) – Second quarter of 2012 to 06/2015

Task 3 (PTC) – Immediately, to 12/2015

Task 4 (Private and Farm Crossings) – Immediately to 12/2014

Task 5 (ROD Study) – In three phases from 04/2011 to 03/2014

Task 6 (Program Management and Construction Administration) – Immediately upon grant award through 12/2015.

TOTAL TIMELINE – Immediately, through 12/2015

F. Program Structure

Illinois Department of Transportation

As the applicant for the subject funds, IDOT will serve as both the technical and administrative head of the program described in the grant application. IDOT will dispense local, State and Federal funds invoiced against specific agreements necessary to effectuate the grant funds. Additionally, IDOT currently develops infrastructure improvements and re-improvements along the Corridor and contributes to the operating costs of passenger services between St. Louis and Chicago.

IDOT previously procured a Program Management Consultant (PMC), Parsons Brinckerhoff (PB) to augment the IDOT staff on the Chicago-St. Louis Corridor high speed rail project. PB will continue to act as the PMC if funds are awarded through this application. The PMC will serve as the owner's representative in the execution of the grant. Among other things, the role of the PMC is to manage the program implementation, coordinating including the wide-range of interdependencies between standards, designs and projects that comprise the overall program.

The State's highway system consists of more than 16,000 miles, including 2,050 miles of interstate roads, of which 282 miles are tollway, comprising the third largest system in the nation. Illinois also boasts 52 public transit systems serving an average of 600 million passengers a year, for which IDOT provides technical and financial assistance. Among these is the Regional Transportation Authority in Chicago, which oversees the second largest public transportation system in the nation. Another transportation asset is Illinois' airport system, the second largest in the nation, which includes 138 airports, 280 heliports, and nine balloon ports. The largest, Chicago's O'Hare International, serves more than 76 million passengers annually¹, making it the second busiest airport in the United States.

Illinois' rail program, one of the nation's strongest, it includes both freight and passenger components. Its long-term commitment to passenger service is demonstrated by the State's General Assembly providing support from the general revenue fund for operating subsidies and capital improvements since 1971. The freight program provides grants and low interest financing to capital rail projects that benefit economic development in Illinois. Projects are evaluated based on a benefit/cost ratio.

Amtrak

Amtrak, the National Railroad Passenger Corporation, is the operator of passenger rail on the Corridor. It is authorized to operate a system of passenger rail transportation pursuant to the Federal Rail Passenger Service Act of 1970 for which it receives annual appropriations from the Federal government. Amtrak has seen record ridership, with numbers rising to 28.7 million in fiscal year 2008 accompanied by record ticket revenues of \$2.45 billion.

A section of the act creating Amtrak allowed states to contract with the carrier for additional service beyond what was provided in the basic system. Illinois was first to take advantage of this provision in 1971 with the Illinois Zephyr service to Quincy. It has continued its support of intercity rail service, adding trains in a number of other corridors over the years. Administered by IDOT's Division of Public and Intermodal Transportation, Bureau of Railroads, the program is now second only to California's state-supported passenger rail network. In FY2010, Amtrak expended \$61,181,301 for goods and services in Illinois. In FY 2010 Amtrak employed 1,479 Illinois residents, with total FY 2010 wages of \$89,177,268.²

At the end of October 2006, the State of Illinois increased funding for eight additional trips to the existing state-supported services. The scheduling of the new trains is of particular significance on both the Carbondale and the Quincy corridors. By providing a morning southbound and an evening northbound departure on each route, the state-supported program now allows a one-day trip in either direction. Previously, it was not possible to use the train for a day trip to Carbondale or to Quincy (or to intermediate downstate destinations). With a morning departure at either end of a corridor, the attractiveness of train travel for quick trips is greatly enhanced. The four new trains on the Chicago-St. Louis corridor also increase travel options, providing more frequent departures and greater convenience from both terminals at the start and end of the operating day. The additional departures give travelers an extended day in either Chicago or St. Louis or intermediate destinations. The morning express train from Chicago makes business travel to downstate a viable option. Adding the supplemental

¹ Airports Council International

² Source: Amtrak Illinois Fact Sheet Fiscal Year 2010

tasks described herein will further enhance the marketability and convenience of rail transportation.

Union Pacific Railroad (UPRR)

UPRR owns and operates the vast majority of the Corridor area scheduled for improvement. UPRR is a heavy freight hauling railroad. It leases operating rights to Amtrak for regularly scheduled passenger service. As the owner and operator of the freight rail lines, UPRR performs and also holds or procures specialty contracts for regular and select improvements and maintenance along its railroad. As part of UP's ongoing operations nationally, vendors, material suppliers, consultants and specialty contractors may be signed into service for any work required herein. UPRR is a stable company having been in business for over 100 years. As of December 31, 2009, UPRR had 32,094 route miles over 23 states. It reported operating revenue in 2009 of \$14.1 billion.³

For construction work performed by UPRR and its subcontractors, UPRR will submit invoices to IDOT (through its PMC) for review. IDOT will seek reimbursement from FRA, less the 5% IDOT and local match. UPRR will receive ongoing payment from IDOT for maintaining the improvements subject to this application.

G. Projected Capital Costs

The larger Corridor improvement program to which this application supplements, is estimated to require a total investment (IDOT and FRA) of \$1.202 billion. The total estimated amount for the supplemental tasks is projected at **\$248.5 million**.

1. Total Projected Costs

IL-Chicago-St. Louis Corridor Supplement Program Tasks	Task Cost
Task 1 – Siding and Extended Second Main Track	\$ 102.4 million
Task 2 – Track Upgrades	\$ 76.2 million
Task 3 – PTC	\$ 6.5 million
Task 4 - Private and Farm Crossings	\$ 23.0 million
Task 5 – ROD Study	\$ 0.9 million
Task 6 - Program Management and Construction Administration	\$ 39.5 million
TOTAL	\$ 248.5 million

2. Funding Sources

Out of the \$248.5 million investment, IDOT proposes the following cost share between IDOT and FRA:

	Federal Funding	IDOT Match (25%)	Total Investment
Task 1- Siding and Extended Second Main Track	\$ 76.8 million	\$ 25.6 million	\$ 102.4 million
Task 2 – Track Upgrades	\$ 57.2 million	\$ 19.0 million	\$ 76.2 million
Task 3 – PTC	\$ 4.9 million	\$ 1.6 million	\$ 6.5 million
Task 4 – Private and Farm Crossings	\$ 17.2 million	\$ 5.8 million	\$ 23.0 million
Task 5 – ROD Study	\$ 0.7 million	\$ 0.2 million	\$ 0.9 million
Task 6 – Program Management and Construction Administration	\$ 29.6 million	\$ 9.9 million	\$ 39.5 million
TOTAL	\$ 186.4 million	\$ 62.1 million	\$ 248.5 million

3. Estimating Methodology

Preliminary estimates of total Project costs (design and construction) are \$248.5 million (2011 dollars) and \$281.5 million in year of expenditure (“YOE”) dollars. The YOE dollars for the project are shown in the supporting forms work sheets attached to IDOT’s application for federal assistance. The majority of estimates were provided by UPRR based on a conceptual design. Quantities and costs were estimated based on readily available information and UPRR’s experience with similar projects.

These costs will be refined throughout the final design phase as project details become available. Costs will also be updated during the construction phase as projected costs turn into actual expenditures, and cost escalation (inflation) factors for out-year expenditures become more reliable.

These costs are based on UP’s experience, cost estimating practices and procedures to develop a rough order of magnitude quantity and unit costs for the majority of the work. These costs were reviewed by IDOT and its program manager, Parsons Brinckerhoff. These costs will be refined as the Project moves through the final design and construction, and more information becomes available on unit costs and site conditions.

4. Estimated Expenditures by Task and Year of Expenditure (in YOE dollars)

Task	Description	2011	2012	2013	2014	2015	Total
1	Siding and Extended Second Main Track		\$17.1 m	\$23.2 m	\$34.8 m	\$40.9 m	\$116.0 m
2	Track Upgrades		\$17.0 m	\$17.3 m	\$25.9 m	\$26.1 m	\$86.3 m
3	PTC				\$3.0 m	\$4.4 m	\$7.4 m
4	Private and Farm Crossings				\$10.4 m	\$15.7 m	\$26.1 m
5	ROD Study	\$0.2 m	\$0.2 m	\$0.2 m	\$0.2 m	\$0.2 m	\$1.0 m
6	Program Management and Construction Administration	\$6.5 m	\$7.9 m	\$9.2 m	\$10.3 m	\$10.8 m	\$44.7 m
	TOTAL	\$6.7 m	\$42.2 m	\$49.9 m	\$84.6 m	\$98.1 m	\$281.5 m

H. Operating and Maintenance Estimates

Operations and maintenance costs for the Corridor were reflected in IDOT’s October 2009 funding application. These cost estimates were based on the distance from Chicago to St. Louis rather than what was ultimately financed by FRA (see Grant Cooperative agreement between IDOT and FRA, December 2010). It drew on a variety of sources. Previous estimates by the Midwest Regional Rail Initiative (MWRRI) were reviewed and refined to provide updated input. It was also recognized that UPRR would have responsibility with regard to the on-going maintenance of the HSR corridor and the rail carrier engaged a specialty sub consultant to provide maintenance cost input for the mature corridor. Amtrak experience was also reflected in this process.

Operating revenues were forecast on the basis of anticipated demand for the service, starting from the prior MWRRI work, updated by the consultant team as part of the application process. The forecasting in the application extended only through the tenth full year of operation. To provide the required 20-year projection, the PMC prepared demand and revenue forecasts which extend out to 2035. These projections show that

the Corridor may reach a state where it breaks even, between the 10th and 20th full year of operation. However, note that several simplifying assumptions have been applied to arrive at these results and a relatively crude method for extrapolating the information and are illustrated below. Many factors can change over the next five, let alone 20 years, so a continual review and refinement of ridership, revenues and costs is included in the Corridor development process to ensure that the latest data and most recent trends are reflected as the corridor matures.

Operating and Maintenance Cost Estimates (YOE Dollars)

	1st full year		5th full year		10th full year		20th full year	
	2015	2015 - yoe	2020	2020 - yoe	2025	2025 - yoe	2035	2035 - yoe
Load Factor	52%		57%		61%		70% (?)	
Passenger Transportation Revenue	\$ 28,107	\$ 33,787	\$ 31,120	\$ 44,970	\$ 33,149	\$ 57,583	\$ 38,191	\$ 95,866
Income from credible	\$ 2,518	\$ 3,027	\$ 2,788	\$ 4,029	\$ 2,970	\$ 5,159	\$ 3,422	\$ 8,590
System Revenue	\$ 30,625	\$ 36,814	\$ 33,908	\$ 48,999	\$ 36,119	\$ 62,742	\$ 41,613	\$ 104,456
Maintenance of Way	\$ 8,000	\$ 9,617	\$ 8,000	\$ 11,560	\$ 8,000	\$ 13,897	\$ 8,000	\$ 20,081
Maintenance of Equipment	\$ 8,647	\$ 10,395	\$ 8,647	\$ 12,495	\$ 8,647	\$ 15,021	\$ 8,647	\$ 21,705
Transportation	\$ 14,307	\$ 17,198	\$ 14,718	\$ 21,268	\$ 15,179	\$ 26,367	\$ 16,051	\$ 40,291
Sales/Marketing	\$ 3,603	\$ 4,331	\$ 2,692	\$ 3,890	\$ 2,758	\$ 4,791	\$ 1,913	\$ 4,802
Stations	\$ 4,227	\$ 5,081	\$ 3,126	\$ 4,517	\$ 2,929	\$ 5,088	\$ 1,631	\$ 4,094
Security		\$ -		\$ -		\$ -	\$ -	\$ -
General and Admin	\$ 2,798	\$ 3,363	\$ 3,511	\$ 5,074	\$ 3,865	\$ 6,714	\$ 4,932	\$ 12,380
Operating Surplus/(Deficit)	\$ (10,957)	\$ (13,171)	\$ (6,786)	\$ (9,805)	\$ (5,259)	\$ (9,136)	\$ 439	\$ 1,103

Another key factor which enters into the 20-year projection of costs and revenues is the periodic overhaul and upgrade of the rolling stock and facilities to ensure that they continue to present an inviting and modern appearance. In the absence of selection of specific products for the HSR cars and diesel locomotives, little can be done in the way of estimating overhaul requirements and costs. These will be estimated and included in the refined operating and maintenance cost model once the specifics of the rolling stock are known.

Maintenance Cost Estimate

UPRR is currently investigating similar subdivisions with comparable freight tonnages running at Class 4 service. As these costs are accumulated and reviewed by the stakeholders, the baseline for UPRR's commitment will be established within the Corridor. It is possible that UPRR's financial obligations to maintain the infrastructure will act as an incentive for UPRR to maximize its return on investment by increasing its freight service along the Corridor. Increased freight traffic may conflict with passenger schedule performance. These scenarios will be examined once baseline costs are established by UPRR and verified by the stakeholders. The key will be in presenting actual measured-mile type costs.

IDOT and UPRR are currently negotiating a maintenance agreement for the 2A Improvements (those subject to the 2010 and 2011 construction agreements between the parties, dated July 16, 2010 and March 4, 2011, respectively). The agreement will finalize the maintenance cost details. The maintenance agreement will be amended upon award of additional FRA funding, if necessary, to reflect the supplemental Corridor work. The maintenance cost participation by the parties will be based on an incremental maintenance approach. UPRR will be responsible for the costs associated with maintaining the track to FRA Class 4 standards. IDOT will pay the additional maintenance costs to maintain the track to FRA Class 6 standards. The parties are negotiating a cost allocation methodology where their respective costs will be derived from a formula including volume variable elements (such as forecasted ton miles and

train miles) and other variable elements. A final maintenance agreement between IDOT and UPRR will be completed shortly.

I. Capital Funding Sources

1. IDOT

IDOT has the authority to accept funds granted by the Federal Railroad Administration (FRA) and to expend those funds. IDOT has previously received funds from the U. S. Department of Transportation (US DOT) and the FRA. This Project will be financed by a combination of Federal funds and dedicated State funds. The State agrees to provide 25% of the total Project cost. The provision of these funds will not impact any other proposed IDOT project.

On July 13, 2009, a \$31 billion State capital bill, ***"Illinois Jobs Now!"*** was signed into law. This bill includes a commitment of \$400 million for high-speed rail, \$150 million for conventional intercity passenger rail, and \$322 million for the CREATE program. Funding for the ***Illinois Jobs Now!*** will be provided by issuing 20-year bonds financed by various fee increases for Secretary of State Services (certificate of title fees, transfer of registration fees, passenger and truck B registration fees, driver's license fees, and fines for overweight trucks), tax revenue enhancements (sales tax on candy, sales tax on sweetened tea, coffee, grooming and hygiene products, and volume tax on wine, spirits, and certain beer products), and video gaming terminals. The State's FY2011 (July 1, 2010 to June 30, 2011) Capital Budget contains a \$400 million appropriation for Statewide High Speed Rail projects. The FY2011 Capital Budget and Capital Projects List can be viewed and/or downloaded at the following website:

<http://www.state.il.us/budget/>

Through September 14, 2010 the State has released 27.0% (\$108,112,722) of the \$400 million appropriation established in the FY2011 Capital Budget. The remaining \$291,887,278 high speed rail appropriation will be released incrementally to meet the funding needs of the Corridor Improvement Program. IDOT's capacity under the fund far exceed the 5% minimum match obligation of approximately \$58 million. Additionally, the state has a process for bridging costs associated with the capital improvements while IDOT requests reimbursements from FRA or local municipalities.

State High Speed Rail Capital Funding

Description	Date	Funding	Obligations
FY 2011 Capital Budget Appropriation	Mar 10,2010	\$ 400,000,000	
State OMB Release No. 5748	May 06, 2010		\$ 9,800,000
State OMB Release No. 6347	Sep 14, 2010		\$ 98,312,722
Remaining Appropriation		\$ 291,887,278	

The State's Capital Budget is a spending blueprint identifying capital projects that generate assets with a long economic life, such as roads and bridges, transit facilities, schools, economic development projects, environmental infrastructure, energy programs and state facilities. While the State's operating budget provides annual funding for the day-to-day services, programs, and operations of the State, the Capital Budget provides funding for projects requiring multi-year appropriations.

Capital appropriations are made up of new appropriations for capital projects that will be initiated starting in a specific fiscal year but may require two or more years to complete, and re-appropriations of projects and programs first appropriated in prior years and not yet completed. The \$400 million high speed rail appropriations were first appropriated in FY 2010 and then re-appropriated in the FY 2011 Capital Budget.

Additionally, financial and investment rating services and firms continue to confirm Illinois' relatively sound financial rating. The State's special obligation bond ratings did not change during FY 2009. As evidence of the project backing financial health, Illinois' bond rating on special obligation – Build Illinois Bonds from Moody's Investor Services, Standard and Poors, and Fitch Ratings remained at Aa3, AAA and AA, respectively. Since June 30, 2009, Moody's Investor Services lowered the State's special obligation bond rating for Build Illinois Bonds to A1 and Fitch recalibrated its rating to AA+.

Note, while Illinois has experienced significant financial difficulties during the recent recession, those financial difficulties have not impaired the State's financial wherewithal to meet the funding requirements of the Corridor Improvement Program. Because the Program funding is primarily financed through the **Illinois Jobs Now!** capital program it is not reliant on the State's General Fund.

IDOT agrees to accept responsibility for any capital cost overruns if they occur and has other sources of funds to cover these costs overruns.

2. Other Funding Sources – the Union Pacific Railroad will provide \$15.7 million in cash and another \$4 million in-kind, for a total contribution of \$19.7 million. The in-kind contribution consists of right-of-way, which Union Pacific will provide at no additional cost to the project.

J. Program Operation and Maintenance Funding

Multiple agreements are required for the successful on-going conduct of operations and maintenance on the Corridor, including the supplemental improvements. These include a maintenance agreement (between IDOT and UPRR) and the operating agreement (between IDOT and Amtrak). The latter agreement will also cover rolling stock maintenance. An agreement with Amtrak is also expected. Facilities maintenance relating to stations and other passenger facilities will depend on the owner of the station. The current situation on the Corridor is that two of the six stations are privately owned, while UPRR owns two and Amtrak owns one. An agreement with each of the station owners is required to cover the on-going operations and maintenance of these facilities. In addition, at least one station is subject to change location, compounding the agreement process. These agreements will be established in a timely manner.

It is presumed that all agreements will have a 20-year term, with provisions for periodic review and adjustment of costs as necessary to reflect changing or unanticipated conditions. All agreements will specify financial responsibility and will have provision for the negotiations and mutual agreement process with regard to cost overruns and/or conditions where maintenance or operating standards are not being met (requiring the specification of the base standards to which the parties agree), as well as where the level of attention exceeds what is required to meet the base standards. The process for making adjustments to payments in the event of either of the over- or under-maintenance condition will be specified in the agreement. The unique nature of these new relationships with High Speed Rail will allow an opportunity to be creative in creating solutions to some very complex issues.

State funds that are appropriated to IDOT by the General Assembly for highways and bridges come from the Road Fund, the State Construction Fund, and Series A Bond Funds. State funds that are appropriated to IDOT by the General Assembly for transit, airports and rail come from the General Revenue Fund (GRF), Series B Bond Fund, Public Transportation Fund, Downstate Public Transportation Fund, Metro East Public Transportation Fund, Federal Mass Transit Fund, Federal Airport Fund, Federal Rail Freight Fund, State Rail Freight Fund and High Speed Rail Fund. Revenue for the General Revenue Fund is derived from all of the tax and fee sources that feed into that fund. The various public transportation funds are funded through GRF transfers. The Federal funds are funded from Federal sources. The table set forth below provides a summary of recent State appropriations to IDOT.

State Budget Appropriations to IDOT

Fund Category	Appropriations (\$Thousands)		
	FY 2010 Actual	FY 2011 Enacted	FY 2012 Recommended
General Funds	\$78,041.6	\$79,034.6	\$11,471.6
Other State Funds	\$2,430,253.0	\$2,469,788.5	\$2,662,503.8
Federal Funds	\$2,873.1	\$3,969.2	\$4,191.7
TOTAL	\$2,512,167.7	\$2,552,792.3	\$2,678,167.1
	Actual	Estimated	Recommended
Headcount (FTE)	\$5,201	5,771	5,861

Passenger rail service in Illinois is strongly supported. In fact, this includes the oldest State-supported service since Amtrak's 1971 inception. In 2005, ridership increased by 11 percent on all routes supported by the State. Recognizing the increased demand for the service, Illinois increased state funding from \$12 million in FY 2006 to \$24 million in FY 2007. Enacted appropriations of State support for Amtrak in both 2009 and 2010 was \$28 million.⁴ The enacted appropriation for 2011 is \$26 million. This additional funding allowed Illinois to triple the number of state-supported trains on the Chicago-St. Louis route (now with three Lincoln Service trains), double the state-supported trains from one to two for service on the Chicago-Carbondale (Illini and Saluki) and Chicago-Quincy (Illinois Zephyr and Carl Sandburg) routes, and expanded daily service between Chicago and the downstate communities of Springfield, Quincy and Carbondale. In addition, this increase in funding has allowed the state to increase the share of support it provides to the Chicago-Milwaukee "Hiawatha Service," which provides seven daily trains and is also supported by the Wisconsin Department of Transportation. Funds come from IDOT general revenue. Based on the IDOT-Amtrak agreement, Amtrak is responsible to operate the passenger service and provide equipment, while Union Pacific and other railroad owners provide maintenance. Moneys flow from IDOT to Amtrak, and from Amtrak to the owning railroads per various Amtrak-freight railroad agreements.

⁴Source: Illinois Department of Transportation, Executive Budget for 2011

With regard to the overall stability of the service and related infrastructure, the Chicago – St. Louis rail corridor has been in continuous operations for more than 150 years. Union Pacific has been the owner of the majority of the route for 14 years. Amtrak has been the service provider since 1971. Frequencies have fluctuated periodically, but the recent trend is growing. For example, in 2006, the State contracted for two additional round trips on the Corridor as well as on other routes.

Responding to several years of steadily increasing demand for trail passenger service, Illinois increased state funding from \$12 million in FY 2006 to \$24 million in FY 2007. Program appropriations rose to \$28 million in both 2009 and 2010 and \$26 million for 2011. The additional funding allowed Illinois to add two State-supported trains on the Chicago-St. Louis route (with three Lincoln Service trains funded by the State), one on the Chicago-Carbondale corridor and one on the Chicago–Quincy route, in addition to increasing its level of support for the Chicago-Milwaukee “Hiawatha Service,” (seven daily trains) also supported by the Wisconsin Department of Transportation. These investments yielded substantial ridership increases on all corridors:

- On the Chicago – St. Louis Corridor, ridership rose 55.8% the first year, 16.5% from 2007 to 2008, 6.3% from 2008 to 2009 ⁵ and, 13.1% from 2009 to 2010.
- On the Chicago-Carbondale route, ridership rose 41.4% the first year, 18.5% from 2007 to 2008, and 2% from 2009 to 2010.
- On the Chicago-Quincy route, ridership rose the first year 41.4% in 2007, 19.8% from 2007 to 2008, and 3.4% from FY 2009 to FY 2010.
- On the Chicago-Milwaukee corridor, ridership grew 2.6% in 2007, 25.9% from 2007 to 2008, and 6.1% from 2009 to 2010.

Another element of IDOT’s efforts to support freight and passenger rail service is the Chicago Region Environmental and Transportation Efficiency (CREATE) program. CREATE is a partnership between the state of Illinois, the city of Chicago, and six major national freight rail carriers (BNSF Railway, Canadian Pacific Railway, CN, CSX Transportation, Norfolk Southern Corporation, and Union Pacific Railroad). The CREATE program will invest an estimated \$1.5 billion in capital projects to improve transportation efficiency in the region. The freight program provides grants and low interest financing to capital rail projects that benefit economic development in Illinois. Projects are evaluated based on a benefit/cost ratio.

K. Risks and Mitigation

IDOT's PMC has developed and implemented an initial risk management plan for the Corridor program which will be revised if necessary for the work subject to this application. The risk management plan incorporates recognized risk assessment and management principles that are designed to accomplish the following goals:

- Identify any significant risks that could potentially impact the successful completion of the Program,
- Establish program-wide procedures to evaluate and measure the potential impact(s) of identified risks,
- Assure the development and adoption of appropriate risk treatment alternatives (i.e., avoidance, prevention, risk mitigation/cost control, etc.), and
- Establish appropriate tracking mechanisms to monitor and evaluate the impact of adopted risk treatment alternatives.

The risk register is attached to this Financial Plan.

This risk register will be expanded by the PMC. The PMC will conduct periodic meetings to reassess risks and perform maintenance of the risk register. A responsible party will be assigned to each risk to implement the selected risk mitigation strategy to decrease the probability and/or severity of previously identified risks, ultimately reducing the potentially damaging effect on the program's objectives.

Capital Revenue Risk Identification

The key assumption for the services described in this Plan is that funding will continue to be available through the FRA's HSIPR Program. As discussed in the Financing and Revenues Section above, the State has provided the necessary funding in the FY2011 Illinois Capital Budget which meets and exceeds the 5% matching funds requirement.

Operations and Maintenance Revenue Risk Identification

Additionally, the key assumption for the operational and maintenance long term health is the record of 40 years of participation by the State of Illinois through IDOT in the ongoing subsidies in passenger rail services specifically within the corridor through the State of Illinois General Revenue Bonds. As the current operator of the passenger service for IDOT and the Texas Eagle, Amtrak's participation cannot be under estimated and as the service development plan is finalized, 5, 10 and 20 year forecast costs, risks and plans will be integrated into this Financial Plan.

Cost Risk Identification

Potential unforeseen events that may occur throughout the life of the Project include:

- Changed environmental and track conditions
- Changes in design concepts
- Changes in design specifications
- Changes in government rules and regulations
- Increased scope of mitigation
- Litigation
- Major shift in inflation cost increase factor and bid costs
- Material delays, labor disputes, and material costs
- New technology

- Unanticipated federal or state budget changes
- Weather delays

IDOT will perform a risk analysis of the Project in order to identify project risks, especially those pertinent to IDOT functions. It will also perform systematic risk assessments throughout the project development at significant milestones.

System Safety Planning Documentation

Draft System Safety Program Plan Outline (upload #40)

Draft System Safety Program Plan Outline

This draft System Safety Program Plan (SSPP) Outline is based on the Code of Federal Regulation's Rail Fixed Guideway System; State Safety Oversight, 49 CFR Part 659.19.

1. Policy Statement and Authority for SSPP

A policy statement signed by the High-Speed Rail (HSR) program's chief executive that endorses the safety program and describes the authority that establishes the SSPP.

2. Goals and Objectives

A clear definition of the goals and objectives for the HSR safety program and stated management responsibilities to ensure that they are achieved.

3. Overview of Management Structure

An overview of the management structure of the HSR program, including: (i) an organization chart; (ii) a description of how the safety function is integrated into the rest of the organization; and (iii) clear identification of the lines of authority used by the HSR program to manage safety issues.

4. SSPP Control and Update Procedure

The process used to control changes to the SSPP, including: (i) specifying an annual assessment of whether the SSPP should be updated; and (ii) required coordination with the oversight agency, including timeframes for submission, revision and approval.

5. SSPP Implementation Activities and Responsibilities

A description of specific activities required to implement the system safety program, including: (i) tasks to be performed by HSR program safety function, by position and management accountability, specified in matrices and/or narrative format; and (ii) safety-related tasks to be performed by other HSR program departments, by position and management accountability, specified in matrices and/or narrative format.

6. Hazard Management Process

A description of the process used by the HSR program to implement its hazard management program, including activities for: (i) hazard identification; (ii) hazard investigation, evaluation and analysis; (iii) hazard control and elimination; (iv) hazard tracking; and (v) requirements for on-going reporting to the oversight agency regarding hazard management activities and status.

7. System Modification

A description of the process used by the HSR program to ensure that safety concerns are addressed in modifications to existing systems, rolling stock, and equipment, which do not require formal certification but which may have safety impacts.

8. Safety Certification

A description of the safety certification process required by the HSR program to ensure that safety concerns and hazards are adequately addressed prior to the initiation of passenger operations and subsequent major projects to extend, rehabilitate, or modify an existing system, or to replace rolling stock and equipment.

9. Safety Data Collection and Analysis

A description of the process used to collect, maintain, analyze, and distribute safety data, to ensure that the safety function within the HSR program receives the information necessary to support implementation of the system safety program.

10. Accident/ Incident Investigations

A description of the process used by the HSR program to perform incident notification, investigation and reporting, including: (i) notification thresholds for internal and external organizations; (ii) investigation process and references to procedures; (iii) the process used to develop, implement and track corrective actions that address investigation findings; (iv) reporting to internal and external organizations; and (v) coordination with the oversight agency.

11. Emergency Management Program

A description of the process used to develop an approved, coordinated schedule for emergency management program activities, which include: (i) meetings with external agencies; (ii) emergency planning responsibilities and requirements; (iii) process used to evaluate emergency preparedness, such as annual emergency field exercises; (iv) after action reports and implementation of findings; (v) revision and distribution of emergency response procedures; (vi) familiarization training for public safety organizations; and (vii) employee training.

12. Internal Safety Audits

A description of the process used to ensure that planned and scheduled internal safety audits are performed to evaluate compliance with the SSPP, including: (i) identification of departments and functions subject to review; (ii) responsibility for scheduling reviews; (iii) process for conducting reviews, including the development of checklists and procedures and issuing of findings; (iv) review of reporting requirements; (v) tracking the status of implemented recommendations; and (vi) coordination with the oversight agency.

13. Rules Compliance

A description of the process used by the HSR program to develop, maintain, and ensure compliance with rules and procedures having a safety impact, including: (i) identification of operating and maintenance rules and procedures subject to review; (ii) techniques used to assess the implementation of operating and maintenance rules and procedures by employees, such as performance testing; (iii) techniques used to assess the effectiveness of supervision relating to the implementation of operating and maintenance

rules; and (iv) process for documenting results and incorporating them into the hazard management program.

14. Facilities and Equipment Inspections

A description of the process used for facilities and equipment safety inspections, including: (i) identification of facilities and equipment subject to regular safety-related inspection and testing; (ii) techniques used to conduct inspections and testing; (iii) inspection schedules and procedures; and (iv) description of how results are entered into the hazard management process.

15. Maintenance Audits and Inspections

A description of the maintenance audits and inspections program including identification of the affected facilities and equipment, maintenance cycles, documentation required, and the process for integrating identified problems into the hazard management process.

16. Training and Certification Program for Employees and Contractors

A description of the training and certification program for employees and contractors, including: (i) categories of safety-related work requiring training and certification; (ii) a description of the training and certification program for employees and contractors in safety-related positions; (iii) process used to maintain and access employee and contractor training records; and (iv) process used to assess compliance with training and certification requirements.

17. Configuration Management and Control

A description of the configuration management control process, including: (i) the authority to make configuration changes, (ii) process for making changes, and (iii) assurances necessary for all involved departments to be formally notified.

18. Local, State, and Federal Requirements

A description of the safety program for employees and contractors that incorporates the applicable local, state, and federal requirements, including: (i) safety requirements that employees and contractors must follow when working on, or in close proximity to, active railroad tracks/property; and (ii) process for ensuring the employees and contractors know and follow the requirements.

19. Hazardous Materials Program

A description of the hazardous materials program including the process used to ensure knowledge of and compliance with the program requirements.

20. Drug and Alcohol Program

A description of the drug and alcohol program and the process used to ensure knowledge of and compliance with program requirements.

21. Procurement Process

A description of the measures, controls, and assurances in place to ensure that safety principles, requirements and representatives are included in the HSR program procurement process.

Railroad and Project sponsor Agreements:

Union Pacific Railroad Support Letter (upload #41)

April 1, 2011

Mr. George Weber
Bureau Chief, Railroads
Illinois Department of Transportation
James R Thompson Center
Suite 6-600
100 W. Randolph Street
Chicago, IL 60601

Dear George

This has reference to IDOT's proposed application for Federal funding to cover additional projects on the Chicago – St. Louis High Speed Rail (HSR) route.

Union Pacific Railroad (UPRR) will contribute \$17.7 million (including \$4 million in Real Estate) in support of the proposed 1A project. This project includes signal and track improvements at Joliet UD Tower, extended 2nd Main Track from S. Joliet to Elwood, IL, the Mazonia North Siding near Braidwood, IL and CTC between Joliet and Mazonia. UPRR also supports IDOT's application for funding of additional improvements to the route between Joliet and Dwight, IL that will allow 110mph passenger operation (the 1B project), including installation of PTC and other safety improvements. UPRR's commitment is subject to satisfactory negotiation of required agreements with IDOT, subsequent approval by the FRA, and execution of a force account agreement in a form acceptable to the railroad.

Modeling conducted by UPRR's Network Planning group indicates that these projects will allow an additional 9 minute reduction in overall weighted average HSR passenger train schedules between Joliet and Dwight and a 5 point improvement in overall corridor On Time Performance between Chicago and St. Louis for HSR trains.

We are pleased to be able to offer this letter of support.

Yours very truly,

A handwritten signature in blue ink, appearing to read "John H. Rebensdorf", with a long, sweeping horizontal line extending to the right.

John H. Rebensdorf
VP Network Planning & Operations

Railroad and Project sponsor Agreements:

Amtrak Support Letter (upload #42)

March 31, 2011

Mr. George Weber
Acting Deputy Director
Illinois Department of Transportation
100 West Randolph Street, 6-600
Chicago, IL 60601

Dear Mr. Weber:

The National Railroad Passenger Corporation (Amtrak) would like to take this opportunity to express its support for Illinois' High Speed Intercity Passenger Rail (HSIPR) grant application submitted in response to the March 16, 2011 Federal Register Notice issued by the Federal Railroad Administration (FRA) for the project listed below. This Notice announced the redistribution of funds authorized and/or appropriated in three pieces of legislation: the Passenger Rail Investment and Improvement Act of 2008 (PRIIA), the American Recovery and Reinvestment Act of 2009 (ARRA) and the Fiscal Year 2010 Consolidated Appropriations Act.

Amtrak's support relates to the following project:

Chicago-St. Louis Corridor -

- A) Various infrastructure improvements between Joliet and Dwight, including adding 7 miles of second main track between Joliet and Elwood; the construction of a new siding at Braidwood; upgrading of trackage to FRA Class 6; and installing PTC.
- B) Between Joliet and Alton, upgrading various private grade crossings with 4-quadrant gates.

This project upon completion will improve intercity passenger rail service and benefit the Amtrak system. Based on the information made available to us regarding the project's eligibility, and subject to the development of such project-specific agreements as FRA may require, we support its selection for grant funding and ultimate implementation.

The advancement of projects like this will help develop high-speed and quality intercity passenger rail service in the United States. We appreciate your leadership in filing this application and look forward to a favorable decision.

Sincerely,

A handwritten signature in blue ink, reading "Michael W. Franke".

Michael W. Franke
Assistant Vice President, Policy and Development (Central Region)

Railroad and Project sponsor Agreements:

Eight State MOU (upload #43)

MEMORANDUM OF UNDERSTANDING

Involving

State of Illinois,

State of Indiana,

State of Iowa,

State of Michigan,

State of Minnesota,

State of Missouri,

State of Ohio,

State of Wisconsin, and

City of Chicago

For

The Implementation of High-Speed Rail Passenger Service and Connections

Involving Corridors Linking Cities in their Respective States

This Memorandum of Understanding (MOU) is entered into this 27th day of July, 2009, by the Governors in eight Midwestern states, including Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio and Wisconsin, and the Mayor of the City of Chicago (MOU Participants) for the purpose of coordinating and documenting individual applications to the Federal Railroad Administration (FRA) for funding from the American Recovery and Reinvestment Act of 2009 (ARRA) to develop the Chicago Hub High-Speed Rail Corridor (Midwest corridor). The Midwest corridor will connect cities throughout the Midwest with frequent and reliable high-speed and conventional intercity rail service, and will provide service connections to adjoining regional corridors.

This MOU establishes MOU Participants' respective roles and responsibilities in implementing actions relating to the establishment of high-speed and conventional Intercity rail passenger service. This rail service is to be operated along corridors established as part of the Midwest Regional Rail Initiative (MWRRRI), a collaborative effort by managers and directors of Midwestern State transportation agencies, established in 1996, to plan the rail priorities of the region. This MOU also recognizes Chicago as the hub of Midwestern rail operations, which is consistent with plans outlined in the FRA's "Vision for High-Speed Rail in America" and the regional vision for a Midwest corridor. This MOU further recognizes the importance of adjoining and complementary corridors not specifically recognized in the MWRRRI plan, for purposes of connecting and providing service to all parts of the nation.

WHEREAS, the Chicago Hub is the center of our country's rail transportation network and includes regional intercity/interstate passenger rail corridors serving the multistate Midwestern region with corridor connections to the East Coast, to the West Coast, to the Gulf Coast and to Canada.

WHEREAS, the Midwest Regional Rail Initiative (MWRRRI) and the Ohio and Lake Erie Regional Rail (Ohio Corridor), are collaborative efforts established to plan the rail priorities of the multistate Midwest region.

WHEREAS, all MOU Participants agree upon, support and understand the national and Midwest regional priority and importance of a nationwide network including a Chicago Hub that could host trains traveling up to 110 miles per hour serving major cities and mid-sized cities across the region, along with connections to adjoining regional corridors, as envisioned and outlined by President Obama and U.S. Transportation Secretary LaHood.

WHEREAS, the Congress of the United States has made available to the various states a total of \$8 billion in funds through ARRA for the purpose of funding the Passenger Rail Investment and Improvement Act of 2008 (PRIIA) to establish and improve high-speed passenger rail service throughout the nation.

WHEREAS, all participating states, in partnership with the FRA, agree to advocate for additional appropriations through Congress, in support of these collaborative efforts.

WHEREAS, all MOU Participants agree upon and support a regional and national vision for developing a high-speed and conventional rail network across the Midwest that will provide expanded and ongoing service opportunities throughout the region, with connections to corridors across the nation.

WHEREAS, all MOU Participants recognize a priority to establish high-speed rail service from the Chicago Hub to corridors consisting of Chicago-St. Louis, Chicago to Milwaukee-Madison, and Chicago to Detroit-Pontiac, that would form a high-speed hub in the heart of the nation with high-speed and conventional passenger train service connections radiating to seven other Midwestern states and beyond:

- Connecting to the East by way of Indiana with the Ohio network and service to Toledo and the 3C Corridor: Cleveland-Columbus-Dayton-Cincinnati;
- Connecting to the Southeast to Indianapolis, Indiana and Cincinnati, Ohio;
- Connecting to the Northeast to Grand Rapids/Holland and Port Huron, Michigan;
- Connecting to the North to Green Bay, Wisconsin;
- Connecting to the Northwest to the Twin Cities of Minnesota;
- Connecting to the Southwest and West through St. Louis to Kansas City, Missouri;
- Connecting to the South to Carbondale, Illinois;
- Connecting to the West to Quad Cities, Ill.-Iowa City, Iowa-Des Moines, Iowa-Omaha, Neb.; and to Quincy, Illinois.

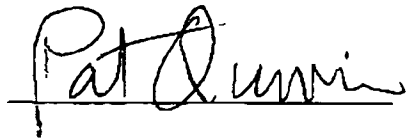

NOW, THEREFORE, be it resolved that the Governors and the Mayor of Chicago agree they will:

- Establish a high-level, multi-state steering group with a representative from each signatory to this MOU. The purpose of the Midwest Rail Steering Group will be to coordinate the region's applications and work associated with all ARRA application to provide guidance, leadership and a single advocacy voice in support of the region's collective high-speed rail priorities. The Steering Group shall identify a point of contact between MOU Participants and the U.S. Department of Transportation.
- Coordinate and cooperate fully in support of each MOU Participant's individual state applications for high-speed and intercity rail funding.
- Coordinate and negotiate with the major railroads to sign agreements for the development of high-speed rail corridors, and the identified individual projects by stated priority.
- Be free to pursue individual memoranda of agreement or understanding among MOU Participants, related to specific projects involved in support of the overall application and vision for the Midwest corridor.
- Be separately responsible for any and all work taking place within their respective state boundaries.
- Allow other Midwestern or contiguous states the opportunity to join in this MOU at any time if they are willing to support all aspects of the agreement in place.

BE IT FURTHER RESOLVED THAT the parties may mutually agree in writing to amend this MOU and to develop such additional provisions and procedures as they determine to be necessary in order to pursue the development of high-speed and conventional intercity passenger rail service.

AND, FINALLY, BE IT RESOLVED THAT in signing this MOU, the undersigned understand and accept the roles and responsibilities assigned to each of the parties. Each of the parties agrees to cooperate to the maximum extent possible to ensure that the project is developed in full compliance with Federal and State requirements and to ensure that there is maximum communication and minimum duplication of effort.

April 4, 2011

Mr. George Weber
Acting Deputy Director
Illinois Department of Transportation
JRTC – STE 6-600
100 W. Randolph
Chicago, IL 60601

Dear Mr. Weber:

I am writing regarding the High-Speed Intercity Passenger Rail Program's Notice of Funding Availability recently announced by the Federal Railroad Administration for applications due April 4, 2011. The Illinois Department of Transportation's pursuit of a rail corridor improvement project on the Lincoln Service from Joliet, IL, to Dwight, IL, is a critical step in modernizing the rail industry. This project is estimated to improve on-time performance and reduce travel time by approximately nine minutes.

These kind of rail improvements help us all enhance our services as we partner with neighboring states to reach our ultimate goal of providing safe, efficient rail transportation for both passengers and freight, and will ultimately benefit our Missouri River Route in Missouri as well, when passengers ride both routes. This will also help increase the burgeoning numbers of people going to our new station in St. Louis.

This rail project is also critical to our states' creation and support of jobs, that in turn deliver both economic and transportation benefits. The long-term plan for high-speed rail in the Midwest is built on a ready-to-go plan. Funding is the next step.

We can positively affect the lives of many Americans, the environment and the economy by joining forces to make a positive difference. We offer our neighborly support as together we create seamless and efficient connections between Missouri, Illinois and many other states.

Sincerely,

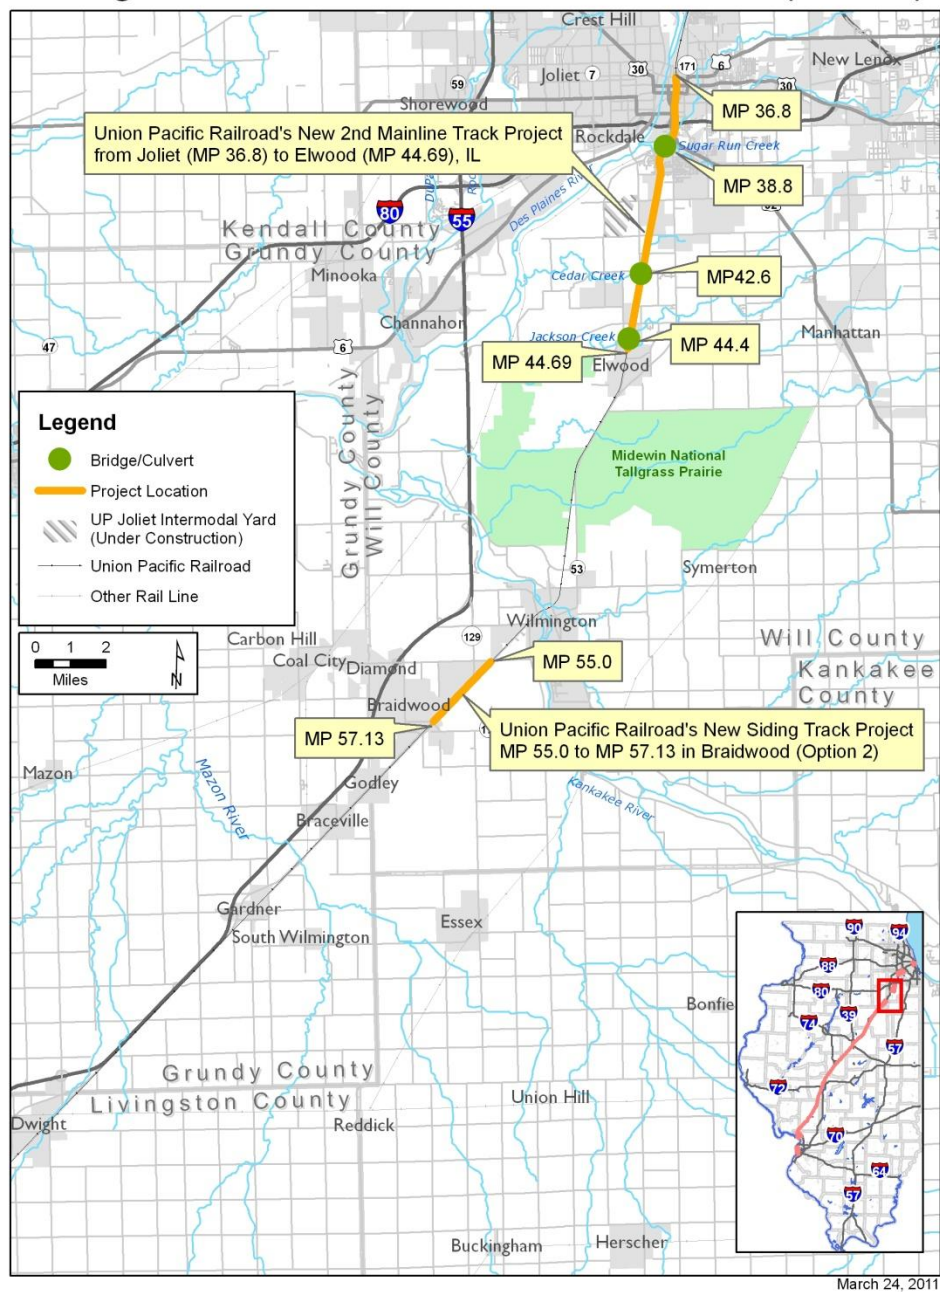

Brian Weiler
Multimodal Operations Director
